EXECUTIVE SUMMARY

North Eastern Region Power Supply Improvement Project (NERPSIP) is a World Bank funded project aimed at improving the impoverished power transmission and distribution system in the North Eastern states of India with Power Grid Corporation of India Ltd. (POWERGRID), the single transmission utility of the country as the implementing agency (IA). The present Final Environmental Assessment Report (FEAR) is for the transmission and distribution system in Bishnupur, Churachandpur, Imphal East, Imphal West, Jiribam, Kakching, Kamjong, Noney, Senapati, Thoubal and Ukhrul Districts and has been undertaken to verify the actual locational details of the project elements, to report any impacts on the biodiversity and protected area and the project affected people, and to assess the compliance of the Initial Environmental Assessment Report (IEAR) / Environment Management Plan (EMP) prepared and submitted by the IA for the instant project. The elements of the present project include three 132 kV transmission lines of 167.338 km, bay extension of four transmission sub-stations, five 33 kV distribution lines of 62.934 km, construction of five new distribution sub-stations and augmentation/bay extension of fourteen distribution sub-stations.

The topography of the districts is mainly plain as well as hilly. About 75% of the landscape has a forest cover mostly in the hilly terrain, and the rest 25% is constituted by jhum land, agricultural fields, settlements etc. Most of the land is privately owned and some are under the jurisdiction of the Village Council.

The final layout of transmission lines has been carefully selected from three given options. The alignment has successfully avoided all reserve forests, protected areas, all ecological and social sensitive areas such as protected areas, sacred groves, community conserved areas, important bird areas, wetlands, settlements, common property resources, etc. The land use along the RoW (27 m for 132 kV) of lines comprises of agricultural land, private plantation and govt. land. Since stringing of 2nd circuit and renovation activities are undertaken in the existing three transmission lines in the instant subproject therefore, there is no change in the length of the line. Hence, there is no change in the environmental footprints and impacts as envisaged in IEAR.

The distribution lines too have been aligned mostly along the existing roads and by avoiding dense forest areas. Here, the RoW corridor being narrower

(15m) will further reduce the necessity of tree felling. Much of the line would only need lopping of branches for unhindered passage. The land use along the RoW of lines comprises of agricultural land, private plantation and govt. land. The original length of the line has been increased to 62.934 km from earlier 48.80 km due to change in routes and further optimization during ground truthing survey. Considering that distribution line has environmental footprints and without any change in land use and other base line data, no additional impacts of any kind apart from earlier identified impacts in IEAR/EMP are anticipated. A total of around 1161 poles are being/to be erected for the proposed finalized distribution lines.

Sub-station locations are based on environment and social aspects and technical requirement. Various site-specific parameters that include availability of infrastructure facilities such as access roads, water, distance from railheads, type of land (Government/ revenue/private land); social impacts such as number of families getting affected; CPR including feasibility of acquisition were considered for analysis. The social aspects are provided due weightage after technical requirement in decision making for selection/finalization of land for substation. In the instant case land for all the proposed substations are either in possession of MSPCL or identified for purchase on willing seller—willing buyer basis.

Impacts due to project have been analyzed for all the phases of project i.e. during design, construction and operation. Since, no involuntary acquisition was involved and fresh lands were secured only through private purchase there is no R & R and resettlement issues. Due to electricity supply, land value is expected to increase, therefore, possibility of land value depreciation is not envisaged. Final routes of lines and sites for construction of new sub-stations don't involve any monuments of historical or cultural significance. Since forest area covered under Forest (Conservation) Act, 1980 has been completely avoided with careful selection of route alignment, therefore, provisions of the Forest (Conservation) Act, 1980 shall not prevail. However, in case of felling of trees in non-designated forest areas MSPCL/IA shall provide fund for compensation. As per existing law, land for tower/pole & right of way is not acquired and ownership of land remains with the owner and agricultural activities are allowed to continue after construction activity. However, as per existing laws compensation for all damages (tree/crop) are paid to the individual land owner. GoMan adopted the MoP guidelines dated 15th October 2015 for land compensation for tower footing and RoW Corridor on 28th March 2018 which provide payment of @ 85% and @ 15% of land value towards compensation for land coming under tower base and line corridor respectively. Further, as per said guidelines land compensation provisions is

only applicable to new or ongoing transmission lines and shall not be applicable in case of existing line, stringing of 2nd circuit, reconductoring/re stringing, repairing, construction of existing towers etc. Execution of the projects covered in this report has not resulted in any steep rise in traffic volume. The project does not require availing clearances from Department of Railways, Department of Telecommunications, and the Ministry of Aviation. Further, the present project requires very less vehicular movement and that too restricted to construction period only. Hence, neither any interference with other utility nor steep rise in traffic volume is anticipated/ observed. The lines proposed under this scheme don't involve any tower/ pole to be placed in river bed which could interfere with existing drainage patterns. In substations, all drainage channels along or inside substations are being trained and connected to main or existing drainage to avoid any erosion due to uncontrolled flow of water.

Detailed specification with respect to equipment design and substation drainage and sewage design has been included in tender document to avoid any incidence of land and water contamination. Adequate safety measures are in place to avoid any potential fire/ explosion hazard. All the soil excavated for tower/pole footings and substations construction are optimally utilized for backfilling and the remaining soil being spread evenly and compacted. Top soil disturbed during the development of sites are used to restore the surface of the platform. Infertile and rocky material are dumped at carefully selected dumping areas and used as fill for substation/ and tower/pole foundations. Hence, possibility of erosion of exposed area due to construction activity is negligible. To contain the noise level within the permissible limits, measures like providing sound and vibration dampers and rectification of equipment are undertaken. In addition, plantations of sound absorbing species like Casuarinas, Tamarind, and Neem are raised at the substations that reduce the sound level appreciably. The proposed lines are not passing through any forest area, wildlife area. Since there is no protected area or demarcated/ documented migration path of wildlife like elephant corridor existing near to subproject locations, hence, possibility of any disturbance to wildlife is not imminent. No bird migration/fly path found in project area.

Almost all the tower/ pole are in plain area, therefore, there was no impact due to the silt runoff. In case of distribution lines all the excavated soil is backfilled and compacted immediately after erection of tubular poles. In case of sub-station, existing one are located on flat land and adjacent to existing road and new ones are also being constructed on flat land after site clearing and leveling. So far there are no instances with potential of erosion during

construction of above said lines. Any adverse impact arising during the construction is limited to the boundaries of proposed substation only and neither impacts nearby habitat/property nor health & safety of neighboring community. Tower/pole foundations involve excavations on small scale basis and the excavated soil is utilized for back filling. In case of substations, generally the sites are selected in such a manner that the volume of cutting is equal to volume of filling so as to avoid borrowing of the area. Issues relating to operational health and safety has been adequately addressed. The labourers are provided with safety gear and provisions for first aid and arrangement for shifting of affected persons to nearby hospitals are also in place. Compensation for injury and death has been ensured through provisions in Safety Plan & Contract condition. Proper sanitation facilities and safe drinking water are being provided in the project locations. The site managers have been advised to ensure that there are no instances of open defecation.

The IA has a continuous monitoring mechanism of the project w.r.t. compliance of the mandatory requirements as stipulated in the IEAR. Thus, the adherences to the clauses by the contractors are regularly monitored especially in respect of EMP implementation, OHS compliance. The project has thus far had zero fatality which is indicative of the strict vigil of the IA.

The Capacity building and Institutional Strengthening program of the IA is held intermittently to enhance the skills of the project officials. Further, meetings between IA and MSPCL are held on a monthly/ bimonthly basis to assess the work progress and difficulties encountered in respect of land acquisition, RoW and compensation if any.

Public is informed about the project at every stage of execution. Public consultation using different technique like Public Meeting, Small Group Meeting, informal meetings have been carried out during different activities of project cycle. For the Participatory Rural Appraisal (PRA), informal meetings were held with various stakeholders such as IA, contractors, labours, villagers etc. to capture their view about the project. It emerged from the survey that the PAPs were appreciative of the project and hoped that the power scenario would improve after commissioning of the project. Local people are also getting benefited through project related employment that was being generated.

Overall, the planning and layout of the project elements have been undertaken in a judicious manner so as to ensure minimum environmental impact. However, during the implementation phase, especially in respect of

the construction, strict monitoring by the IA should be undertaken so as to ensure proper compliance by the contractors with reference to the IEAR and especially with regard to compliance of the health and safety measures.

Chapter

1

INTRODUCTION & PROJECT DESCRIPTION

1.1 PROJECT BACKGROUND

India's North East Region (NER) stretches across the eastern foothills of the Himalayan mountain range and is comprised of seven states including Assam, Arunachal Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, and Tripura.

Recognizing that intrastate Transmission & Distribution (T&D) systems in the NER states have remained very weak and that there is a critical need to improve the performance of these networks, the Central Electricity Authority (CEA) developed a comprehensive scheme for the NER in consultation with Power Grid Corporation of India Limited (PGCIL/ POWERGRID) and the concerned state governments. This scheme is intended to (a) augment the existing T&D infrastructure to improve the reliability of service delivery across all the NER states and (b) build institutional capacity of the power utilities and departments in the NER. This scheme is part of the Government of India's (GoI) wider efforts to develop energy resources in the NER for electricity supply within the region, to strengthen transmission networks, expand and strengthen sub-transmission systems, and extend last mile electricity connectivity to household.

Gol requested for World Bank's (WB) support in implementing a set of priority investments in six NER States In 2016, the WB has approved a loan (IBRD 470 USD Million) to the Gol for **North Eastern Region Power System Improvement Project (NERPSIP)** which aims to create a robust intrastate transmission and distribution network in all the six (6) North Eastern States. The project being funded on 50:50 (WB loan: Gol) basis except the component of capacity building for Rs. 89 crore, which Gol will bear entirely. The scheme is to be taken up under a new Central Sector Plan Scheme of Ministry of Power (MoP).

MoP, GoI has appointed POWERGRID as Implementing Agency (IA) to six North Eastern States for the said project under Tranche-1 in close coordination with the respective State Governments/Utilities. However, the ownership of the assets shall be with the respective State Utilities/State Government which upon progressive commissioning shall be handed over to them for taking care of Operation and Maintenance of assets. POWERGRID is also facilitating in building the institutional capacity of the state departments and utilities to continue managing the rehabilitated networks in an efficient

manner. The state wise scope of works proposed under Tranche-1 is given below in **Table 1.1**.

Table 1.1: State Wise Scope of Work Proposed Under Tranche-1

State	Transmission/ Sub-transmission (132kV & above)			Distribution (33kV)		
State	Line (km)	New S/s (No.)	Total MVA (New & Aug.)	Line (km)	New S/s (No.)	Total MVA (New & Aug.)
Assam	217	11	1668	389	16	240
Manipur	223	2	139	99	13	274.85
Meghalaya	207	4	940	199	11	150
Mizoram	116	3	100	4	1	6.3
Nagaland	193	5	245	76	10	200
Tripura	236	9	1389	950	34	510
Total	1192	34	4481	1717	85	1381.15

Source: https://cea.nic.in/wp-content/uploads/transmission/2020/09/mpr_cfs.pdf and updated based upon Monthly Progress Report of Manipur PSIP, May 2021

The project has two components namely, Component A: Priority Investments for Strengthening Intrastate Transmission, Sub-transmission, and Distribution Systems, and Component B: Technical Assistance for Capacity Building and Institutional Strengthening (CBIS) of Power Utilities and Departments of Participating States. The total project cost is **Rs. 5111.33 Crore** with financing from both GoI and Bank on 50:50 basis. The Bank is providing financial support to the tune of US\$ 470 million (**Rs. 2511.165 Crore**) under the Loan No.-8631-IN which was signed on 28th November, 2016 and became effective from 20th February, 2017. The loan closing date is 31st March, 2023. The remaining financing including capacity building will be met through GoI funding. Details of State wise funding is placed below in **Table 1.2**.

Table 1.2: Details of State Wise Funding

	World Bank	Governi	Total	
State	Project Cost	Project Cost	Capacity Building	(Rs. in Cr.)
	(Rs. in Cr.)	(Rs. in Cr.)	(Rs. in Cr.)	(KS. III CI.)
Assam	729.485	729.485	14.83	1473.803
Manipur	213.690	213.690	14.83	442.213
Meghalaya	381.050	381.050	14.83	776.933
Mizoram	150.965	150.965	14.83	316.763
Nagaland	357.290	357.290	14.83	729.413
Tripura	678.685	678.685	14.83	1372.203
Total	2511.165	2511.165	89.00	5111.33

1.2 PROJECT JUSTIFICATION

The state of Manipur is spread over an area of about 22,327 sq. km with a population of more than 25 Lakh. The present per capita energy consumption is of the order of 240 units (kWh) against the regional per capita consumption of about 258 units and national per capita consumption of about 779 units. The state meets its power requirement through about 43 MW of self-generation and about 123 MW of power allocation from various central sector generation projects of NHPC Ltd. and North Eastern Electric Power Corporation Limited (NEEPCO). The present demand is of the order of 125 MW. As most of the generation projects in the north eastern region are hydro in nature, the state faces shortage of power during low-hydro generation condition.

Presently, the state draws its share of power from central sector generating stations through following inter-state transmission system:

- 132kV S/C Dimapur (POWERGRID, Nagaland) Imphal (POWERGRID)
- 132kV S/C Badarpur (POWERGRID, Assam) Jiribam (POWERGRID)
- 132kV S/C Aizwal (POWERGRID, Mizoram) Jiribam (POWERGRID)
- 132kV S/C Haflong (POWERGRID Assam) Jiribam (POWERGRID)
- 132kV S/C Pailapool (POWERGRID, Assam) Jiribam (POWERGRID)
- 132kV S/C Imphal (POWERGRID) Loktak (NHPC)
- 132kV S/C Imphal (POWERGRID) Imphal (Manipur)
- 132kV D/C Loktak (NHPC) Jiribam (POWERGRID) (one of 132kV D/C line is owned by POWERGRID and the other by Manipur)
- 132kV S/C Imphal (POWERGRID) Kohima (Nagaland)

As per the 18th Electric Power Survey of CEA, the future demand of the state is expected to grow to about 346 MW by year 2016-17 and 497 MW by year 2021-22. This shall be met through various hydro and thermal projects coming up in the north-eastern region in near future, which are as follows:

Pallatana GBPP: 726 MWBongaigaon TPS: 750 MW

Kameng HEP: 600 MW

Lower Subansiri HEP: 2000 MW

The state has a share of about 146 MW from these future generation schemes. With this, the total share of the state from central sector generating stations shall be about 269 MW. Various 400 kV interconnections (initially operated at 132 kV level) have been planned to transfer power from these future generation schemes to the state of Manipur, which are as below:

- 400 kV D/C (charged at 132kV) New Kohima (POWERGRID, Nagaland) Imphal (POWERGRID)
- 400 kV D/C (charged at 132kV) Silchar (POWERGRID, Assam) Imphal (POWERGRID)

Besides this, the present Intra-State transmission system of the State is quite old & weak and is unable to cater to the growing power requirements of the State. Although the present transmission and distribution (T&D) system covers many areas of the State, it is inadequate in its reach and due to non-availability of redundant T&D system, outage of any transmission system element results in long term power shortages making the system highly unreliable. Besides, some of the network elements have undergone long term outage due to break-down. Therefore, it has become essential to address the above situation through remedial measures in the T&D system. Accordingly, phase wise strengthening of transmission & sub-transmission system has been proposed.

The transmission schemes proposed under Tranche-1 of Manipur State include construction of 222.738 km of 132 kV Transmission Lines (TL) & associated 2 new substations and 98.519 km of 33 kV Distribution Lines (DL) & associated 13 new substations along with augmentation & strengthening of transmission and distribution spread across the State.

The Power Map of Manipur indicating the existing and proposed T&D network is placed in **Figure 1.1**. Summary of subprojects to be implemented in the State in Tranche-1 under NERPSIP along with capacity addition and cost is shown in **Table 1.3** below.

Table 1.3: Summary of Subprojects in Tranche- I Under NERPSIP

S. No.	Name of the subproject	Quantity (Nos.)	Capacity Addition (km/MVA)	Estimated Cost (Rs. in Cr.)
1	132 kV Transmission lines	6	222.738 km	
2	132/33kV substations (New/Augmentation)	10	139.18 MVA	442.212
3	33 kV Distribution lines	13	98.519 km	442.213
4	33/11kV substations (New/Extension/ Augmentation)	38	274.85 MVA

1.3 PROJECT BENEFIT

The proposed transmission and distribution schemes will not only improve overall power supply situation but will also improve reliability, quality, security and enhancement of power supply in the North Eastern Region.

1.4 PROJECT SCOPE & PRESENT STUDY

In line with Manipur State Power Company Limited's (MSPCL), Electricity Department, Government of Manipur (GoMan), Environment and Social Policy & Procedures Framework (ESPPF), POWERGRID carried out comprehensive environment and social assessment of each subprojects and prepared Initial Environment Assessment Report (IEAR). These reports were subsequently disclosed for public information both on the State Utility, POWERGRID and Bank website after obtaining clearance from The World Bank.

As mandated in the ESPPF, a Final Environment Assessment Report (FEAR) for each subproject need to be prepared with an objective to assess the measures identified compliance of mitigation in IEAR including implementation of EMP provisions by IA/ Contractor. However, as per Project Agreement signed between POWERGRID and Bank such study is required to be undertaken by Independent Agencies as per Term of Reference agreed with Bank. As a part of this development, POWERGRID appointed R S Envirolink Technologies Pvt. Ltd. (RSET) as Independent consultant vide Letter of Award (LOA) Ref No.: NEGW/C&M/2020-21/NERPSIP/300-19/LOA-**6/155** dated **26/08/2020** to carry out FEAR study.

The present FEAR is a document developed as a consultancy assignment to validate the work undertaken and to critically examine any deviation, if any with respect to management measures as outlined in the IEAR which is based on MSPCL's ESPPF, World Bank's Operational Policies and Bank's Environmental, Health, and Safety Guidelines for Electric Power Transmission and Distribution.

The scope of the present study includes 132 kV transmission line and associated 132/33 kV substations, 33 kV distribution lines and associated 33/11 kV substations which are being implemented in Bishnupur, Churachandpur, Imphal East, Imphal West, Jiribam, Kakching, Kamjong, Noney, Senapati, Thoubal and Ukhrul Districts of Manipur. Detail of T&D network are given below and shown in **Figure 1.2.**

1.4.1 Transmission Components

The present study includes three 132 kV transmission lines and associated four 132/33 kV substations being implemented in Imphal East, Imphal West, Jiribam, Kakching, Senapati, Thoubal and Ukhrul Districts of Manipur. Details of Transmission network are given below in **Table 1.4.**

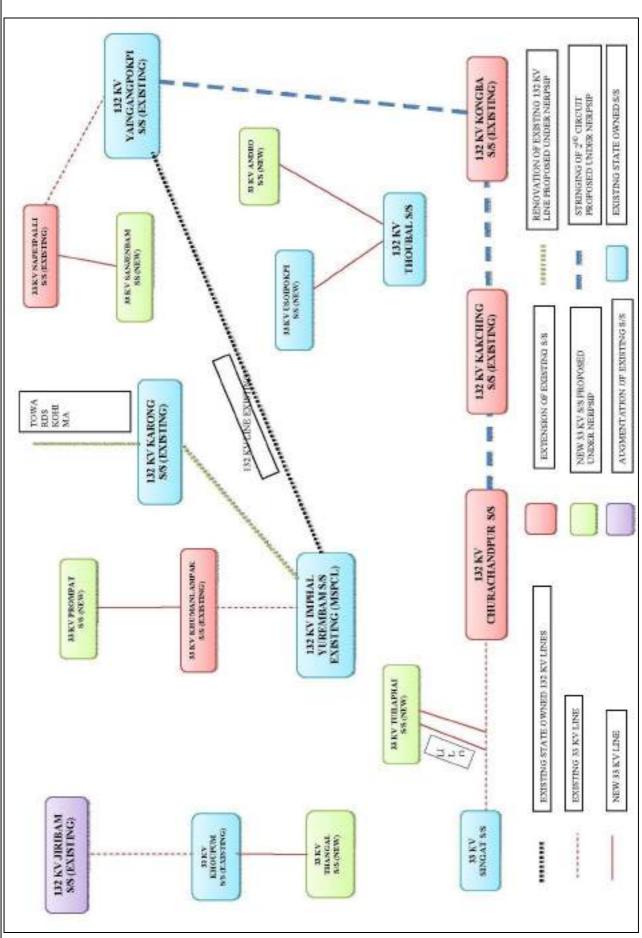

Figure 1.2: Proposed T&D Network in Bishnupur, Churachandpur, Imphal East, Imphal West, Jiribam, Kakching, Kamjong, Noney, Senapati, Thoubal and Ukhrul Districts under NERPSIP

Table 1.4: Details of Transmission Network

S. No.	Name of the Line	Name of New/ Existing Sub- station	Project District/s
1	Stringing of 2 nd circuit of 132 kV D/C Yaingangpokpi-Kongba Line – 32.75 km	Extension of existing 132/33 kV substation at Kongba	Imphal East
2	Stringing of 2 nd circuit of 132 kV D/C Kakching-Kongba Line – 43.588 km	Extension of existing 132/33 kV substation at Kakching	Imphal East, Kakching, Thoubal
3	Renovation of Yurembum- Karong-Mao Section of 132 kV S/C Yurembum-Karong-Kohima Line - 91.0 km		Imphal West, Senapati
4		Extension of existing 132/33 kV substation at Ukhrul	Ukhrul
5		Extension of existing 132/33 kV substation at Jiribam	Jiribam

1.4.2 Distribution Components

The present study includes five 33 kV distribution lines and associated seventeen 33 kV substations being implemented in Bishnupur, Churachandpur, Imphal East, Imphal West, Jiribam, Noney, Thoubal and Ukhrul Districts of Manipur. Details of Distribution network are given below in **Table 1.5.**

Table 1.5: Details of Distribution Network

S. No.	Name of the Line	Name of New/ Existing Sub- station	Project District/s
1	33 kV line from Andro to	Establishment of 33/11kV	Imphal East
	Langdum substation – 4.93 km	substation at Andro	
		Extension of existing 33/11 kV substation at Langdum	
2	33 kV line from Sanjenbam to	Establishment of 33/11kV	Imphal East
	Porompat substation – 3.59 km	substation at Sanjenbam	
		Establishment of 33/11kV	
		substation at Porompat

7		Extension of existing 33/11 kV substation at Iroisemba	Imphal West
8		Augmentation of existing 33/11 kV substation at Khuman Lampak	Imphal East
9		Augmentation of existing 33/11 kV substation at Thoubal	Thoubal
10		Augmentation of existing 33/11 kV substation at Wangjing	Thoubal
11		Augmentation of existing 33/11 kV substation at Jiribam	Jiribam
12		Augmentation of existing 33/11 kV substation at Kamjong	Kamjong
13		Augmentation of existing 33/11 kV substation at Litan	Ukhrul
14		Extension of existing 33/11 kV substation at Nambol	Bishnupur

1.5 OVERALL PROJECT PROGRESS

A brief status on project implementation progress of various transmission & distribution components till May, 2021 is given below in **Table 1.6**.

Table 1.6: Brief Status on Project Implementation Progress

S. No.	Name of the T & D Components	Progress as on May, 2021
Α	Transmission and Distribution Line	
1	Stringing of 2 nd circuit of 132 kV D/C Yaingangpokpi-Kongba Line	➤ Charged on 06/12/2019
2	Stringing of 2 nd circuit of 132 kV D/C Kakching-Kongba Line	> Completed on 31/01/2020
3	Renovation of Yurembum-Karong-Mao Section of 132 kV S/C Yurembum- Karong-Kohima Line	Work has been completed in all respect except Diversion Portion. Work for Diversion portion could be taken up after approval from competent authority.
4	33 kV line from Andro to Langdum substation	Commissioned on 15/05/2020
5	33 kV line from Sanjenbam to Prompat substation	Commissioned on 28/06/2019
6	33 kV line from Sanjenbam to Napetpalli substation	Commissioned on 11/06/2019
7	33 kV line from Khoupum to Thangal substation	➤ Work completed on 30.01.2021
8	LILO of existing 33 kV Churachandpur to Thankew line at Tuilaphai	Commissioned on 16/12/2018
В	Transmission and Distribution Sub-station	ns
1	Bay Extension of existing 132/33 kV substation at Kongba	 Commissioned on 01/12/2019, 24/08/2020 and 23/10/2020

S.		Final Environment Assessment Report - 2, Manipur
No.	Name of the T & D Components	Progress as on May, 2021
	Bay Extension x 2 + 1 Xmer Bay (20 MVA)	
2	Extension of existing 132/33 kV substation at Kakching	Commissioned on 30.10.2019
	Bay Extension x 1	
3	Extension of existing 132/33 kV substation at Ukhrul 1 Xmer Bay (12.5 MVA)	Commissioned on 28.02.2021
4	Extension of existing 132/33 kV substation at Jiribam 1 Xmer Bay (20 MVA)	 Required land for extension work already available in the existing substation premise and hence, no fresh land secured. Civil work is complete Erection work is almost complete
		Cable laying work in progress
5	Establishment of 33/11kV substation at Andro (2x3.15 MVA)	Commissioned on 15/05/2020
6	Establishment of 33/11kV substation at Porompat (2x5 MVA)	Commissioned on 28/06/2019
7	Establishment of 33/11kV substation at Sanjenbam (2x3.15 MVA)	Commissioned on 31/07/2019
8	Establishment of 33/11kV substation at Thangal (2x3.15 MVA)	Commissioned on 30/07/2020
9	Establishment of 33/11kV substation at Tuilaphai (2x3.15 MVA)	Commissioned on 23/12/2018
10	Augmentation of existing 33/11 kV substation at Thoubal (1x5 MVA)	Commissioned on 29/05/2019
11	Augmentation of existing 33/11 kV substation at Wangjing (1x3.15 MVA)	Commissioned on 28/08/2019
12	Extension of existing 33/11 kV substation at Iroisemba (Bay addition)	Commissioned on 30/07/2019
13	Extension of existing 33/11 kV substation at Mongsangei (Bay addition)	➤ Commissioned on 30/07/2019
14	Extension of existing 33/11 kV substation at Langdum (Bay addition)	Commissioned on 05/10/2019
15	Augmentation of existing 33/11 kV substation at Nambol (1x5 MVA)	Commissioned on 27/05/2019
16	Augmentation of existing 33/11 kV substation at Jiribam (2x5 MVA)	Commissioned on 10/09/2019
17	Extension & Augmentation of existing 33/11 kV substation at Khoupum	 Commissioned on 03/04/2019 Commissioned on 29/10/2019 (1st Xmer) Commissioned on 03/11/2019 (2nd Xmer)
18	Augmentation of existing 33/11 kV	Commissioned on 20/01/2019

S. No.	Name of the T & D Components	Progress as on May, 2021
	substation at Litan (1x3.15 MVA)	
19	Augmentation of existing 33/11 kV substation at Khuman Lampak (3x10 MVA)	Commissioned on 18/01/2019
20	Extension & Augmentation of existing 33/11 kV substation at Napetpali (1x5 MVA)	Commissioned on 05/12/2018Commissioned on 16/11/2018
21	Augmentation of existing 33/11 kV substation at Kamjong (1x3.15 MVA)	Commissioned on 15/06/2019

1.6 OBJECTIVE & METHODOLOGY ADOPTED FOR FEAR STUDY

The main objectives of the FEAR study are to assess the mitigative measures as suggested in IEAR and/or EMP are effectively implemented/ addressed at the ground during pre-construction & construction stages of project cycles. The study also helps in establishing the status of compliance of various mitigation/management measures provided in the IEAR/EMP and suggests gaps or weaknesses, if any.

To achieve this, RSET undertook a comprehensive biophysical, environmental, socioeconomic data gathering exercise along the transmission/ distribution line routes and substations location to assess/verify the actual site-specific measures implemented/ being implemented by IA/ Contractor in respect of measure/ actions listed in IEAR/EMP. The methodologies adopted for instant FEAR are as follows:

Defining Study Area: Environmental impacts of Transmission & Distribution (T&D) projects are not far reaching and are mostly localized to RoW (refer **Table 1.7**). However, T & D projects have some effects on natural and socioculture resources. Study area has been defined as RoW of transmission line i.e. 27 m corridor for 132 KV transmission line and 15 m corridor for 33 KV transmission line. Also, area in immediate vicinity of substations has been included in the study area.

Table 1.7: RoW Width

Transmission Voltage	Max. RoW (m)
132 kV	27
33 kV	15

Review of existing reports: Review of existing reports and data prepared and generated by POWERGRID such as Initial Environment Assessment Report (IEAR), Environment and Social Policy & Procedures Framework (ESPPF),

Compensatory Plan for Temporary Damage (CPTD) etc. was undertaken and suitably incorporated in the present report.

Literature review: Review of existing literature was undertaken for collection of secondary baseline data related to physiography, climatic conditions, demography, natural resources including forests/wildlife, protected area and socio-economic features of the study area. Sources and data so collected have been mentioned below:

- 'A Revised Survey of the Forest Types of India' by Champion and Seth (1968) was used for forest type classification of forests in the study area.
- Data collected from published literature of Zoological Survey of India, Forest Survey of India, Botanical Survey of India, Website of Directorate of Environment, Govt. of Manipur and other research and government publications for floral and faunal diversity of the study area.
- Soil map of the study area was prepared using 'Soils of Manipur for Optimising Land Use, NBSS Publ. 56-C, 1996' published by National Bureau of Soil Survey & Land Use Planning (NBSS&LUP), Nagpur.
- Conservation status of flora and fauna of the study area as per Indian Wildlife (Protection) Act (1972), threatened status according to IUCN Red List 2020.1, Red Data Book of Indian Plants by Botanical Survey of India, Kolkata.
- Census of India 2011 for demography of the study area.

Collection of primary data and Physical verification of construction elements: To gather primary data/ physical verification, a field visit/ survey of the project area along with IA and Contractor staff was made in January 2021. The data which has been collected from field visit are implementation status of proposed environmental management plan and mitigation measures as suggested in IEAR.

Ground truthing/ physical verification was made with photographic evidence and verification of record maintained by IA and Contracts for various activities for monitoring the compliance of mitigation measures like Health and Safety measures, Solid waste and sanitation, construction of protection wall/retaining walls, status of labour camps location of proposed substations, towers, and Transmission & Distribution Lines alignments. Findings of field

survey were consolidated along with secondary data for interpretation and finding the gaps for immediate necessary action.

Surveys for flora and fauna: Being a transmission line project, ecological surveys for assessment of vegetation structure/ profile in the proximity of the proposed transmission lines, corridors of transmission line routes, substations, etc. were conducted wherein line transact methodology has been followed.

The terrestrial ecological surveys were undertaken to prepare a comprehensive checklist of flora (angiosperm, gymnosperm, pteridophyte, and bryophytes) and fauna (mammals, birds, herpetofauna and butterflies) of the study area. The study area was divided into different strata based on topography and vegetation pattern covering different land use/ land cover categories like scrubland near agricultural fields, forest, fallow/abandoned land, and vegetation growing along the project components (RoW of transmission line, near towers and sub-stations).

As the topography along the routes varied from foothills to top of the hills. In the valley region, most of the transmission line route passes through the bunds of paddy fields. The coverage of the study area was hampered by inaccessibility of certain areas due to inhospitable terrain. It was therefore, not feasible to chart the entire routes of proposed/completed transmission line as large part of the routes has steep slopes and due to issues of accessibility at present. However, during the field surveys at least 10% of the route was covered for the collection of baseline data, which in some cases constituted a continuous stretch and, in some cases, could be covered in parts.

A series of transects were identified along the routes of transmission line covering the corridors between the RoW of transmission line and substations. Area covered under different sub-components (RoW of transmission line and substations) of project is given below in table. Faunal surveys also were conducted along the same transects.

Transmission Lines and Transects Locations for sampling

S. No.	Name of Transmission Line	Status	Distance Covered
1	Stringing of 2 nd circuit of 132 kV D/C Yaingangpokpi-	Work	Approx.
	Kongba Line – 32.75 km	completed	5 km
2	Stringing of 2 nd circuit of 132 kV D/C Kakching-Kongba	Work	Approx.
	Line – 43.588 km	completed	5 km
3	Renovation of Yurembum-Karong-Mao Section of 132	Work	Approx.

S. No.	Name of Transmission Line	Status	Distance Covered
	kV S/C Yurembum-Karong-Kohima Line - 91.0 km	completed	10 km
4	33 kV line from Andro to Langdum substation – 4.93	Work	Approx.
4	km	completed	2 km
5	33 kV line from Sanjenbam to Porompat substation –	Work	Approx.
5	3.59 km	completed	3 km
6	33 kV line from Sanjenbam to Napetpalli substation –	Work	Approx.
	7.472 km	completed	2 km
7	33 kV line from Khoupum to Thangal substation – 46.6	Work	Approx.
/	km	completed	5 km
8	LILO of existing 33 KV Churachandrapur - Thankew at	Work	Approx.
0	Tuilaphai – 0.342 km	completed	0.3 km

The results of the primary field surveys were supplemented with secondary data to fill the gaps and further with the information generated through PRA. In addition, at all the sites bird walks were also undertaken, particularly areas under private plantations nearby the routes to locate nesting sites and for bird sightings.

Consultation: Consultation was carried out with stakeholders like POWERGRID officials, MSPCL officials, Contractor, migratory labours, local labours, Village head and public representatives to collect data with respect to compliance of suggested Environmental Management Plan and implementation of mitigation measures.

Development of Maps: Geo-referenced and Google maps with superimposed coordinates of project elements were generated to verify locational details and details of physical features of terrain of the project locations.

Chapter **2**

POLICY, LEGAL AND REGULATORY FRAMEWORK

2.1 INTRODUCTION

Power transmission and distribution project activities by their inherent nature and flexibility have negligible impacts on environmental and social attributes. Indian laws relating to environmental and social issues have strengthened in the last decade both due to local needs and international commitments. MSPCL, IA and contractors are undertaking its activities within the purview of Indian and State specific laws keeping in mind appropriate international obligations and directives and guidelines with respect to environmental and social considerations of World Bank's Operational Policies.

2.2 CONSTITUTIONAL PROVISIONS

Subsequent to the first United Nations Conference on Human Environment at Stockholm in June, 1972, which emphasized the need to preserve and protect the natural environment, the Constitution of India was amended through the historical 42nd Amendment Act, 1976 by inserting Article 48-A and 51-A (g) for protection and promotion of the environment under the Directive Principles of State Policy and the Fundamental Duties respectively. The amendment, *inter alia* provides:

"The State shall endeavor to protect and improve the environment and to safeguard the forests and wildlife of the country". (New Article 48A)

"It shall be the duty of every citizen of India to protect and improve the natural environment including forests, lakes, rivers and wildlife and to have compassion for living creatures". [New Article 51 A(g)]

Article 21 of the constitution provides, "no person shall be deprived of his life or personal liberty except according to procedure established by law".

Article 21 is the heart of the fundamental rights and has received expanded meaning from time to time after the decision of the Supreme Court in 1978. The Article 21 guarantees fundamental right to life — a life of dignity to be lived in a proper environment, free of danger or disease or infection. Recently, Supreme Court has broadly and liberally interpreted the Article 21, transgressing into the area of protection of environment, and held that the citizen's right to live in an eco-friendly atmosphere is to be interpreted as the basic right guaranteed under Article 21.

Thus, the Indian Constitution now has a two folds provision:

- (a) On the one hand, it gives directive to the State for the protection and improvement of environment.
- (b) On the other hand, the citizens owe a constitutional duty to protect and improve the natural environment.

Article 371 C provides special provision to the State of Manipur for the Constitution and functions of a committee of the Legislative Assembly of the State consisting of members of that Assembly elected from the Hill Areas of the State. Under this Manipur (Hill Areas) District Council Act was enacted in 1971 which has provisions similar to those contained in the Sixth Schedule and has established six Autonomous Hill District Councils, covering 5 hill districts of the State. These Autonomous Hill District Councils (AHDC) are empowered to maintain and manage the property: movable and immovable, and institutions under their jurisdiction (e.g. in the field of agriculture, animal husbandry, community development, social and tribal welfare, village planning, management of any forest except RF, regulation of the Jhum /shifting cultivation or any other matter.) Under this act, the administrations of the Tribal areas are vested in village/district council under supervision of concerned DC at local/district level and Hill area Committee at State level. All activities sited in AHDC area needs their consent.

Constitutional provisions in regard to social safeguards are well enshrined in the preamble such as **JUSTICE**, social, economic and political; **LIBERTY** of thought, expression, belief, faith and worship; **EQUALITY** of status and of opportunity; **FRATERNITY** assuring the dignity of the individual and the unity and integrity of the Nation. Fundamental Rights and Directive Principles guarantee the right to life and liberty. Health, safety and livelihood have been interpreted as part of this larger right. Social safeguards provisions are dealt in detail in different Article such as Article-14, 15 17, 23, 24, 25, 46, 330, 332 etc.

2.3 ENVIRONMENTAL PROVISIONS

Environmental issues of T&D projects are manageable given the inherently small 'foot print' of towers and flexibility in siting facilities within a relatively large host area and are mostly localized to RoW. However, transmission line project may have some adverse effects on natural resources. These impacts can be minimized by careful route selection and siting of substations. The applicable acts, rules, and relevant policies in the context of the project and its status of compliance are presented in **Table 2.1**.

2.5 WORLD BANK OPERATIONAL POLICY

When World Bank provide governments with financing to invest in projects such as building a road, connecting people to electricity, or treating waste water, World Bank we aim to ensure that the people and the environment are protected from potential adverse impacts. World Bank do this through policies that identify, avoid, and minimize harm to people and the environment. These policies require the borrowing governments to address certain environmental and social risks in order to receive World Bank support for investment projects. The mandatory environment and social requirements with respect to World Bank Operational Policies are presented in **Table 2.3**.

2.6 STATUTORY PERMISSION/LICENSES/NOC OBTAINED

The applicability of acts, notifications and policies have already been described in above paragraphs and table. As per the applicability, necessary permission/licenses/ NOC so far obtained by IA or contractor are:

- Under the provisions of Section 68(1) of Electricity Act, 2003, prior approval GoN is a mandatory requirement to undertake any new transmission project 66kV upward and for distribution project of 33kV system in the State. As a part of permission/ approval, GoI approved the NERPSIP comprehensive scheme for six North Eastern States including Manipur under vide its Office Memorandum dated 1st December 2014. In addition, Implementation/ Participation agreement between MSPCL and PGCIL has been signed on 26th March, 2015.
- All the contractors are operating with valid labor license as per provision under section 12(1) of the Contract Labour (Regulation & Abolition) Act, 1970 and also certified under Section- 7(3) of the Building and Other Construction Workers (Regulation of Employment and Condition of Service) Act, 1996 from Ministry of Labour & Employment.
- All the contractors have obtained requisite insurance policy as per provisions of Employee Compensation Act, 1923 for its employed workforce.
- Since the locations of stringing of 2nd circuits are coming under various villages of districts, No Objection Certificates (NoC) from concerned land owner/ Headman /Village Council are being obtained as per the progress of work.

		Guidelines contain the performance levels and measures that are generally considered to be achievable in new facilities by existing technology at reasonable costs.		
9	OP 4.12 – Involuntary Resettlement	Covers direct economic and social impacts both resulting from Bank-assisted investment projects and are caused by the involuntary taking of land. To avoid or minimize involuntary resettlement and, where this is not feasible, assist displaced persons in improving or at least restoring their livelihoods and standards of living in real terms relative to pre-displacement levels or to levels prevailing prior to the beginning of project implementation, whichever is higher.	Not Applicable - As no involuntary acquisition invoked for securing land for proposed substations. However, fresh land required for construction of new substations were secured through direct Purchase on Willing Buyer Willing Seller basis on negotiated rate	Not Required.
7.	OP 4.10 – Indigenous Peoples	This policy contributes to the Bank's mission of poverty reduction and sustainable development by ensuring that the development process fully respects the dignity, human rights, economies, and cultures of Indigenous Peoples. The objective is to design and implement projects in a way that fosters full respect for indigenous peoples so that they receive culturally compatible social and economic benefits, and do not suffer adverse effects during the development process. The project shall ascertain broad community support for the project based on social assessment and free prior and informed consultation with the affected Tribal community, if any.	Not Applicable - Explicit consent from ADC and the Village Councils is required in the case of acquisition of lands which is not applicable in instant project. However, NoC from AHDC, village councils and land owners obtained for community forest land/ADC area wherever applicable.	Complied with: NoC of from AHDC, village councils and land owners being obtained for community forest land/ADC area wherever applicable.

Chapter

3

BASELINE DATA

3.1 INTRODUCTION

This chapter deals with the baseline status of physical, biological, socio-economic environment in the study area as well as districts belonging to study area. The baseline data presented in this chapter has been prepared from primary data collected during field studies as well as data/information gathered from available literature an reports published by various institutions and organizations.

3.2 DEFINING STUDY AREA

Environmental impacts of T&D) projects are not far reaching and are mostly localized to RoW (refer **Table 3.1**). However, T&D projects have some effects on natural and socio-culture resources.

Study area has been defined as RoW of transmission line i.e. 27 m corridor for 132 KV transmission line and 15 m corridor for 33 KV transmission line. Also, area in immediate vicinity of substations has been included in the study area.

Table 3.1: RoW Width

Transmission Voltage	Max. RoW (m)
132 kV	27
33 kV	15

3.3 DISTRICTS BELONGING TO STUDY AREA

The project is an intra-state power sector project located in the State of Manipur and project area covers Bishnupur, Churachandpur, Imphal East, Imphal West, Jiribam, Kamjong, Kakching, Noney, Senapati, Thoubal and Ukhrul districts of Manipur.

Bishnupur district lies between 93.43°E and 93.53°E Longitudes and 24.18°N and 24.44°N Latitudes the total geographical area of the district is 496 Sq. Km. It is bounded on the North by Imphal West district, on the South by Churachandpur district, on the East by Imphal West and Kakching districts and on the West by Noney and Churachandpur districts.

Churachandpur district lies in the South-Western part of Manipur. It lies between latitudes 23°56′43″N to 24°42′N and longitudes 92°58′E to 93°52′8″E approximately. It is bounded on the North by Noney, Senapati, Bishnupur and

Kakching Districts, south by Mizoram and Myanmar (Burma), east by Chandel district and west by Pherzawl district. The total geographical area of the district is 2,465 sq. km. The topography of the district is hilly and lies 914.4 meters above MSL.

Imphal East district occupies the northeastern corner of the Manipur (Imphal) Valley. The district lies between latitudes 24°39′49.09"N and 25°4′5.45"N and longitudes 93°55′30"E and 94°8′42"E approximately. The Kangpokpi district bounds on the north and east, Thoubal district on the south and Imphal West district on the west. The total geographical area of the district is 497 km².

Imphal West falls in the category of Manipur valley region with total geographical area of 519 sq. km. It is a tiny plain at the centre of Manipur surrounded by Plains of other districts. Imphal City, the State Capital is the nodal functional centre of this district. It is surrounded by Kangpokpi district on the north, on the east by Imphal East, Thoubal and Kakching districts, on the south by Kakching and Bishnupur districts, and on the west by Senapati district.

Jiribam district lies between latitudes 24°33′49.09" N and 24°51′19.64" N and longitudes 93°3′39.6" E and 93°15′ E approximately. It is bounded on the north-east by Tamenglong district, on the east by Noney and Pherzwal districts, north and west by Assam state and south-east by Pherzwal district. The total geographical area of the district is 212 km².

Kakching district is located between 25°6′ to 26°4′N latitude and 93°20′ to 95°15′E longitude and is bounded by Thoubal district on the north, on the east by Tengnoupal and Chandel districts, on the south by Chandel district and on the west by Churachandpur, Bishnupur and Imphal West districts. It has total geographical area of 190 sq km.

Kamjong district shares a long international border with Myanmar. It is bounded by Myanmar in the east, Kangpokpi in the West, Ukhrul in the North and Tengnoupal in the South. The terrain of the district is hilly with varying heights of 913 m to 3114 m (MSL). The district headquarter is linked with state highway of 120 Km from Imphal. The total geographical area of the district is 2338 km².

Noney district is a new district in Manipur, covers an area of 1601 sq. km, created by bifurcating erstwhile Tamenglong district. It is surrounded by Tamenglong district on the north, on the east by Senapati district, on the

south by Churachandpur district, and on the west by Jiribam and Pherzawl districts.

Senapati district is located between 93.29° and 94.15° East Longitude and 24.37° and 25.37° North Latitude and lies in the northern part of Manipur State. The district is bounded on the south by Kangpokpi, Imphal West, Bishnupur and Churachandpur districts, on the east by Ukhrul district, on the west by Tamenglong and Noney districts and on the north by Kohima and Phek districts of Nagaland State. The district lies at an altitude between 1061 meters to 1788 meters above sea level. The total geographical area of the district is 1573 km².

Thoubal district lies in the south-eastern corner of the Manipur (Imphal) Valley between latitudes 24°14′ 29°45′N and longitudes 93°51′E to 94°9.18″E approximately. It is bounded on the north by, Imphal East and Kangpokpi districts, south by Kakching district, west by Imphal West district and east by Kangpokpi and Tengnoupal districts. The total geographical area of the district is 324 km². The average elevation is not much different from the rest of Manipur valley, about 790 meters on an average above the sea level. Although the district is a part of the valley, the landscape of the district is not entirely plain.

Ukhrul district is located in the north of the Manipur State and it is a hill district of the state bounded by Myanmar in the East, Kamjong district in the South, Kangpokpi and Senapati districts in the West and Nagaland State in the North. The terrain of the district is hilly with a varying height of 913 m to 3114 m (MSL). The total geographical area of the district is 2206 km².

3.4 PHYSICAL ENVIRONMENTS OF DISTRICTS BELONGING TO STUDY AREA

3.4.1 Physiography

Bishnupur district wholly belongs to the valley region. The surface of the district gradually slopes towards east and south-east. A number of hillocks, like Ishok (947 m above the mean sea level), Maibam Lokpaching (892 m), Laithouching (838 m), etc.are found spotted in the northern portion of the district. The Loktak Lake, which is the biggest fresh water lake in the NorthEastern India, occupies the heartland of this district. The Keibul Lamjao National Sanctuary, a home of the Brow Antlered Deer (Sangai in local name), one of the rarest animals in the world is situated in the southeastern corner of this Lake. Islets like Thanga village (903 m), Ithing village (882 m), Karang

village (811 m) and Sendra (about 800 m) are the important settlements, which dot in this Lake near the National Sanctuary. Some hillocks as high as 879 m above the mean sea level lie behind the western side of this sanctuary. The boundary of the district extends upto the foot hills of the Laimaton range and the Thangjing range on the west.

Churachandpur district has a small velley portion extended from Manipur (Imphal) valley along the Khuga River basin while the rest of the major portion belongs to the rugged hilly terrain. Churachandpur district is divided into 3 hilly regions, viz., i) Western Hilly Region, ii) Eastern Hilly Region and iii) Southern Hilly Region, based on geology, soils, topography, climate and natural vegetation. The Western Hilly Region occupies the west portion of Tuipilui river and Tuivai river. In this region there are three long and two small parallel hill ranges. In the western part, the Vangai range as high as 839 m near Kangreng extending north-south from Doltang to Tipaimukh. The important peaks of this region are Upper Kharkhublen (811), Bharakhal (566), Tingmun (444), Thingradhar (342), etc. The second range divides the Barak and Tuivai rivers in the west and Tuibum and Tuijanglui rivers in the east. The Senvon peak located in the southern portion 1,341 m high above the MSL is the highest peak of this range while other peaks are Khongjang (1,098). Parbung (1,022), Tolbung (840), Hrovakot (760), Taithu (644), Thingpan (522), etc. The third one streches from Natheilbok to Thanlon north to south as high as 1,55 m near Thanlon and separates the Tuijanglui river and Tuipilui river. The other peaks are Thangnangbung (1,112), Sawaipai (874), etc. A small range as high as 1,529 m start from Khongjang to Bungpuilon divides the tuibum river in the west, Tuiliyanlui river in the east and Tuijanglui river in the north. Pheriol (1,161), Phailian 91,043), etc. are the other peaks. The last one separates the Tuiliyanlui river in the west, Tuivai river in the east and Tuipilui river in the north extending north-south from Dialkhai to Sinzawl as high as 1,193 m near Sumtuk. The eastern hilly region lies east of Tuipilui and Tuivai rivers and north of the Singngat road. In this region a range stretches northsouth from Nayang to Mualkui as high as 1,448 m at Aina divides the Tuipilui river in the west, Tuivai river in the south, Tuililui river in the south-east and Leimatak river in the north-east. A small section of this range extends eastward at Moldak and separates the Leimatak and Tuililui rivers. The important peaks are Nayang (1,388), Kijuiliphai (1,207), Mualkui (845), Thieki (758), etc. From Nayang it extends eastward upto Khengjang, a peak as high as 1,561 m divides the Irang river and Leimatak river. Another range extends north-south from Zongmakot to Singtampaozang as high as 1,699 m at Mamun Lhang from which rover Leimatak has it source. The other peaks are Singtampaojang (1,174), Bemongzang (1,093), etc. This ranges divides the Tuililui river in the west, Tuila river in the east, Ruivel river in the south and

Leimatak river in the north. The last parallel range extends from Lamuan to Buksao as high as 2,068 mtrs. Near Ukha. It separates the Tuila river in the west, Khuga river and numbers of small streams falling into the Loktak Lake in the east. Nabil Khunou (1,915), Buksao (1,208), etc. are other peaks of this range. To the east of the Khuga river, a range extends from north to south direction as high as 1,924 m and divides the Khuga river and Tuining river. Two small ranges extends eastward. The Mt. Mulam (1,543) is located here. The outhern hilly region comprises the southern portion of Singhat road. There are five small parallel ranges extending north- south. The western range deivides the Tuikui river in the west and Tuilak river in the east. The important peaks of this range are Mualmet Vum (1,625), Kangkap (962), etc. The second range divides the Tuilak and Tuivel rivers and stretches from Suangdoh (1,231) to Ngalzang (1,403). Ngalgang (1,440), Donglam (1,070), etc. are the other peaks. The Behang Tang range as high as 933 m. Separate the Tuivel and Tuivai rivers. The next one stretches from Singhat to Maltomjang as high as 1,487 m and divides the Tuivei and Tuitha or Khuga rivers. The Thingbungthung range as high as 1,752 m. Separates the Tuitha or Khuga river and the Manipur river.

The geological formation of the **Imphal East** district belongs to the part of Indo-Myanmar (Burma) Ranges, which was made up at Tertiary, and Cretaceous sediments under which the Dissang Group of rocks was deposited probably during the Lower and Middle Eocene period. Some hills like Khundrakpam and other small hillocks such as Angom Leikai (820 m), Chingaren (804 m) and Chingmeirong (802m) dotted in the district, however, partly belong to the Barail Group that was formed during the Oligocene and appear Eocene periods. The Mount Nungsikom located in the Khundrakpam hill as high as 1,168 m above the mean sea level (MSL) is the highest relief in the district. Generally, the district slopes southwards. The Nongmaijing hill administratively under the Senapati district stretches north - south from the Kameng village to the end of the district boundary as high as 1,565 m near Nongmaijing Chiru village disturbs the physical feature of the district.

Imphal West slopes towards the east and south-east and the rivers and the streams flow eastwards and mainly towards the south. The district is mainly valley and there are no major hills and peaks in it. However, in the valley one comes across hillocks and small ranges of hills here and there of which mention may be made of the Langol, Pheidinga, Tendongyan, Chingmeiraong, Langthabal, Heibok and Chinga, the elevations differing from 813 meters at Chinga to 961 meters at Tendongyan. The geological nature of the district is composed of Barail Series and Simang formation (Garo Hills) and according to some geologists the soil which is alluvium in nature is comparatively of young

geological formation. Although adequate research has not yet been carried out to ascertain the origin of the valley some research scholars and geologists are of the opinion that the valley was once a place full of water much bigger than Loktak and swamps and marshy lands occupied most parts of the district and the valley was formed slowly by a gradual process of silting by soils carried down by the rivers and streams from the adjoining hills. Till recently there were many areas in the district consisting of swamps and marshy lands of which Lamphelpat, Takyelpat and Kakwapat (pat in local language meaning lake) are important ones. In recent years these marshy areas have been reclaimed for residential areas and agricultural purposes by improving the natural drainage system and constructing new ones.

Jiribam district, bordering Assam the Vangai range, which forms a wall in the eastern side stretching north - south as high as 708 m above the MSL separates the sub-division from the Tamenglong and Churachandpur districts. The eastern portion of the sub-division is topographically, higher than the western portion containing the basins of the Barak and Jiri rivers.

Senapati district slopes towards the south and the rivers and the streams flow mainly towards the south. As per the Regional Divisions of India - a Cartographic Analysis Series, Manipur published by the Registrar General, India in 1980 the district is divided into three hilly regions, viz., i) Northern Hilly Region, ii) Eastern Hilly Region and iii) Western Hilly Region. The Northern Hilly Region spreads over the district on the northern side and covers about half of the Mao-Maram sub-division. Its geology is related to Barail Series and Simsang formation and Jaintia Series and Disang Series with faults and thrusts. Soils are Udalfs-Ochrepts in general. The Eastern Hilly Region extends over the south eastern part of the district occupying whole of the Sadar Hills East sub-division (now Kangpokpi district) and some parts of Mao-Maram sub-division and a small portion of Sadar hills West sub-division. The soil is of UdalfsOchrept and Orthents-Udalfs and is formed over Barail Series and Disang Series with transported alluvium. The Western Hilly Region extends over the south western part of the district occupying more than half of the Sadar Hills and Saitu Gamphazol sub-divisions and some portions of Mao-Maram subdivision. The soil is of Udalfs-Ochrept, UdalfsOrthents and Orthents-Udalfs and the region is spread over Barail Series and Disang Series. Mount Tenipu which is 2,995 m above the mean sea level is the highest peak in Manipur and is located in the Northern Hilly Region on the northern side near Mao, a town bordering the state of Nagaland. During the winter months frozen snow could be seen at the peak at the morning hours. The other important peaks of the district are Laikot (2,832 meters), Shoyangjang (2,249 meters) and Laishan (2,261 meters).

Thoubal (including Kakching) district is, physiographically from north to south and southwest. The district is bounded on the east and south by the hills which are geologically related to Khasi Group and Axial Group and Jaintia and Disang series. However, in the district some hills/ hillocks partly belong to the Barail Series and Simsang formation are also dotted. A small hill range stretching north-south from Khoirom village to Khairenbikhok village as high as 994 m above the mean sea level (MSL) is spotted in the northeastern corner of the district. In the north-western corner, the Waithou hill 1,126 m high at Maring Phunal village extended from the Nongmaijing hill reaches upto the Moijing village in the south. Hillocks like Nungoi (799 m) and Chingkham (about 800 m) are also spotted behind the western side of this Waithou hill. The Kheba Ching (824 m) and Langathel (about (840 m) hillocks dots along the eastern side of NH 39 near Khongjom village. A hill stretching north-south as high as 906 m extending from Tentha village (879 m) to Keirak village (about 780 m). In this hill a village namely Mantak (860 m), which is administratively under the Chandel district is located at the southern portion. This hill separates the Kharung Pat (lake) in the east and Ikop Pat (lake) in the north.

The Khoidum Pat and Pumlen Pat (Lake) are located in the southern portion of this district bounded by the Imphal-Kakching state highway in the north, a hill namely Mondum as high as 1,015 m above the MSL in the south, residential areas in the east and the Manipur river in the west. The Mondum hill is located between Kakching Khunou and the Manipur river in east-west and Pumlen Pat and Wangoo Tera village in north-south. Some hillocks like Chingjao (823 m) are also spotted in the Pumlen Pat. Besides, a few hillocks as high as 864 m above the MSL are dotted along the Imphal-Sugnu state highway between Pangaltabi village and Sugnu Nagar Panchayat.

Ukhrul (including Kamjong) district has the distinction of being the highest Hill Station of Manipur. The terrain of the district is hilly with a varying heights of 913 m to 3114 m (MSL). The highest peak is the Khayang peak-3114 m (MSL), though the more popularly known peak is the Shirui Kashung Peak - 2,835 m (MSL). Ukhrul, the District HQ, is 2,020 m (MSL). Most of the major rivers originate from the crevices and slopes of this Shirui Peak. The terrain of the district is rippled with small ranges and striped by few rivers. 1. Somrah - Angkoching range, striped by Sanalok and Namba Lok; Shangshak - Phungyar range adjacent to which is the Shokvao - Mapithel - Kasom range striped by Tuyungbi and Taret Lok in the middle and Thoubal river in the West and Kachai - Hoome - Tampak Ngashan (Mahadev) range, striped by the tributaries of Thoubal river in Eastern side and Iril River in the Western side. The northern hilly region occupies the northern portion of the district and lies

between the Akhong Lok or Laini Lok river and Chammu river. A big range stretches from north to south starting from near Jessami to Siruhi Kashong as high as 2,568 m above the MSL at Siruhi Kashong. It divides the Chingai or Ringnga river in the east and Laini Lok river in the west. The important peaks of this range are Siruhi Kashong (2,568m), Chingjui (2,216m), Sihai Khullen (2,183m), Siruhi (1,944m), Kharasom North (1,567m), Kharasom (1,475m), etc. Another small range diverts from this range at Mariem Khullen towards the north and divides the Chingai river and Chammu river. The Mounts Chonglei (2,259m) and Chakyang (1,778m) are the major peaks of this range. In the west of this region, a small range stretches from north to south as high as 1,561 m at Khomunuam dividing the Iril river and Ihang Lok river. A parallel range as high as 1,958 m at Ringui divides the Ihang Lok river and Akhong Lok or Laini Lok river in the west, the Thoubal and Mesakhong river (a tributary of the Thoubal river) in the south. In the southern portion of the region, a range stretches east-west from the Siruhi Kashong dividing the Akhong Lok and Chammu rivers in the north, the rivers of Tuyungbi, Maklangkhong, and Khunukhong in the south and the Thoubal river in the west respectively. The important peaks of this range are Ukhrul (1,960m), Changa (1,725m), Sangshak (1,688m), Lambui (1,474m), etc. The eastern hilly region occupies the eastern part of the district that lies east of the Chammu and Maklangkhong rivers. The Gamgimol or Nehdoh Lhang range forms an International boundary with Myanmar; the major peaks located in the borderline are Mounts Khayang Bung (2,836m), Tusom Cisi (2,516m), Kachao Bung (2,464 m), followed by the Lahinpi Tuang range and Mulain range. The important peaks of these ranges are Mawlashin Tuang (1,841m), Mwehpe (1,704m), Kamong (1,043m), etc. From the Mount Khayang Bung, a small range stretches as high as 2,758 m near Khaiyang from north to south upto Chahang Khunou dividing the Sana Lok river and Khunukhong river. The Mount Mattiyang (1,531m) is the major peak of the range. Another parallel range divides the Khunukhong and Maklangkhong rivers. The important peaks are Singcha (2,023m), Mungba (1,700m), Chassad (1,664m), etc. The Mounts Kamong (1,043m) and Manchuibung (996m) are located in between the rivers Tuyungbi and Taret. The southern hilly region is situated at the southwestern corner of the district, which divides the Maklangkhong and Taret rivers. A range stretching from north to south starts from Sangshak to Sarbung as high as 1,742 m at Kambiching and divides the Maklangkhong river and Tuyungbi river. The Mounts Kambiching (1,742m), Neuphung (1,701m) and Sarathen (1,359m) are the major peaks of the range. The Marphitel range as high as 2,055 m near Singkap stretching north-south divides the Maklangkhong, Tuyungbi and Taret rivers in the east and the Thoubal river in the west.

3.4.2 Ground Water

Manipur is rich in water resources. The annual replenishable ground water resources of the state amount to 0.44 BCM, while net annual ground water availability stands at 0.40 BCM. As per Central Ground Water Board, stage of ground water development has been calculated as 1.02%. The state doesn't have any Over Exploited, Critical or Semi critical region as far as ground water is concerned. Barring certain pockets, quality of ground water has been found satisfactory.

3.4.3 River System

Manipur receives heavy rainfall from South West and North East Monsoons. The main rivers of the state include the Imphal, Iril, Thoubal, Sekmai, Heirok, Khuga, Manipur, Barak, Chapki, Tuining river etc. The Barak river basin draining the western part of the state and the Manipur river basin draining the Eastern part of the state are the two major river basins of Manipur. The Barak River originates from the hills of northern hills of Manipur in Senapati district. It flows through the southwestern hill ranges by passing the valley towards Cachar district in Assam. The main tributaries of the river are Jiri, Maku, Irang, Gwai rivers etc. The Manipur River basin is the main river system of Manipur valley and it originates from Sadar hills in Senapati district. The major tributaries of this basin that are flowing in the district are Imphal, Iril, and Thoubal Rivers etc. Manipur River is the main drainage of Manipur valley, which ultimately flows to the south towards Myanmar and falls into Chindwin River. Manipur river basin accounts for 0.5192 M hectare meter of annual run off against a total catchment area of 6332 sq kms, while the Barak river basin has a discharge capacity of 1.3295 M hectare meter against a catchment of 9042 sq. km. The main rivers flowing in the subproject area districts are Barak (Ahu), Manipur, Thoubal, Irang, Makhru (Makhu), Iring, Ijei (Aga), Wangjing, the Arong and the Sekmai, Leimatak, Leinganpokpi, Khuga, Tuitha and Apah rivers etc. Among these are Manipur & Barak (Ahu) are the biggest rivers and are perennial in nature. The main rivers flowing through districts belonging to study area are given below in **Table 3.2** and shown in **Figure 3.1** to **Figure 3.9**. The T&D network superimposed over the topographical sheets to highlight the drainage pattern and other features have been shown in Map 1 to Map 4.

11	OKIII UI	Chammu

3.4.4 Meteorology

The climate of Manipur is mostly tropical with alpine climate. The northeastern region has an amiable climate and is very cold in the winters. The climate varies according to the elevations of the land forms in the state. The weather in the plains is however, similar to that of the other states in the country. But the hilly regions are different and enjoy a pleasant climate with dry and low temperature. The weather in the state is highly influenced by the winds blowing from the Bay of Bengal and is conducive for heavy rainfall in the rainy season. The state experiences three main seasons like summer, winter and the rainy season. Manipur does not experience extreme climatic conditions with temperature in summers rising upto 32°C, although the winter temperature may go below zero degree. The weather is bright and sunny and the hills experience a dry and warm climate, while the plains are hot and dry like any other part of the country. As the Himalayan region is close by and the hills are actually an extension of the Himalayas, the climate here is similar to the Himalayan region, but not extreme. Winters begin from November and stay on till February. The coldest month is January, as cold winds freeze the atmosphere. The monsoon season begins in May and continues till the mid of October. Average rainfall ranges from 1250 mm to 2700 mm. November to February are the dry months.

Bishnupur district have a pleasant climate throughout the year. May-June is the hottest period while December-January is the coldest period in the year. The Loktak Lake influences the climatic conditions in the district in winter and summer. The maximum summer temperature recorded in the neighbouring district varies between 31°C to 38°C during 2001-2009 while the minimum is found ranging from 2°C to 5°C. The rainy season begins from the month of April-May and continues upto August September. Average rainfall in the district is 1204.2 mm

Churachandpur district has a moderate sub-tropical to temperate monsoon climate varying from place to place depending on the density of rainfall and elevations. The district has maximum temperature of 37°C while minimum is 10°C. The highest rainfall is 3080mm and the lowest is 597mm.

The climate of the **Imphal East** and **Imphal West** District is salubrious and Monsoon is tropical. The temperature varies from 0.6° C in winter to 41° C in summer. Average rainfall varies in the range of 1240 mm - 1470 mm.

Jiribam is humid with a moderately hot temperature. Jiribam lies under the direct influence of southwest monsoon season and rainfall is abundant compared to other places in the state. The average rainfall during the rainy season ranges from 1,000 to 1,600 mm. The hottest temperatures are recorded in May at about 40°C. The temperature is very pleasant in autumn, which falls around September to November. The lowest temperatures are recorded from the second half of December to the first half of January where temperatures can fall below 2.78°C at late night.

Thoubal and **Kakching** district has an equitable and pleasant climate. Rainfall is relatively abundant and widespread. The district is also under the effect of the so-called 'Vagaries of the monsoon' with the alternating droughts and floods. Average rainfall varies in the range of 1243.50mm to 1391.20mm. The summer months are never oppressive with the average maximum temperature fluctuating between 32°C to 35°C during April-June, the mercury seldom going beyond 37°C. In December-February with the start of the cold winter months the average minimum temperature fall to 6°C to 4°C, the temperature going below 0°C.

The climate of **Ukhrul** and **Kamjong** districts is of sub-tropical humid to temperate nature varies with elevation with a minimum and maximum degrees of 3° C to 33° C. The average annual rainfall is 1,763.7 mm.

Climate of **Senapati** district can be describe as humid subtropical climate. The temperature ranges from a minimum of 3.4°C to a maximum of 34.1°C. The annual rainfall ranges from 670 to 1450 mm (26.4 to 57.1 in).

Climatically, **Noney** belongs to sub-tropical zone. Because of high altitude, summers are mild with maximum temperature of 27°C and minimum temperature of 5°C.

3.4.5 Soil

The soil taxonomic (family) classification map of districts belonging to study area was prepared as per the data by National Bureau of Soil Survey & Land Use Planning (NBSS&LUP). Soil map prepared from this data is given at **Figure 3.10**.

According to **Figure 3.10** and **Table 3.3**, Soil Unit 12 is the most dominant Group (15.25%) which is characterized by deep, excessively drained, clayey skeletal soils on gently to moderately sloping side slopes of hills having clayey surface with moderate to severe erosion and moderate stoniness. Followed by, Soil Unit 2, covering 10.63% of the area, characterized by deep, excessively drained, fine soils occurring on strongly sloping side slopes of hills having loamy surface with moderate erosion. Rest all the soil units covers less than 10% of the districts belonging to study area.

Table 3.3: Soils in Districts Belonging to Study Area

Unit	Description	Taxonomic Classification	Area (sq km)	Area (%)
1	Deep, well drained, fine loamy soils occurring on strongly sloping side slopes of the hills having loamy surface with moderate erosion; associated with: Deep, poorly drained, fine soils on gently sloping narrow valleys with slight erosion. 3.4.6 Landuse Pattern

The study area will pass through mixed land uses which are generally agricultural land, private plantation, government land etc. The calculations are based on detailed survey/ investigation carried out along the route of transmission/distribution lines and considering the total line length of the line and its right of way. The total line length is 230.272 km which will impact an estimated of 1349.68 acre of land. These include 114.97 km of line passing through agricultural land (717.72 acre of agricultural land), 82.84 km of private plantation (505.24 acre of private plantation land), 2.16 km of riverine (14.41 acre of riverine area) and 23.302 km of government land (86.36 acre of government). A brief description about the type and use of land in the corridor is given in **Table 3.4**.

3.5 BIOLOGICAL ENVIRONMENT OF DISTRICTS BELONGING TO STUDY AREA

It is pertinent to mention that, in the present project, forest area/land covered under Forest (Conservation) Act, 1980 has been completely avoided with careful selection of route alignment. Therefore, diversion of forest land is not involved in the project.

In order to analyze the impacts and plan mitigation measures, it is imperative to study baseline information for transmission line and surrounding or proximity area as well (study area), which includes forest areas under the control of individual/community/village councils. The same has been described in ensuing paragraphs.

3.5.1 Forest Type

As per the 'A Revised Survey of the Forest Types of India' by Champion and Seth (1968) forests in the districts belonging to study area can be classified five Forest Type Groups which are further divided into 7 Forest Types and Plantation/Tree Outside Forest (TOF) (**Table 3.5**).

1 4 5 5 5 5 5 5 7 6		and in the study / ii ed		
Group	Sub-Group	Forest Type		
2-Tropical Semi-	2B-Northern Tropical Semi-	2B/C2 Cachar Semi-Evergreen Forest		
evergreen Forest	evergreen Forests	2/2S1 Secondary Moist Bamboo Brakes		
3-Tropical Moist	3C-North India Moist	3C/C3b East Himalayan Moist Mixed		
Deciduous Forest	Deciduous Forest	Deciduous Forest		
4-Littoral and	4D-Tropical Seasonal Swamp	AD /252 Factoria Mat Allundal Grandland		
Swamp Forest	Forest	4D/2S2 Eastern Wet Alluvial Grassland		
8-Subtropical	8B- Northern Subtropical Broad	8B/C1 East Himalayan Sub-Tropical Wet Hill		
Broad-Leaved Hill	Leaved Wet Hill Forest	Forest		
Forest	Leaved Wet Hill Forest	Tolest		
O Subtranical Dina		9/C2 Assam Sub-Tropical Pine Forest		
9- Subtropical Pine		9/C2/DS1 Assam Subtropical Pine		
Forest		Savannah		
		Plantation/Tree Outside Forest (TOF)		

Table 3.5: Forest types found in the Study Area

3.5.2 Forest Cover

Total forest cover in the districts belonging to study area is 16846.90 sq km, which is 88.60% of the project district's geographical area. In terms of forest canopy density classes, the districts belonging to study area have 905.27 sq km under Very Dense Forest, 6386.29 sq km under Moderately Dense Forest and 9555.34 sq km under Open Forest. The details of forest cover of districts belonging to study area are given below in **Table 3.6**.

Table 3.6: Forest Cover in Districts Belonging to Study Area

3.6 BIOLOGICAL ENVIRONMENT OF THE STUDY AREA (RoWs & SUBSTATIONS' VICINITY)

3.6.1 Floristics Elements

The study area for the floristic surveys has already been defined in the Chapter 1 which is defined as area in the proximity of the proposed transmission lines on both left and right sides, corridors of transmission line routes and substations. The description of the vegetation is based upon these observations and data collected around each site collected through transects as already mentioned above.

In general, the vegetation in and areas around sampling sites is characterized with two landforms valley and hills. Vegetation in valley region is comprised of Tropical moist and deciduous forest, while East Himalayan sub-tropical wet hill forests, and Secondary Moist Bamboo Brakes are prevalent in the hills.

A series of transects were identified along the routes of transmission line covering the corridors between the RoW of transmission line and substations. Details of transmission line and locations (transects) selected for phytosociological survey are as given in **Table 3.7.**

Table 3.7: Transmission Lines and Transects Locations for Vegetation Sampling

S. No.	Name of Transmission Line	Status	Distance Covered
1	Stringing of 2 nd circuit of 132 kV D/C Yaingangpokpi-Kongba Line – 32.75 km	Work completed	Approx. 5 km (From Tower-03 to 26)
2	Stringing of 2 nd circuit of 132 kV D/C Kakching-Kongba Line – 43.588 km	Work completed	Approx. 5 km (From Tower-02 to 23)
3	Renovation of Yurembum-Karong-Mao Section of 132 kV S/C Yurembum-Karong- Kohima Line - 91.0 km	Work completed	Approx. 10 km (Near Yurembum, Kangpokpi, Senapati, Karong, Maram an Taubi)
4	33 kV line from Andro to Langdum substation – 4.93 km	Work completed	Approx. 2 km (From DP-2 to SP-16, DP-9 to SP-56 and SP- 69 to FP-4)
5	33 kV line from Sanjenbam to Porompat substation – 3.59 km	Work completed	Approx. 3 km (From FP-1 to SP-41)
6	33 kV line from Sanjenbam to Napetpalli substation – 7.472 km	Work completed	Approx. 2 km (From AP-6 to AP-10 and SP-112 to FP-3)
7	33 kV line from Khoupum to Thangal substation – 46.6 km	Work completed	Approx. 45 km (Almost entire stretch as it is along Khoupum to Thangal road)
8	LILO of existing 33 KV Churachandrapur - Thankew at Tuilaphai – 0.342 km	Work completed	Approx. 0.3 km (From FP-1 to DP-4 and from DP-5 to FP-0)

3.6.1.1 Floral Diversity

As per field surveys and based upon secondary data and available information an inventory of 223 plant species in the study area has been prepared. Groupwise breakup of families, genera and species is given below.

Group	Angiosperms	Gymnosperms	Pteridophytes	Bryophytes	Total
Family	68	3	9	11	91
Genera	163	3	13	11	190
Species	192	3	14	14	223

A brief description of number of plant species recorded in various taxonomic groups is given in the following paragraphs.

a) Angiosperms

During the field surveys conducted in the study area 192 plant species of angiosperms belonging to 68 families were recorded (For detailed list see **Annexure I**). These include trees, shrubs, herbs and climbers. Herbaceous component comprises of 77 species, shrubs are 49 and trees are comprised of 66 species. Most common families recorded from the study area are

Orchidaceae, Poaceae, Fabaceae, Araceae and Solanaceae, Lauraceae, Acanthaceae, Asteraceae, Moraceae, and Polygonaceae.

b) Gymnosperms

Three species of gymnosperms recorded from the study area are:

S. No.	Family	Botanical name	
1	Cupressaceae	Platycladus orientalis (Syn. Thuja orientalis)	
2	Gnetaceae	Gnetum montanum	
3	Pinaceae	Pinus kesiya	

c) Pteridophytes:

During field survey fourteen species belonging to 9 families of Pteridophytes were recorded from the area:

S. No.	Family	Botanical Name
1	Aspleniaceae	Asplenium nidus
2	Dennstaedtiaceae	Pteridium aquilinum
3	Dryopteridaceae	Dryopteris ramosa
4	Equisetaceae	Equisetum diffusum
5	Gleicheniaceae	Dicranopteris linearis
6	Lygodiaceae	Lygodium flexuosum
7	Polypodiaceae	Drymoglossum piloselloides
8	Polypodiaceae	Lepidogramitis rostrata
9	Pteridaceae	Adiantum caudatum
10	Pteridaceae	Onychium siliculosum
11	Pteridaceae	Pteris vittata
12	Pteridaceae	Adiantum edgeworthii
13	Pteridaceae	Pieris eniformis
14	Selaginellaceae	Selaginella gracilis

d) Bryophytes

Fourteen species belonging to 11 families of Bryophytes were recorded from the study area as follows.

S. No.	Family	Botanical Name	
1	Andreaeaceae	Andreaea rupestris	
2	Anthocerotaceae	Anthoceros fusiformis	
3	Anthocerotaceae	Anthoceros laevis	
4	Bryaceae	Bryum mildeanum	
5	Jubulaceae	Frullania wallachiana	
6	Marchantiaceae	Marchantia linearis	
7	Marchantiaceae	Marchantia papiliata	
8	Marchantiaceae	Marchantia polymorpha	
9	Meteoriaceae	Papillaria crocea	
10	Pelliaceae	Pellia endiviifolia	
11	Plagiochilaceae	Plagiochila subtropica	
12	Polytrichaceae	Polytrichum abbreviatum	

S. No.	Family	Botanical Name
13	Ricciaceae	Ricciocarpos natans
14	Targioniaceae	Targionia hypophylla

3.6.1.2 Rare Threatened and Endangered Species

Conservation status of plant species found in the **Study Area** was assessed using IUCN Red list of Threatened Species Version 2020.3 (accessed in February 2021) and Botanical Survey of India Red Data Book. Out of 223 species reported from the study area only 79 species were accessed by IUCN Red list of Threatened Species Version 2020.3. Out of 79 plant species only 1 species i.e. *Dipterocarpus retusus* is listed as under Endangered (EN) category. All the plant species assessed by IUCN Red list of Threatened Species Version 2020.3 are listed under "Least Concern' category (**Table 3.8**).

Table 3.8: RET Plant Species Reported from Study Area

79	Zingiberaceae	Globba marantina	LC

3.6.1.3 Vegetation Profile of the Sampling Area

During the field surveys vegetation profile of the study area i.e., areas along the transmission and distribution lines were studied. Based upon these observations the information of vegetation along these transmission transmission and distribution lines is given in the table below.

S. No.	Name of Transmission Line	Vegetation Profile
1	Stringing of 2 nd circuit of 132 kV D/C Yaingangpokpi-Kongba Line	Since the work involved stringing of 2 nd circuit in the already existing line therefore, vegetation profile of the line was not studied in detail.
2	Renovation of Yurembum- Karong-Mao Section of 132 kV S/C Yurembum-Karong-Kohima Line	Since the work involved renovation of the already existing line therefore, vegetation profile of the line was not studied in detail.
3	Stringing of 2 nd circuit of 132 kV D/C Kakching-Kongba Line	Since the work involved stringing of 2 nd circuit in the already existing line therefore, vegetation profile of the line was not studied in detail.
4	33 kV line from Andro to Langdum substation	Most part of the line is under paddy fields. Some part of the line on the hilllocks lies on scrub land mainly comprised of bamboo bushes and grass species like, Bambusa balcooa, Dendrocalamus hamiltonii, Saccharum spontaneum, Arundinella nepalensis, Eragrostis amabilis, Thysanolaena latifolia, etc. Among the tree species Albizzia lebbek, Artocarpus chaplasha, Bauhinia variegata, Toona ciliata, Celtis cinnamonea, Dillenia indica, Emblica officinalis, Ficus hispida, Sapium baccatum, Schima wallichii, Urena lobata, Zizphus numularis, are common in the area mostly found near habitation or along the road. Shrubs in the area was represented by species like, Artemisia capillaris, Buddleja asiatica, Girardinia diversifolia, Lantana camara, Trevesia
		palmata, Justicia adhatoda, Sida rhombifolia are the shrub species recorded along the route of transmission line.
5	33 kV line from Sanjenbam to Porompat substation	The line is aligned along the village road. Small part of the line is aligned on paddy fields and scrub forest on hilllocks.

	r Gria Corporation of Inala Lta.	Final Environment Assessment Report - 2, Manipur
S. No.	Name of Transmission Line	Vegetation Profile
		Scrub forest in the route of line was mainly comprised of shrub species represented by species viz; Justicia adhatoda, Calamus erectus, Costus speciosus, Euphorbia pulcherrima, Murraya paniculata, Buddleja asiatica, Debregeasia longifolia, Girardinia diversifolia and Lantana camara.
		Herbs and grass species in the area was comprised of Achyranthes aspera, Acmella paniculata, Ageratum conyzoides, Bryophyllum pinnatum, Centella asiatica, Digitaria ciliaris, Phragmites karka, Pouzolzia fulgens, Saccharum spontaneum, Senna tora and Thysanolaena latifolia.
6	33 kV line from Khoupum to Thangal substation	Route of the Khoupum - Thangal line is aligned along the village road from Thangal to Khoupum sub stations passing through the hills. Poles of the line was erected on the edges of road.
		Vegetation along the RoW of the distribution line was mainly comprised of shrubs and grasses. Forests in the area are secondary in nature. On the slopes of hillocks Bamboo (Yushania hirsuta, Dendrocalamus hamiltonii and Dendrocalamus strictus) and Musa balbisiana are the dominant species.
		Along the road commonly found tree species are Acrocarpus fraxinifolius, Albizzia lebbek, Albizzia procera, Alnus nepalensis, Aquilaria agallocha, Artocarpus chaplasha, Artocarpus lakoocha, Bauhinia variegate, Bischofia javanica, Butea frondosa, Callicarpa arborea, Chukrasia tabularis, Kydia calycina, Hardwickia binata, Pinus kesiya, Sapindus rarak, Terminalia myriocarpa and Toona ciliata.
		Among shrub species the area Chromolaena odorata, Lantana camara, Calamus erectus, Justicia adhatoda, Ricinus communis, Sida rhombifolia, Thunbergia coccinea, Trevesia palmata, Urena lobata and are the frequently recorded species on the edges of road.
		Other than bamboo grass species along the route was mainly represented by <i>Thysanolaena latifolia</i> (Broom grass). Other herb and grass species recorded along the route of DL are <i>Achyranthes aspera</i> , <i>Achyranthes bidentata</i> , <i>Ageratum conyzoides</i> , <i>Begonia nepalensis</i> , <i>Bryophyllum</i>

	Ona corporation of maia Eta.	Tillal Elivirolilletti Assessittetti Neport 2, iviallipai		
S. No.	Name of Transmission Line	Vegetation Profile		
		pinnatum, Centella asiatica, Commelina pallida, Digitaria ciliaris, Eragrostis amabilis, Hedychium spicatum, Justicia mollissima, Persicaria chinensis, Phragmites karka, Pouzolzia fulgens, Saccharum spontaneum, Senna tora, Solanum americanum and Urtica dioica.		
7	LILO of existing 33 KV Churachandrapur - Thankew at Tuilaphai	In this small span of about 300m, the line passes along the road. The vegetation under the line is mainly comprised of bamboo bushes and shrub species like Lantana camara, Debregeasia longifolia, Girardinia diversifolia, Musa balbisiana, Chromolaena odorata, Oxyspora paniculata and Justicia adhatoda. On the slopes Yushania hirsuta is gregariously distributed. The edges of bamboo forest on the slope is covered with broom grass (Thysanolaena latifolia) and tree species like Altingia excelsa, Alstonia scholaris, Alnus nepalensis, Trema orientalis, Terminalia myriocarpa, Alangium chinense, Albizia procera, Callicarpa arborea, Toona ciliata, Phoebe paniculata, Kydia calycina, Sapindus rarak, etc.		
8	33 kV line from Sanjenbam to Napetpalli substation	The line passes through paddy fields and the poles are erected on the bunds.		

3.6.1.4 Economically Important Plant Species

The people of the area use wild plants in their daily life as food, medicine, fiber, fodder, fuel wood, timber, vegetables, fruits and various minor forest products. Agriculture is the major occupation in the project area and jhum cultivation is prevalent. Jhum paddy, WRC paddy, maize, soybean, and rapeseed/mustard are main crops cultivated. Among horticultural crops are pineapple, banana, orange, passion fruit and litchi. Among vegetable chili, colocasia, leafy vegetables, tapioca, pumpkin and ginger are common. During finalization of route of transmission lines, it has been ensured that they do not pass-through areas with good vegetation and avoiding any disturbance to the vegetation. Wherever it was unavoidable, it has been ensured that the damage to vegetation is minimal. Distribution lines also do not traverse through vegetated patches in the area as it runs along the bunds of agricultural field or road. Therefore, these lines are not expected to disturb good vegetation areas harbouring economically important plant species and thereby their impact on any income from the economically important plant species due to implementation of the instant project is not envisaged.

Wild Edible Plants

List of wild edible plants used by villagers in the study area was prepared from http://manenvis.nic.in/Database/WildEdiblePlants 2940.aspx; Gangte et.al

(2013); https://ethnobiomed.biomedcentral.com/articles/10.1186/s13002-016-0080-4 and the same is given at **Table 3.9**.

Table 3.9: Wild Edible Plant Species Used by Tribes in Study Area

S. No.	Family	Name of species	Common Name	Mode of Use
1	Vitaceae	Cissus adnata	Kongouyen	The leaves are used as vegetable.
2	Alismataceae	Alisama plantago	Kaothum	Cooked or fresh rhizome is eaten
3	Alismataceae	Sagittaria sagittifolia	Koukha	The petioles are cooked and eaten. The tubers are also eaten as cooked or raw.
4	Amaranthaceae	Asternanthera sessilis	Phakchet	The leaves with tender stems are used specially in chagempomba curry
5	Amaryllidaceae	Allium hookeri	Maroinapakpi	The whole plant used as vegetable and spices.
6	Amaryllidaceae	Allium ramosum	Maroi Nakuppi	The leaves are used as vegetable and as spices
7	Apiaceae	Centella asiatica	Peruk	He whole plant is cooked and used as curry
8	Apiaceae	Oenanthe javanica	Comprek	The plant is used in salad and cooked as curry.
9	Araceae	Alocasia cucullata	Pallukabi	The tuber is used as raw in salad and cooked petiole is used as vegetable.
10	Araceae	Alocasia macrorrhizos	Pan	Whole plant is used for curry.
11	Araceae	Colocasia gigantea	Yendem	The whole plant is generally used for vegetable.
12	Caryophylliaceae	Stellaria media	Yerum Keirum	The young leaves and shoots are used as vegetable.
13	Convolulaceae	Ipomoea aquatica	Kolamani	The whole plant is used in salads and cooked in curry.
14	Cycadaceae	Cycas pectinata	Yendang	The young tender leaves and male cone are used as vegetable.
15	Dioscoreaceae	Dioscorea glabra	На	The cooked or roasted root tubers are eaten.
16	Fabaceae	Crolalaria Juncea	U-Hawai matol	The stem with young tender leaves are used in salad.
17	Fabaceae	Leucaena leucocephala	Chigonglei angouba	Tender leaves, young fruits and seeds are used as raw or fry as vegetable.
18	Fabaceae	Neptunia oleracea	Ishing Ikaithabi	The young stems and leaves are eaten raw in salad and cooked.
19	Fabaceae	Parkia javanica	Yongchak	The flower is used in salad. The fruits are also used as vegetable as raw or cooked.
20	Fabaceae	Sesbania cannabinuss	Chuchurangmei	The young leaves and fruits are used as vegetable.
21	Fabaceae	Vicia sativus	Pikongjai	The young tender stems with leaves are used in salad by the people in rural areas.
22	Lamiaceae	Ocimum barilieum	Mayangba	The leaves and whole inflorescence are used as spices

S. No.	Family	Name of species	Common Name	Mode of Use
				for salad and curry.
23	Malvaceae	Hibiscus cannabinus	Saugri	The boiled leaves are used as curry.
24	Musaceae	Musa paradisiaca	Laphu	The stem, inflorescence and fruits are used as vegetable.
25	Nymphaeaceae	Euryale ferox	Thangjing	The young thorny leaves and petioles are used as fresh or cooked. Seeds with pulp are used as raw or cooked
26	Poaceae	Bambasa tuida		
27	Poaceae	Bambusa nutans	Sanebi	Young shoots from fresh plant are cooked or fermented shoots are used.
28	Poaceae	Dendrocalamus gigantanus	Meiribob	Yong shoots & fermented young shoots are used as vegetable.
29	Poaceae	Zizania latifolia	Eshing Kambong	The young stem with tender leaves are u
30	Polygonaceae	Polygonum flaccidum	Yelang	The young shoot and tender leaves are used as vegetable.
31	Polygonaceae	Rumex maritimus	Palang shak	The leaves are used as a vegetable.
32	Primulaceae	Lysimachia ovata	Kangoi	The plant is used as vegetable by the local people.
33	Saururaceae	Houttuynia cordata	Toningkhok	The fresh whole plant is used as spices for curry and salad
34	Zingiberaceae	Alpinia nigra	Pulei	The shoots with tender leaves are cooked.

Medicinal Plants

Plant species are used for various medicinal purposes for treating various ailments by local tribals. The list of plant species used for various medicinal purposes by locals and found in the study area was prepared from Khumbongmayum *et. al.* (2005), Lokendrajit *et. al.* (2012), Leishangthem and Sharma (2014), Yuhlung and Bhattacharyya (2016), and the same is given at **Table 3.10.**

Table 3.10: Plant species Used for Medicinal Purposes

S. No	Family	Scientific Name	Parts use	Medicinal values
1	Araceae	Acorus calamus	Rhizome	Cough, fever, itching
2	Asteraceae	Adenostem malavenia	Leaves	Fresh injuries & skin disease
3	Acanthaceae	Adhatoda vasica	Leaves & flower	Cough, fever, dysentery
4	Fabaceae	Albizia myriophylla	Root	Dog Bite
5	Araceae	Alocasia cucullata	Rhizome	Purify blood
6	Zingiberaceae	Alpinia allughas	Rhizome/ Root	Gas Formation (Flatulence)
7	Zingiberaceae	Alpinia galanga	Rhizome	Piles and Regulate blood circulation
8	Acanthaceae	Andrographis paniculata	Leaves	Chronic fever
9	Asteraceae	Artemisia nilagirica	Shoot & leaves	Mouth ulcer & dizziness
10	Liliaceae	Asparagus filicinus	Root	Dysentery & epilepsy

S.				sessifient Report - 2, Mullipul
No	Family	Scientific Name	Parts use	Medicinal values
11	Meliaceae	Azadiracta indica	Leaf	Malaria
12	Asteraceae	Blumea balsamifera	Leaf	Burning Sensation of Stomach
13	Papilionaceae	Butea monosperma	Leaves, bark,	Diarrhea and dysentery,
14	Asclepiadaceae	Calotropis gigantea	Shoot	Ring worm & leprosy
15	Brassicaceae	Cardamine hirsute	Whole plant except root	Diuretic, better urination
16	Caesalpiniaceae	Cassia alata	Leaves	Diabetes, skin diseases
17	Meliaceae	TYoona ciliata	Leaves	Skin diseases & poxes
18	Apiaceae	Centilla asiatica	Whole plant	Sore Throat/Hypertension

Timber yielding Tree species

Some of the timber yielding trees found in the study area are *Phoebe* hainesiana, *Gmelina arborea*, *Michelia champaca*, *Pinus kesiya*, *Tectona grandis*, *Terminalia myriocarpa*, *Dipterocarpus tuberculatus* and *Toona ciliata*.

3.6.2 Faunal Elements

The fauna of the state has been compiled with the help of secondary sources. Data was compiled from published literature Viz; The Environmental Information System (ENVIS) Centre, Manipur (http://manenvis.nic.in/ Database/Biodiversityof Manipur 3142.aspx) and Zoological Survey of India (ZSI). Manipur harbours a variety of wildlife distributed throughout the state. For management and preservation of wildlife in the State, the Department of Forests, Environment & Ecology and Wildlife has a full-fledged wildlife Wing under the Chief Wildlife Warden.

3.6.2.1 Mammals

As per the data compiled, 31 species of mammals belonging 18 families of 7 orders are reported from the districts belonging to study area. As per the International Union for Conservation of Nature (IUCN) Red List of Threatened Species, 2020-3, 7 species are in Endangered (EN) category, 4 species are in Near Threatened (NT) category, 7 species are in Vulnerable (VU) category and 13 species are in Least Concerned (LC) category. List of important mammals found in the districts belonging to study area alongwith their conservation status is given in **Table 3.11**. The classification and nomenclature of bird species is as per https://www.iucnredlist.org/.

Source: https://manenvis.nic.in/Database/BiodiversityofManipur_3142.aspx; https://avibase.bsc-eoc.org/; https://ebird.org/region/IN-MN

*Falco amurensis (Amur falcons), locally known as 'Akhuaipuina' the world's longest travelling raptors was also reported from the state. These amazing raptors travel one of the longest migration routes of all birds, up to 22,000 km

in a year. They arrive in north-east India from Siberia en route to their destination at Somalia, Kenya and South Africa.

In Manipur state, Puching village in Tamenglong district, known as a roosting site for the Amur falcons during their annual migration from their breeding grounds to warmer South Africa.

The birds are the least concern under the International Union for Conservation of Nature (IUCN) Red List, and the species is categorised under Schedule-IV of the Indian Wildlife Protection Act, 1972, and the Convention on Migratory Species, to which India is a signatory (which means it is mandatory to protect the birds).

Earlier these migratory raptors were reportedly killed in Manipur when they arrived in Tamenglong district to roost every winter. The efforts of the Manipur forest department and villagers of Tamenglong district ensured that not a single falcon was killed last year while on their way to South Africa from Siberia.

The migratory path of Amur falcons is tracked by different agencies like Wildlife Institute of India through tagging and traced though satellites (https://satellitetracking.eu/inds/showtable) and their migratory path in NE India is mainly through Wokha and Longleng districts of Nagaland and Tamenglong district of Manipur. During field survey and interaction with locals it was noted that neither the location of any sub station nor any route of transmission or distribution line falls within migratory path of Amur falcons.

3.6.2.3 Herpetofauna

As per the data compiled, 24 species of reptiles and 10 species of amphibians are reported from the districts belonging to study area. List of important herpetofauna found in the districts belonging to study area is given in **Table 3.13**.

3.6.3 Protected Areas

The protected area network in Manipur occupies 847.512 sq. km area, which constitute about 3.79% of the state's geographical area. The Protected Area Network includes 2 National Park (NP) and 6 Wildlife Sanctuaries (WLS). Out of these, 4 protected areas, Keibul Lamjao National Park, Shirui National Park, Khongjaingamba wildlife sanctuary and Kailam wildlife sanctuary falls in districts belonging to study area. However, the proposed transmission and distribution lines don't pass through any protected area. In the instant scheme, all such areas are completely avoided through careful route selection. Details of the protected areas are presented below in **Table 3.15**. Map showing location of all the protected areas in Manipur is given at **Figure 3.11**.

Table 3.15: Protected Area Network in Districts Belonging to Study Area

S. No.	Protecte	d Areas	District		Area (sq km)	Year of Notification	ESZ Area (sq km)	Year of ESZ Notification

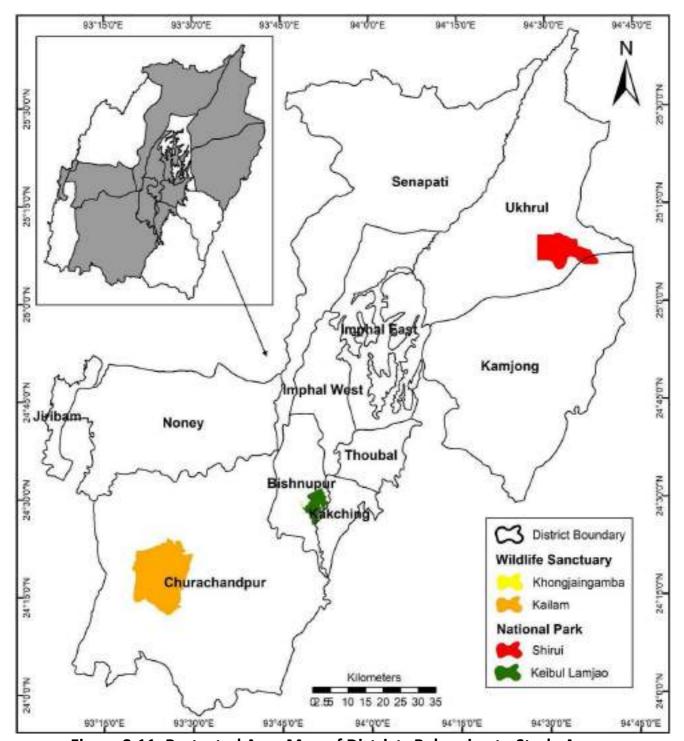

Figure 3.11: Protected Area Map of Districts Belonging to Study Area

The nearest subproject from Keibul Lamjao NP is Stringing of 2nd circuit of 132 kV D/C Kakching-Kongba Line. The nearest component of the TL from the NP

is Kakching Gantry, which is at a distance of approx. 14.4 km (refer **Figure 3.12**).

The nearest subproject from Shirui NP is Bay extension of existing 132/33 kV Ukhrul sub-station, which is at a distance of approx. 16.4 km (refer **Figure 3.13**).

The nearest subproject from Khongjaingamba WLS is Stringing of 2nd circuit of 132 kV D/C Kakching-Kongba Line. The nearest component of the TL from the WLS is Kakching Gantry, which is at a distance of approx. 20.8 km (refer **Figure 3.14**).

The nearest subproject from Kailam Wildlife Sanctuary is LILO of existing 33 kV Churachandpur to Thankew line at Tuilaphai. The nearest component of the DL from the Wildlife Sanctuary is Four Pole -1 at 33/11 kV Tuilaphai substation. The distance of Wildlife Sanctuary from Four Pole as well as substation is approx. 9.35 km (refer **Figure 3.15**).

Figure 3.14: Distance of Sub-Projects from Khongjaingamba Wildlife Sanctuary

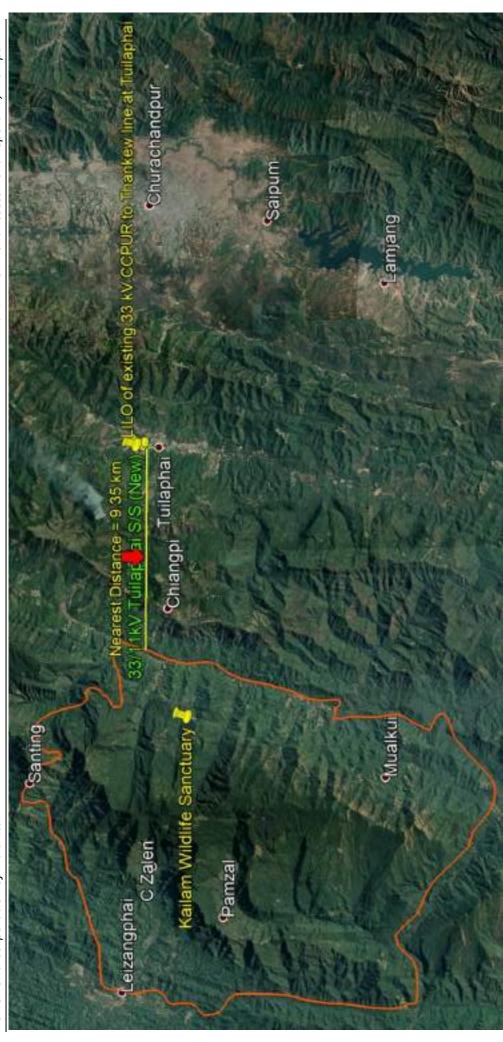

Figure 3.15: Distance of Sub-Projects from Kailam Wildlife Sanctuary

3.6.4 Community Reserves

Community Reserves are the biodiversity abundant lands that are privately or community-owned and are managed by the individual(s)/communities in possession of the area. These reserves allow for extraction of natural resources, the levels of which are governed by a multi-stakeholder Reserve Management Committee. Community Reserve Management Committee is to consist of five representatives nominated by the local Village Panchayat or the Gram Sabha, and one representative each from the State Department of Forest and Wildlife.

As per information available from State forest department and ENVIS Centre on Wildlife & Protected Areas, the State Government of Manipur had Notified 10 Community Reserves under section 36C(1) of the Wildlife Protection Act, 1972. Out of these 10 community reserves, 9 community reserves falls within the districts belonging to study area (refer **Table 3.16**).

Table 3.16: List of Community Reserves in District Belonging to Study Area

S. No.	Name of Community Reserve	Name of District	Year of Notification	Area (km²)
1	Chipeivao	Senapati	2018	0.64
2	Houphai	Senapati	2018	3.23
3	Shangneme	Senapati	2018	3
4	MekrimeiRu Kakramai Bu	Senapati	2018	72.46
5	Lungphu	Kamjong	2018	3.7
6	Pfunemai	Senapati	2016	2.1
7	Chiibvii & Veimairii	Senapati	2017	3.39
8	Baneevehdea Oinam Village	Senapati	2017	2.1
9	SofiiKhro Kodom Village	Senapati	2017	2.04

Source: https://forest.manipurforest.gov.in/sites/default/files/2020-03/Annual%20Report%202018-19.pdf

The landuse pattern of study area given at **Table 3.4** shows that any kind of forest is not involved in the study area. The only component of the project falling within the Senapati district is Renovation of Yurembum-Karong-Mao Section of 132 kV S/C Yurembum-Karong-Kohima Line. This is an existing line which as confirmed by the IA is outside community reserves.

The only component of the project falling within the Kamjong district is Augmentation of 1 existing 33/11 kV substation. Since augmentation of existing substation only require replacement especially of the main transformers and associated equipment with minimum or no disturbance to the existing power supply system therefore there will not be any impact of any magnitude on the community reserves due to instant project.

3.6.5 Sacred Groves and Community Conserved Areas (CCA)

India is well known for nature's worship, which plays an integral role in the live of many communities. Every aspect of religious and cultural practices is deeply rooted with the forest that helps in nature conservation. These types of forest bring the concept of "sacred groves". Generally, sacred groves are a tract of virgin forest, harbouring rich biodiversity and protected traditionally by the local communities as a whole. The area of scared groves ranges from few square meters to several hectares.

In ancient Manipuri culture, people worshipped the natural phenomena like the sun, the moon, the sky, the water and the fire. Although Hinduism invaded in the early Manipuri culture, the religious and cultural practice performed by the ancient meities were not change at all. The worshipping and protection of forest in the name of "Umanglai" because of their associated deities are still practice by the modern Manipuries preserving the ancient tradition till date. In Manipur, some of the forest patches are owned by some deity and conserved by the local people largely on the basis of religious beliefs and cultural practices. Such forests are known as "Umanglai". The beliefs and taboos associated with the Umanglais in the forest patches are restricted to any sort of disturbance of flora and fauna.

In Manipur, various ethnic groups have preserved and protected several forest patches and even individual trees or animals with the belief in nature's worship. As per available data, there are 166 sacred groves and community conserved areas in the districts belonging to study area (refer **Table 3.17**).

In the instant scheme, all such areas are completely avoided through careful route selection.

3.6.6 Important Bird & Biodiversity Areas (IBAs)

Bird Life International (<u>www.birdlife.org</u>) has identified 9 Important Bird & Biodiversity Areas (IBAs) in Manipur. These IBAs cover 1422.10 sq km area, which constitute about 6.37% of the state's geographical area. Out of these 9 IBAs, only 5 IBAs i.e. Ango or Anko Hills, Dzuku Valley, Kailam Wildlife Sanctuary, Loktak Lake and Keibul Lamjao National Park and Shiroi

Community Forest falls in project districts. Details of the IBAs are presented below in **Table 3.18**.

Table 3.18: Important Bird & Biodiversity Areas in Manipur

S. No.	IBA Code	IBA Name	Criteria	Important Species	Area (sq km)	District
1	IN430	Ango or Anko Hills	A1, A2	Pavo muticus, Tragopan blythii, Syrmaticus humiae, Aceros nipalensis, Heterophasia gracilis	400.00	Ukhrul
2	IN431	Bunning Wildlife Sanctuary	A1, A2	Aceros nipalensis, Heterophasia gracilis	115.80	Tamenglong
3	IN432	Dzuku Valley	A1, A2	Tragopan blythii, Syrmaticus humiae, Apus acuticauda, Yuhina bakeri, Stachyris roberti, Trochalopteron austeni, Trochalopteron virgatum, Heterophasia gracilis, Sibia waldeni	25.00	Senapati
4	IN433	Jiri - Makru Wildlife Sanctuary	A1	Pavo muticus, Asarcornis scutulata, Aceros nipalensis	198.00	Tamenglong
5	IN434	Kailam Wildlife Sanctuary	A1, A2	Syrmaticus humiae, Aceros nipalensis, Heterophasia gracilis	187.50	Churachandpur
6	IN435	Loktak Lake and Keibul Lamjao National Park	A1, A4iii	Dendrocygna javanica, Aythya baeri, Grus antigone, Leptoptilos javanicus, Clanga clanga, Haliaeetus leucoryphus, waterbirds	240.00	Bishnupur, Imphal West, Kakching
7	IN436	Shiroi Community Forest	A1, A2	Tragopan blythii, Syrmaticus humiae, Aceros nipalensis, Heterophasia gracilis	50.00	Ukhrul
8	IN437	Yangoupokpi - Lokchao Wildlife Sanctuary	A1	Pavo muticus	184.80	Tengnoupal
9	IN438	Zeilad Lake Sanctuary	A1	Asarcornis scutulata	21.00	Tamenglong

Source: http://www.birdlife.org/datazone/country/india

International Bird Areas are achieved through the application of quantitative ornithological criteria, grounded in up-to-date knowledge of the sizes and trends of bird populations. The Global criteria are as follows:

A1. Globally threatened species

Criterion: The site is known or thought regularly to hold significant numbers of a globally threatened species, or other species of global conservation concern.

A2. Restricted-range species

Criterion: The site is known or thought to hold a significant component of a group of species whose breeding distributions define an Endemic Bird Area (EBA) or Secondary Area (SA).

A4iii. Biome-restricted species

Criterion: The site is known or thought to hold congregations of ≥1% of the global population of one or more species on a regular or predictable basis.

The avifauna species found in the Ango or Anko Hills, Dzuku Valley, Kailam Wildlife Sanctuary and Shiroi Community Forest are resident species, while Loktak Lake and Keibul Lamjao National Park IBA is home to migratory bird species. However, the proposed transmission and distribution lines do not pass through any of these IBAs. In the instant scheme, all such areas were completely avoided through careful route selection. Moreover, the incidence of avian hazards is rare due to the distance between the conductors, however, as an additional measure to prevent any avian hazard, bird guards/ anti perch devices are integral part of tower design.

The nearest component of the project from the Ango or Anko Hills and Shiroi Community Forest IBAs in Ukhrul district is the existing 132/33 kV Ukhrul substation. The distance from the sub-station to the Ango or Anko Hills IBA is approx. 31 km, while the distance from the sub-station to the Shiroi Community Forest IBA is approx. 15 km (**Figure 3.16**).

The nearest component of the project from the Kailam Wildlife Sanctuary IBA in Churachandpur district is the existing 33/11 kV Tuilaphai sub-station. The distance from the sub-station to the IBA is approx. 23.5 km (**Figure 3.17**).

The nearest component of the project from the Loktak Lake and Keibul Lamjao National Park IBA in Bishnupur, Imphal West, Kakching districts is the existing 33/11 kV Nambol sub-station. The distance from the sub-station to the IBA is approx. 5.9 km (**Figure 3.18**).

Figure 3.18: Distance of Components of Project from Loktak Lake and Keibul Lamjao National Park IBA

3.6.7 Wetland

As per the National Wetland Atlas of Manipur, the estimated wetland area of the state is 63616 ha area, which is 2.85% of total geographic area of the state. It includes 541 small wetlands (<2.25 ha) also. Total number of wetlands present in the State is 708.

Loktak lake (including Keibul Lamjao, Sana pat, Laphu pat & Thaunamcha pat) is most important wetland area of Manipur state. Southern part of Loktak lake is declared as Keibul Lamjao National Park (KLNP). Due to its rich biodiversity & socio-economic importance the lake has been designated as one of the 25 Ramsar Site in India for the identifying wetlands of international importance under the Ramsar Convention in 1990. Geographical area of the lake is 24,672 ha (refer to **Figure 3.19**).

The lake falls in the district belonging to study area i.e. Bishnupur, however, extension of existing 33/11 kV substation at Nambol is the only component of the instant project that lies in the district. The aerial distance of the substation from the lake is more than 5 km (refer **Figure 3.18**). The aerial distance of rest of the components of the instant project is more than 10 km. Therefore, in the instant scheme, Loktak Lake has been completely avoided through careful route selection.

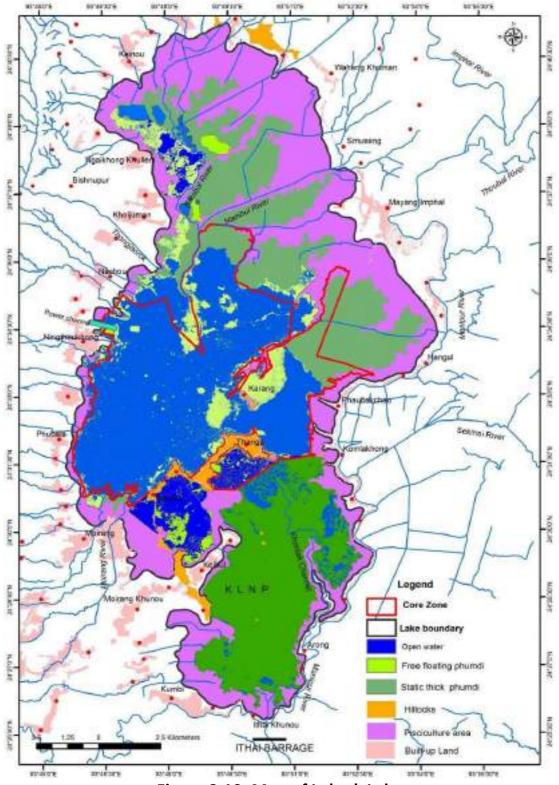

Figure 3.19: Map of Loktak Lake

3.7 SOCIO-ECONOMIC ENVIRONMENT

For sustainable development, it is important to understand social and economic conditions of the community in the region, impacts of development on the community, measures to mitigate negative impacts and enhance the positive impacts. For new development initiatives, socio economic assessment plays an important role to ensure community participation and their acceptance of the development activity. It also helps in planning the activities for local area development. The population of Manipur as per census 2011 was 28,55,794 out of which 14,38,586 were males and 14,17208 were females.

Manipur is inhabited by three major ethnic group - the Meiteis including Meitei Muslim in the valley and the Nagas and the Kuki-Chin-Mizo tribes in the hills. Peoples are predominantly Mongoloid and speak Tibeto-Burmese languages. The Meiteis constitute the majority population in the state and are a fairly homogenous people. They are divided into seven clans (salais): Manganz, Luwang, Khuman, Angom, Moirang, Chenglai (Sarang-Leishangthem) and Khaba-Nganba. The Muslims, known locally as Meitei Pangans are an economically significant though small-sized community. There are no followers of Buddhism in the valley. Christianity, which was introduced by the British, was embraced only by the hill tribes. The Meiteis and other non-tribal groups constitute about 66 per cent of the total population of the state. These groups speak Manipuri.

33 tribal groups are recognised by the Government of India as Scheduled Tribes (STs), seven Scheduled Castes (SCs), and the Meiteis, the Pangans, and 'others' as separate population categories. The recognized Naga groups are the Anal, Chiru, Chothe, Kabui, Kacha Naga, Koireng, Kairao, Lamkang, Mao, Maram, Maring, Monsang, Mayon, Sema and Tangkhul who together form 18.7 per cent of the state's population. The Thangal, Liangmeiand Tharao, also recognized as Naga tribes, are yet to be listed as STs. In 2003, the Poumei were recognized as a separate tribe. The recognized tribes include Thadou, Zou, Vaiphei, Simte, Paite, Aimol, Gangte, and Ralte. Some groups like the Simte, Suhte and Ralte identify themselves as Zomi. Among the other prominent tribes are the Kom and the Hmar.

Area doesn't fall in Sixth Schedule of the constitution providing for the administration of tribal areas in Assam, Meghalaya, Tripura and Mizoram to safeguard the rights of the tribal population in these states nor it falls in Fifth Schedule of the constitution dealing with the administration and control of Scheduled Areas as well as of Scheduled Tribes residing in any State other these four States. Under Article 371 C of Constitution of India provides special

provision to the State of Manipur for the Constitution and functions of a committee of the Legislative Assembly of the State consisting of members of that Assembly elected from the Hill Areas of the State. Under this Manipur (Hill Areas) District Council Act was enacted in 1971 which has provisions similar to those contained in the Sixth Schedule and has established six Autonomous Hill District Councils, covering 5 hill districts of the State. These Autonomous Hill District Councils (AHDC) are empowered to maintain and manage the property: movable and immovable, and institutions under their jurisdiction (e.g. in the field of agriculture, animal husbandry, community development, social and tribal welfare, village planning, management of any forest except RF, regulation of the Jhum /shifting cultivation or any other matter.) Under this act, the administrations of the Tribal areas is vested in village/district council under supervision of concerned DC at local/district level and Hill area Committee at State level. All activities sited in AHDC area needs their consent.

Bishnupur district has a population of 2,37,399. The district has a sex ratio of 999 female per 1000 male, which is better than the corresponding National figures. The population of Schedule Caste and Schedule Tribes constitute 9.3% and 1.4% respectively of the total population (Table 3.19). Aimol and Chothe are the tribes residing in the district. Aimol is listed under the Kuki tribes found living both in Assam and Manipur. They speak Aimol language, classified under Kuki-Chin-Mizo language. They are based around Loktak Lake. They practice slash and burn agriculture and are primarily Christians. Chothe tribes speak a Kuki-Chin dialect. Their main occupations are cultivation, livestock rearing, blacksmith and weaving. They are divided into seven clans. The literacy rate of the district stands at 75.85%. (Table 3.20). Work participation rate is about 46.3%, out of which 57.1% are male workers and 42.9% are female workers. Among the total work force, 69.5% are Main Workers and 30.5% are Marginal Workers (Table 3.21). About 34.7% workers are cultivators and 6.2% are agricultural labourers. About 51.8% of work force is engaged in other than agricultural activities and 7.3% are household industrial workers (Table 3.22).

Churachandpur (including Pherzwal) district has a population of 274,143 and has a sex ratio of 975 female per 1000 male. The population of Schedule Caste and Schedule Tribes constitute 0.2% and 92.9% respectively of the total population (Table 3.19). Chirus, Gangte, Hamar and Koms are the tribes residing in the district. Chirus are one of the earliest inhabitants of Manipur and Assam. It was recognized as a Scheduled Tribe in 1956. They are found in four districts of the state, in Tamenglong, Kangpokpi, Churachandpur and Thoubal district. They speak Chiru dialect, one of Kuki-Chin-Naga languages. Gangte are one of the major Kuki-Chin tribes with Christianity being their apex

religion. They are also one of the educated and a developed lot with 99% literacy rate. Hamar belong to Kuki-Chin-Mizo group. Agriculture and weaving are their main occupations. They adopted Christianity from 1910. Hmar have their village administration consisting of Lal (Chief), Khawnbawlupa (chief minister), Khonbols (ministers). Koms speak language similar to that of Koireng, Aimol and Chiru and closely related to the Hmar. Christianity is its main religion. Some major festivals of Koms are Seling, Hlungphun, Belam and Lamkut. The literacy rate of the district stands at 82.8 %. Agriculture has been playing a predominant role for contributing the economic growth of the district due to nonavailability of infrastructure facilities like power, skilled labour, transport and communication, financial institutions etc and also there is practically no big industries worth naming in the district or state. The total number of employment was estimated to 75.8% in the public sectors and 6.2 % in the private sectors of the district showing an extremely narrowed employment avenue in private sector. Work participation rate is about 44.7%, out of which 57.5% are male workers and 42.5% are female workers. Among the total work force, 73.2% are Main Workers and 26.8% are Marginal Workers (Table 3.21). About 58.6% workers are cultivators and 4.3% are agricultural labourers. About 37.1% of work force is engaged in other than agricultural activities including 2.7% household industrial workers (Table 3.22).

Imphal East (including Jiribam) district has a population of 456,113. The district has a sex ratio of 1017 female per 1000 male, which is better than the corresponding National figures. The population of Schedule Caste and Schedule Tribes constitute 3.5% and 6.1% respectively of the total population (Table 3.19). Luwang (Loowang), Khuman (Khooman), Moirang and Meithei (Meitei) are the notably different tribes occupying the different portions of the Valley. The literacy rate of the district stands at 81.9% (Table 3.20). Agriculture is the main occupation of the people. The main food crops are paddy, potato and vegetables. Among the cash crops are sugar cane, maize, pulse, oil seed and other vegetables etc. Besides these spices like chilli, onion, ginger, turmeric and coriander of very good quality are grown in the district. The soil and climate favour for mass plantation of horticulture products in the district. Therefore, horticulture products have been acquiring popularity with the people in the district. Apart from this, handloom and handicraft goods are the important cottage and home industries taken up by the people. Handloom products like, Wangkhei Phi, Lashing Phi and Phanek and its different designs made by these weavers are in great demand both in the home and outside markets as well. This occupation provides employment to almost women in the district. This can certainly be developed in the district by upgrading the skills of artisans introducing of improved looms and provision of cheap yarns. Work participation rate is about 42.7%, out of which 60.3% are male workers

and 39.7% are female workers. Among the total work force, 74.6% are Main Workers and 25.4% are Marginal Workers (**Table 3.21**). About 19.2% workers are cultivators and 6.5% are agricultural labourers. About 66.1% of work force is engaged in other than agricultural activities and 8.2% are household industrial workers (**Table 3.22**).

Imphal West district has a total population of 517,992 as per the census of 2011. The district has the distinction of having a positive sex ratio of 1031 female per 1000 male. 4.7% of the population belongs to Schedule Tribes while Schedule Castes constitute around 3.2% of the population (Table 3.19). Luwang (Loowang), Khuman (Khooman), Moirang and Meithei (Meitei) are the notably different tribes occupying the different portions of the Valley. The literacy rate of the district is 86.1% (Table 3.20). Majority of population i.e. 55.51% reside in urban areas. Imphal west being a largely urban district is comparatively more industrialized than rest of the state. However, majority of the industries located in the district are cottage industries like Handloom and Handicrafts. Work participation rate is about 41.2%, out of which 60.2% are male workers and 39.8% are female workers. Among the total work force, 77.8% are Main Workers and 22.2% are Marginal Workers (Table 3.21). About 18.1% workers are cultivators and only 3% are agricultural labourers. About 71.9% of work force is engaged in other than agricultural activities and 6.9% are household industrial workers (Table 3.22).

Thoubal (including Kakching) district has a population 422,168. The district has the distinction of having a positive sex ratio of 1002 female per 1000 male. 0.4% of the population belongs to Schedule Tribes while Schedule Castes constitute around 9.6% of the population (Table 3.19). Chirus is the tribe residing in the district. Chirus are one of the earliest inhabitants of Manipur and Assam. It was recognized as a Scheduled Tribe in 1956. They are found in four districts of the state, in Tamenglong, Kangpokpi, Churachandpur and Thoubal district. They speak Chiru dialect, one of Kuki-Chin-Naga languages. It has population density of 818 people per sq. kms. and ranks as the 2nd most densely populated district in the state. Agriculture is the most important source of livelihood for the people of the district. More than 70 per cent of the total population of the district is directly or indirectly depended on agricultural activities. The valley is fertile and the topography of the district provides good opportunity for natural as well as artificial irrigation. Rice accounts for above 90 percent of the total land area under cultivation. In respect of rice production, Thoubal accounts for 25 percent of the total production of rice in Manipur. The Kakching belt which provides more than 50 percent of the total rice exports of the district may be rightly termed as the 'rice basket of Manipur'. Other crops grown in the district are sugarcane,

oilseeds, maize, potatoes, pulses, chilies, vegetable etc. The district is the largest producer of sugarcane in Manipur and cultivation is mainly confined to Thoubal, Wangjing, Kakching, Kakching Khunou and Wabagai. Handloom is an important and traditional activity in the district. The main handloom products are cotton and polyester clothes like- saris, made-up bed sheet, curtain, towel, table cloth, fashion garments with intricate designs, lashingphee (cotton tweed clothes) etc. The district is also famous for its kouna craft. Kouna craft has also been taken up by the people in the district as a gainful economic activity due to high market demands. The district also has a fair amount of activities in sericulture which generates employment for both males and females. Work participation rate is about 46.3%, out of which 56.0% are male workers and 44.0% are female workers. Among the total work force, 68.3% are Main Workers and 31.7% are Marginal Workers (Table 3.21). About 44.3% workers are cultivators and only 9.1% are agricultural labourers. About 39.8% of work force is engaged in other than agricultural activities and 6.8% are household industrial workers (Table 3.22).

Senapati (including Kangpokpi) district is an entirely rural economy and agriculture is the main occupation of the people in the district. The district has a population of 4,79,148. The district has a sex ratio of 937 female per 1000 male. The population of Schedule Caste and Schedule Tribes constitute 0.2% and 87.5% respectively of the total population (Table 3.19). Aimol, Gangte, Kharam, Koirao, Kom are the tribes residing in the district. Aimol is listed under the Kuki tribes found living both in Assam and Manipur. They speak Aimol language, classified under Kuki-Chin-Mizo language. Gangte are one of the major Kuki-Chin tribes with Christianity being their apex religion. They are also one of the educated and a developed lot with 99% literacy rate. Kharam are settled in 7 villages, of which Kharam Pallen village is their main biggest settlement. They were recognized as a scheduled tribe in 2003. Most of them follow Christianity. Koirao also calls themselves 'Thangals'. They are close-knit and live in hill villages mostly located along the National Highway No. 2. Thangals generally dress in bright and colorful attires. Koms speak language similar to that of Koireng, Aimol and Chiru and closely related to the Hmar. Christianity is its main religion. Some major festivals of Koms are Seling, Hlungphun, Belam and Lamkut. Paddy, Maize, Cabbage, Potato, cereals are the main crops of the district. Both jhum and terrace cultivation is done on the hill slopes of the district. Rice accounts for more than 90 percent of the total land area under cultivation. Although the average land holding is one of the lowest in India, yield per acre is comparatively high. The most important industry from the point of view of employment potential and volume of output is the handloom and handicraft industry, which is mainly run on a small-scale household industry basis. Moreh, which is 110 km away from Imphal, has emerged as an international trade centre with the inauguration of

Indo-Myanmar Border Trade 1995. It is believed to be the prospective economic bridge between India and the other industrially developing South East Asian countries. Work participation rate is about 48.8%, out of which 53.1% are male workers and 46.9% are female workers. Among the total work force, 79.5% are Main Workers and 20.5% are Marginal Workers (**Table 3.21**). About 80.7% workers are cultivators and only 2.7% are agricultural labourers. About 15.5% of work force is engaged in other than agricultural activities and 1.2% are household industrial workers (**Table 3.22**).

Tamenglong (including Noney) district has a population of 140,651. The district has a sex ratio of 943 female per 1000 male. The population of Schedule Caste and Schedule Tribes constitute 0.0% and 95.7% respectively of the total population (Table 3.19). It has population density of 32 people per sq. km which is lowest in the state. The economy of the district is basically agrarian with paddy as major crop. 76 percent of the total area under paddy cultivation in the district is under jhum while permanent terrace occupies 6.0 percent. The economic status of the households in the district as per the latest records of the Food and Civil Supplies Department, Govt. of Manipur, 30.56 percent of the households are BPL families. The district has hardly any industrial activity except for a small number of registered small industrial units. Poultry and livestock farming is an important economic activity of the people in this hill district. The livestock and poultry production in the district is fairly high. The district stands 4th in the State in respect of poultry production with 12 percent of total poultry production in the State. Work participation rate is about 50.2%, out of which 52.7% are male workers and 47.3% are female workers. Among the total work force, 79.2% are Main Workers and 20.8% are Marginal Workers (Table 3.21). About 75.7% workers are cultivators and only 1.8% are agricultural labourers. About 20.7% of work force is engaged in other than agricultural activities and 1.8% are household industrial workers (Table 3.22).

MAJOR FEATURES OF FINAL ROUTE

4.1 INTRODUCTION

Environmental impact of transmission and distribution (T&D) line projects are not far reaching and are mostly localized to RoW. However, T&D project has some effects on natural and socio-culture resources. These impacts can be minimized by careful route selection. To minimize these possible impacts, MSPCL & IA at the system planning stage itself try to avoid ecological sensitive areas like forest. Wherever such infringements are substantial, different alternative options are considered to select most viable route alignment. For further optimization of route modern survey techniques/tools like GIS, GPS aerial photography is also applied. Introduction of GIS and GPS in route selection result in access to updated/latest information, through satellite images and further optimization of route having minimal environmental impact. Moreover, availability of various details, constraints like topographical and geotechnical details, forest and environmental details etc. help in planning the effective mitigate measures including engineering variations depending upon the site situation/location. The route/site selection criteria followed is detailed below in the ensuing paragraphs.

4.2 ENVIRONMENTAL CRITERIA FOR ROUTE SELECTION

For selection of optimum route, the following points are taken into consideration:

- i. The route of the proposed lines does not involve any human rehabilitation.
- ii. Any monument of cultural or historical importance is not affected by the route of the line.
- iii. The proposed route does not create any threat to the survival of any community with special reference to Tribal Community.
- iv. The proposed route does not affect any public utility services like playgrounds, schools, other establishments etc.
- v. The line route does not pass through any sanctuaries, National Park etc.
- vi. The line route does not infringe with area of natural resources.

In order to achieve this, MSPCL undertook route selection for individual transmission & distribution lines in close consultation with representatives of concerned Forest Department and the Department of Revenue. Although under National law, MSPCL has the right of eminent domain, yet alternative alignments are considered keeping in mind the above-mentioned factors

during site selection, with minor alterations often added to avoid environmentally sensitive areas and settlements at execution stage.

- As a rule, alignments are generally cited away from major towns, whenever possible, to account for future urban expansion (refer Figure 4.1 to Figure 4.7 and Map 1 to Map 4 of final route of all T&D network).
- Similarly, forests are avoided to the extent possible, and when it is not possible, a route is selected in consultation with the local Divisional Forest Officer, that causes minimum damage to existing forest resources.
- Alignments are selected to avoid wetlands and unstable areas for both financial and environmental reasons.

In addition, care is also taken to avoid National parks, Sanctuaries, Ecosensitive zones, Tiger reserves, Biosphere reserves, Elephant corridors and IBA sites etc. Keeping above in mind the routes of proposed lines under the project have been so aligned that it takes care of above factors. As such, different alternatives for transmission lines were studied with the help of Govt. published data like Forest atlas, Survey of India etc. and Google Maps to arrive at the most optimum route, which can be taken up for detailed survey and assessment of environmental & social impacts for their proper management.

Similarly, the TOR for detailed survey using modern tool like GIS/GPS also contained parameters to avoid/reduce environmental impact while deciding the final route alignment. The major objectives for detailed survey that are part of contract are summarized below:

- (i) The alignment of transmission line shall be most economical from the point of view of construction and maintenance.
- (ii) Routing of transmission line through protected and reserved forest area should be avoided. In case it is not possible to avoid the forest or areas having large trees completely then keeping in view of the overall economy, the route should be aligned in such a way that cutting of trees is minimum.
- (iii) The route should have minimum crossing of major rivers, railway lines, and national/state highways, overhead EHP power lines and communication lines.
- (iv) The number of angle point shall be kept to a minimum.
- (v) The distance between the terminal points specified shall be kept shortest possible, consistent with the terrain that is encountered.

- (vi) Marshy and low line areas, river beds and earth slip zones shall be avoided to minimum risk to the foundations.
- (vii) It would be preferable to utilize level ground for the alignment.
- (viii) Crossing of power line shall be minimal. Alignment will be kept at a minimum distance of 300 meters from power lines to avoid induction problems on the lower voltage lines.
- (ix) Crossings of communication lines shall be minimized and it shall be preferably at right angle, proximity and paralyses with telecom lines shall be eliminated to avoid danger of induction to them.
- (x) Area subjected to flooding searches streams shall be avoided.
- (xi) Restricted areas such as civil and military airfield shall be avoided. Care shall also be taken to avoid the aircraft landing approaches.
- (xii) All alignment should be easily accessible both in dry and rainy seasons to enable maintenance throughout the year.
- (xiii) Certain areas such as query sites, tea, tobacco and saffron fields and rich plantation, gardens and nurseries that will present the owner problems in of right of way and leave clearance during construction and maintenance should be avoided.
- (xiv) Angle point should be selected such that shifting of the point within 100 m radius is possible at the time of construction of the line.
- (xv) The line routing should avoid large habitation densely populated areas to the extent possible.
- (xvi) The area requires special foundations and those prone to flooding should be avoided.
- (xvii) For examination of the alternatives and identification of the most appropriate route, besides making use of information/data/details available/extracted through survey of India topographical maps and computer aided processing of NRSA satellite imagery, the contractor shall also carry out reconnaissance/preliminary survey as may be required for the verification and collection of additional information/data/details.
- (xviii) The contractor shall submit his preliminary observation and suggestion along with various information/data/details collected and also processed satellite imagery data, topographical map data marked with alternative routes etc. The final evaluation of the alternative routes shall be conducted by the contractor in consultation with owners' representatives and optimal route alignment shall be proposed by the contractor. Digital terrain modeling using contour data from

topographical maps as well as processed satellite data shall be done by the contractor for the selected route. A flythrough perspective using suitable software(s) shall be developed or further refinement of the selected route. If required site visit and field verification shall be conducted by the contractor jointly with the owners' representatives for the proposed route alignment.

(xix) Final digitized route alignment drawing with the latest topographical and other details/features including all river railway lines, canals, roads etc. up to 8 Kms on both side of selected route alignment shall be submitted by the contractors for owner's approval along with report containing other information / details as mentioned above.

The route finalized after detailed survey by contractor follows all the environmental criteria laid down for consideration of route selection. The major features encountered in the finalized route are elaborated in the ensuing paragraphs.

4.2.1 Transmission Lines

The transmission line scope includes following subprojects:

- i. Stringing of 2nd circuit of 132 kV D/C Kakching-Kongba Line 43.588 km;
- ii. Stringing of 2nd circuit of 132 kV D/C Yaingangpokpi-Kongba Line 32.75 km;
- iii. Renovation of Yurembum-Karong-Mao Section of 132 kV S/C Yurembum-Karong-Kohima Line 91.0 km

Since it is proposed to undertake stringing of 2nd circuit/renovation activities in existing 132 kV above said transmission lines, no alternative route have been explored in the instant subproject. In case of 132 kV D/C Kakching-Kongba Line and 132 kV D/C Yaingangpokpi-Kongba Line, it is proposed to undertake only stringing of 2nd circuit in the existing 132 kV lines of MSPCL which were constructed earlier as single circuit line on double circuit tower considering future provision of up-gradation of the line as double circuit. Since, the activity includes only stringing of electrical conductor in the existing towers within the already available RoW, no interference to the surrounding environment is envisaged.

Similarly, in case of renovation of Yurembum-Karong-Mao Section of 132 kV S/C Yurembum-Karong-Kohima Line, it involves activities like replacement of insulators, strengthening cross arm of tower, change of tower parts & change of conductor etc. only within the already available RoW without any civil

construction work and therefore, no major environmental and social issues are anticipated.

4.2.2 Distribution Lines

The distribution line scope includes following subprojects:

- i. 33 kV line from Andro to Langdum 4.93 km;
- ii. 33 kV line from Sanjenbam to Porompat 3.59 km;
- iii. 33 kV line from Sanjenbam to Napetpalli 7.472 km;
- iv. 33 kV line from Khoupum to Thangal 46.60 km;
- v. LILO of existing 33 kV Churachandpur Thankew line at Tuilaphai 0.342 km

The proposed distribution lines connect 2 substations in close vicinity and are having line length of less than 10 km (except Khoupum to Thangal D/L, which is of length 46.60 km), thus, having negligible environment and social impacts including no involvement of any forest area. Hence, alternative has been studied for the only distribution line which is more than 10 km in length.

For changes in scope of work with respect to IEAR scope i.e. changes in the route alignment based upon alternatives studies and detailed survey for transmission and distribution line is given is **Table 4.1**.

Table 4.1: Change in Scope of Work w.r.t. IEAR

		<u> </u>	
S. No.	Scope as per IEAR	Current Status	Justification/ Remarks
Tran	smission Component		
1	Stringing of 2 nd circuit of 132 kV D/C Kakching- Kongba Line – 43.588 km	No change in scope of work	Only stringing of 2 nd circuit has been undertaken therefore there is no change in scope.
2	Stringing of 2 nd circuit of 132 kV D/C Yaingangpokpi- Kongba Line – 32.75 km	No change in scope of work	Only stringing of 2 nd circuit has been undertaken therefore there is no change in scope.
3	Renovation of Yurembum- Karong-Mao Section of 132 kV S/C Yurembum-Karong- Kohima Line - 91.0 km	No change in scope of work	Only renovation has been undertaken therefore there is no change in scope.

4.2.3 Sub-stations

For sub-station, site selection analysis of 2-3 alternatives sites is usually carried out based on environment and social aspects and technical requirement. Such analysis considers various site-specific parameters that include availability of infrastructure facilities such as access roads, water, distance from railheads, type of land (Government/ revenue/private land); social impacts such as number of families getting affected; CPR including feasibility of acquisition. The finalization of substation land is done based on above analysis and site visit/verification. The social aspects are provided due

weightage after technical requirement in decision making for selection/finalization of land for substation.

In the instant case also land for all the proposed substations, either in possession of MSPCL or identified for purchase on willing seller –willing buyer basis were acquired as per above mentioned analysis and site visit/verification. Also, as per the provisions of ESPPF, all land received from MSPCL and direct purchases were reviewed/approved by a broad-based committee comprising representatives of different sections including those from the IA and Govt. of Manipur.

The finalized location of transmission and distribution substations is given below in **Table 4.2**.

Table 4.2: Finalized Location of Transmission & Distribution Substation

4.3 MAJOR FEATURES OF FINAL ROUTE

4.3.1 Transmission Lines

As already mentioned in the above sub-section 4.2.1, only stringing of 2nd circuit and renovation activities are undertaken in the existing three transmission lines in the instant subproject.

Stringing of 2nd circuit in the existing transmission lines of MSPCL which were constructed earlier as single circuit line on double circuit tower considering future provision of up-gradation of the line as double circuit includes stringing of electrical conductor in the existing towers within the already available RoW.

Renovation of existing transmission line involves activities like replacement of insulators, strengthening cross arm of tower, change of tower parts & change of conductor etc. only within the already available RoW without any civil construction work.

Since the route of transmission lines in the instant subproject were not planned as these routes are of existing transmission lines and only renovation and stringing of 2nd circuit operations were carried out. Since no new route has been created as existing route has been utilized therefore major features of these routes were not studied.

Joint survey reports and line material schedule of the T/Ls are given as **Annexure II**.

4.3.2 Distribution Lines

About 60% of the lines are passing through plains and 40% through hilly terrain i.e. out of the total 5 distribution lines, 3 are in plains and rest 2 are in hilly terrain. These lines pass through agricultural land, private plantation and

Govt. lands along existing roads and bunds and do not involve any reserve/protected forest land (refer Figure 4.3 to 4.7). It has been observed that there are some variations in final route length of lines from earlier routes so that environment & social sensitive areas are avoided/ minimized. However, considering that distribution line has minimum environmental footprints and increase in total line length by 14.134 km for all lines (from earlier 48.80 km to 62.934 km) without any change in land use and other base line data, no additional impacts of any kind apart from earlier identified impacts in IEAR/EMP are anticipated. A total of around 1161 poles are being/to be erected for all 5 proposed distribution lines having a total line length of 62.934 km.

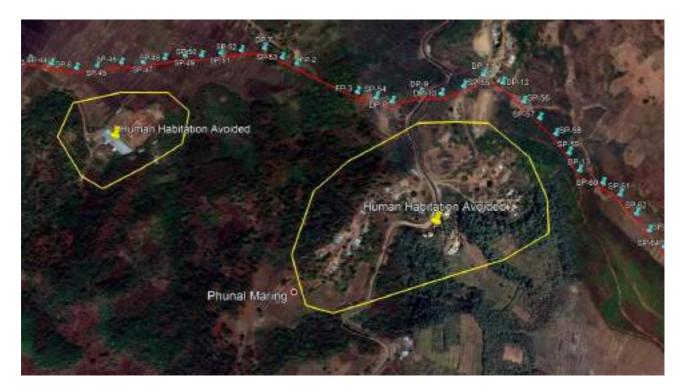

4.3.2.1 33 kV line from 33/11 kV Andro to 33/11 kV Langdum Substation

Total length of the line is 4.93 km, of which, 4.116 km of the line passes through plains comprising of agricultural land while a small portion i.e. 0.814 km passes through hilly terrain comprising of Govt. land (owned by Department of Revenue). The selected line does not pass through any National Highway, Railway crossings, settlement or any other critical environmental area. However, the line is crossing a 33 kV line between Double Pole (**DP**) 05 and DP-06; 11 kV line between DP-01 and Four Pole (**FP**) 01, between Single Pole (**SP**) 44 and DP-11 and between DP-24 and DP-25; Main road between DP-9 and DP-10 and between DP-17 and sub-station; village road; and LT line.

Since the route of the line has been changed from earlier envisaged Thoubal - Andro to Andro - Langdum, therefore the line length of final route (**Table 4.1**) has been decreased by 4.37 km i.e. from 9.3 km to 4.93 km. The line has total 133 poles. The types of poles used are 12 mtr. SP, DP and FP and 14.5 mtr. DP. As preventive measures, total 79 no. of stay sets, 23 no. of earthing sets, 32 no. of danger plates and 64 no. of anti climbing sets have been placed on the route. All the pole locations are easily accessible through existing road to carryout construction and maintenance activity and construction of new approach road is not required.

4.3.2.2 33 kV line from 33/11 kV Sanjenbam to 33/11 kV Porompat Substation

Total length of the line is 3.59 km, of which, 3.454 km of the line passes through plains comprising of agricultural land while a small portion i.e. 0.136 km passes through hilly terrain comprising of Govt. land (owned by

Department of Revenue). The selected line does not pass through any National Highway, Railway crossings, settlement or any other critical environmental area. However, the line is crossing 11 kV line between SP3 and SP4, between DP5 and DP6, between SP25 and FP1 and between SP39 and DP9; and roads.

Since the route of the line has been changed from earlier envisaged Porompat - Khumanlampak to Sanjenbam - Porompat, therefore the line length of final route (**Table 4.1**) has been decreased by 2.21 km i.e. from 5.80 km to 3.59 km. The line has total 94 poles. The types of poles used are 12 mtr. SP, DP and FP. As preventive measures, anti climbing sets have been placed on the route. All the pole locations are easily accessible through existing road to carryout construction and maintenance activity and construction of new approach road is not required.

4.3.2.3 33 kV line from 33/11 kV Sanjenbam to 33/11 kV Napetpalli Sub-station

The total line length i.e. 7.472 km passes through plains comprising of agricultural land. The selected line does not pass through any National Highway, Railway crossings, settlement or any other critical environmental area. However, the line is crossing road between DP6 and DP7; Lamlai road between DP20 and DP21; and LT line.

The line length of final route (**Table 4.1**) has been decreased by 1.53 km i.e. from 9.0 km to 7.472 km due to further optimization during ground truthing survey. The line has a total 209 poles. The types of poles used are 12 mtr. SP, DP and FP. As preventive measures, anti climbing sets have been placed on the route. All the pole locations are easily accessible through existing road to carryout construction and maintenance activity and construction of new approach road is not required.

4.3.2.4 33 kV line from 33/11 kV Khoupam to 33/11 kV Thangal Substation

Total length of the line is 46.60 km, of which, 3 km of the line passes through plains comprising of agricultural land while the rest i.e. 43.60 km passes through hilly terrain comprising of private plantation and Govt. land (owned by Department of Revenue). The selected line does not pass through any National Highway, Railway crossings, settlement or any other critical environmental area. However, the line is crossing 11 kV line between SP9 and SP10 and between FP12 and FP13; Leimatak river between DP96 and FP71; and Dollang to Thangal as well as Dollang to Khoupum road at several locations.

The line length of final route (**Table 4.1**) has been increased by 30.90 km i.e. from 15.70 km to 46.6 km. The line length has been increased after further optimization during ground truthing survey, so that line run along the existing road and avoid habitation areas, to avoid forest area, CPR are not impacted, it does not pass through any protected area and monument of archaeological importance, tree cutting has been avoided and also to make it technical feasible from operation maintenance point of view. Though there is a significant increase in line length, the resultant environmental footprints will not increase. The line has a total 1237 poles. The types of poles used are 12 mtr. tubular SP, DP and FP. As preventive measures, anti climbing sets have been placed on the route. All the pole locations are easily accessible through existing road to carryout construction and maintenance activity and construction of new approach road is not required.

4.3.2.5 33 kV line from LILO of existing 33/11 kV Churachandpur – Thankew line at Tuilaphai Sub-station

Total length of the line is 0.342 km only. The line passes through hilly terrain comprising of Govt. land (owned by Department of Revenue). The selected line does not pass through any Power line, Railway crossings, settlement or any other critical environmental area. However, the line is crossing National Highway 150 between FP1 and DP1, which do not require any special poles.

The line length of final route (**Table 4.1**) has been decreased by 8.658 km i.e. from 9.0 km to 0.342 km due to change in existing 33/11 kV line i.e. from Churachandpur – Singhat to Churachandpur - Thankew. The line has a total 22 poles. The types of poles used are 12 m tubular DP and FP. As preventive measures, anti climbing sets have been placed on the route. All the pole locations are easily accessible through existing road to carryout construction and maintenance activity and construction of new approach road is not required.

Chapter **5**

POTENTIAL ENVIRONMENTAL IMPACTS, EVALUATION AND ITS MANAGEMENT

5.1 INTRODUCTION

Environmental impacts of Transmission & Distribution (T & D) projects are not far reaching and are mostly localized to RoW (refer **Table 5.1**). However, T & D projects have some effects on natural and socio-culture resources. All possible measures have been taken during the finalization of route alignment as described in the earlier chapter for the proposed transmission/distribution system, however, due to the peculiarity of terrain where project is being implemented, some environmental impacts may be there. The explanations in brief with regard to possible environmental impact and measures taken to minimize the same are given in ensuing paragraph.

Table 5.1: RoW Width

Transmission Voltage	Max. RoW (m)
132 kV	27
33 kV	15

5.2 IMPACT DUE TO PROJECT LOCATION AND DESIGN

5.2.1 Resettlement

Land is required for

- a) erection of towers/pole for transmission and distribution lines and
- b) construction of substations.

As explained in previous chapter during line routing stage itself all measures have been undertaken by IA to avoid settlements such as cities, villages etc. in line with the guiding principle of avoidance as per ESPPF. During detail survey modern techniques/tools like GIS, GPS, and aerial photography were utilized to further optimization the final route alignment avoiding human habitation and other ecological and socially sensitive areas. Moreover, the project does not require any resettlement of villagers as no land is acquired for tower/pole foundation as per existing law.

The present subprojects involves construction of 4 new 33/11 kV sub-stations at Andro, Sanjenbam, Thangal and Tuilaphai for which fresh lands have been secured through private purchase on willing—buyer and willing-seller basis on negotiated/market rate. A total of 2.226 acre land has been secured for these sub-stations from 6 private persons who willing sold their land. Apart from

this, for the construction of 1 new 33/11 kV sub-station at Porompat, 1.97 acre of Govt. land has been provided by MSPCL. The augmentation/extension work at sub-stations are being undertaken in the already existing MSPCL substations premise and no acquisition of fresh land was required for this purpose. Since, no involuntary acquisition was involved and fresh lands were secured only through private purchase there is no R & R and resettlement issues.

5.2.2 Impact on Soil & Surface Geology

In plain areas impact on soil & geology is almost negligible as the excavated pit material is stacked properly and back filled as well as used for resurfacing the area. On hill slopes where soil is disturbed and prone to erosion is suitably protected by revetment, breast walls, and proper drainage.

5.2.3 Impact on Land for Tower Base & Pole

As per the assessment carried out in Compensation Plan for Temporary Damages (CPTD) by PGCIL, the land requirement for erection of tower legs in the instant subproject is nil as only stringing of 2nd circuit/renovation activities in existing 132 kV transmission lines have been undertaken. In case of 33 kV distribution line area that becomes unavailable because of the erection of pole is insignificant as approx. 1 sq. ft. land area is occupied for one pole (refer **Figure 5.1**). Due diligence confirms that land is either agricultural or barren, and current land use is not altered and resumed after construction.

The average land area will be unavailable for agriculture after erection of one one pole for 33 kV distribution line is approx. 0.092 sq m. Based on above, total land loss for construction 55.507 km of 33 kV distribution line proposed under the present scheme is estimated 0.053 acre. However, compensation toward loss land shall be provided to APs which is part of RoW compensation. Details of land loss for tower base & pole are given in **Table 5.2**.

Table 5.2: Estimation of Actual Loss of Land for Tower Base & Pole

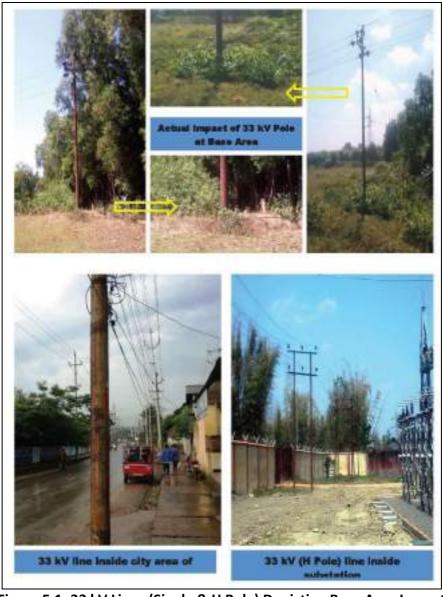

Figure 5.1: 33 kV Lines (Single & H Pole) Depicting Base Area Impact

5.2.4 Impact on Crop Area (RoW Corridor & Tower/Pole)

Construction of line in crop season is avoided as far as possible. In case when installation of towers/poles impacts on agricultural activity, detailed assessment/survey is conducted looking at existing crops, general crop patterns, seasonal particulars, nature and extent of yield. This data is compiled and analysed to study the extent and nature of impact.

For the temporary loss of crops, only agricultural land and private plantation land are considered for estimation. The damages are not done in complete RoW of line (27 m for 132 kV D/c) but mostly restricted to tip to tip of the conductor and tower base area where average affected width/corridor would be limited to 20 meter (maximum). In 33 kV distribution lines, damages are minimal (mostly near bi-pole/quad-pole structure) however, 10 m corridor is considered for accessing the damages. Moreover, all efforts are made to reduce the damages to crops and to minimize the impacts whatsoever. One of the reasons is that schedules of construction activities are undertaken in lean season or post-harvest periods. Assets of any sorts will not be acquired but during construction, only temporary damages will occur.

Based on the above estimation, the total land considered for crop damage for transmission/distribution line corridor and tower/pole foundation for the entire subproject is 896.93 acre. Details of estimated impacted area for crop damages are given in **Table 5.3**.

5.2.5 Impact on Trees

Construction of line in fruit bearing season is avoided as far as possible. Tree compensation is calculated on the basis of tree enumeration, tree species and an estimate of the compensation will be calculated on the basis of 8 years yield (assessed by revenue/horticulture department).

Total numbers of trees likely to be affected due to stringing of 2nd circuit/ renovation of 167.338 km of 132 kV line and construction of 55.507 km of 33 kV distribution line is approx. 786 nos., out of which 141 are trees in private area and 645 trees on govt. land i.e. land belonging to state revenue department. It is pertinent to mention here that no tree has been felled, only pollarding/ pruning of trees have been carried out during stringing operation. Details on number of trees for each line are given in **Table 5.4**.

5.2.6 Impact on Other Assets (Small Shed in Agriculture Fields)

It has been observed during survey that approximately 7 numbers of small structures exist along the right of way of proposed distribution lines. No such structures exist along the right of way of transmission lines. These are small storage sheds/huts which are mostly temporary structure associated with the agricultural fields. People do not use these small structures/sheds for residential purpose and they use it as storage of agricultural produce or resting place only. However, efforts have been made to avoid these structures completely through minor alterations of the route alignment. Wherever alteration of the route was not possible, the structures were restored to their original condition by the contractors once stringing operation is complete or are being paid compensation. Details on impacts on small structures are given in **Table 5.5**.

5.2.7 Affected Persons

Affected Persons (APs) are those who are affected due to the various civil works like impact on other assests, damage to trees due to pollarding/pruning or some partial damage to produces during stringing. Though the impact is temporary. The estimated number of affected persons are approximately 56. It is once again pertinent to mention here that persons got affected due to some temporary damages which lasted during construction phase only. The persons details are given in **Table 5.6**. The number of APs in the table refers to the most conservative option. State Utilities/ POWERGRID scheduled the civil works in such a way to minimize impacts and substantially reduce the damages to crops and therefore the number of affected persons and Agricultural Households (AHH).

Table 5.6: Details of Affected Persons

S. No.	Name of Line	Total Affected Persons
Α	Transmission Lines

	TOTAL	56

Source: Detailed Survey of POWERGRID/ Contractor

5.2.8 Other Damages

Other damages like bunds, water bodies, fish ponds, approach paths, drainage and irrigation canals etc. have been avoided. However, if damaged, the Revenue Department will assess the cost of damage as per State Govt. norms.

The total estimate will be submitted for approval to the competent authority. Payments will be made to owners in the presence of local revenue authorities or village head/ Sarpanch and respective acknowledgements will be obtained and POWERGRID/ MSPCL will pay the compensation. Hindrances to power, telecom carrier & communication lines etc. will be paid as per Govt. norms.

5.2.9 Land Value Depreciation

It is evident that electric power being an enabler sector acts as a catalyst for the growth and development of areas having accessibility to it. Based on past experience land prices are generally expected to rise in the areas receiving power. In the present project, transmission lines pass through agriculture fields, private plantation area and govt. land (mostly uninhabited and scrub land), where the land-use is not going to change in foreseeable future. Therefore, the value of land is not adversely affected to a significant degree. Moreover, distribution lines are primarily intended to provide power supply to populated area which boost the economic status as well as land price of the area, thus, outweighing possible negative impacts, if any.

5.2.10 Historical/Cultural Monuments/Value

Final routes of transmission and distribution line and sites for construction of new sub-stations don't involve any monuments of historical or cultural significance.

5.2.11 Encroachment into Precious Ecological Areas

In accordance with the policy of route selection, IA/Utility have taken all precautions right from the planning stage itself to avoid routing of line through forest, protected areas like national park, wildlife sanctuary, biosphere reserve/ biodiversity hotspot and other ecological sensitive areas. Moreover, the existing lines on which stringing and renovation are proposed also don't involve any forest area, therefore, provisions of the Forest (Conservation) Act, 1980 shall not prevail.

5.2.12 Encroachment into Other Valuable Lands

GoMan adopted the MoP guidelines dated 15th October 2015 for land compensation for tower footing and RoW Corridor on 28th March 2018 which provide payment of @ 85% and @ 15% of land value towards compensation for land coming under tower base and line corridor respectively. Further, as per said guidelines land compensation provisions is only applicable to new or ongoing transmission lines and shall not be applicable in case of existing line, stringing of 2nd circuit, reconductoring/re stringing, repairing, construction of existing towers etc. Since in instance project only stringing and renovation work is involved in proposed 132 kV lines provisions of said guidelines shall not be applicable.

In case of 33 kV distribution line, area that becomes unavailable because of the erection of pole is insignificant as approximately one sq. ft. land area is occupied for one pole. As already mentioned in Table 5.2, total land loss area for 1695 poles is only 0.038 acre, therefore, land value for pole base is not considered for land compensation.

Following cardinal principles of avoidance, minimization, MSPCL/ POWERGRID has selected and finalized the routes of transmission line with due consideration of the avoidance or minimization of impacts toward temporary damages on crops/ trees/ structures, if any coming in the Right of Way (RoW) during construction. Similarly, the route of all the 33 kV distribution lines are mostly selected /finalized along the existing roads (PWD roads/Village roads etc.) involving minimum habitated areas and also through agricultural and barren lands wherever possible.

During project implementation also, due to inherent flexibility in phasing construction activity in lean period or rescheduling the construction activity in cropped area for some period to facilitate crop harvesting, temporary impacts associated with Transmission Lines are further minimized to a great extent. However, if it is unavoidable and is likely to affect project schedule, compensation is given at market rate for standing crops in consultation with revenue department and affected person based on assessment of actual damages. In the instant project also all possible measures are taken to avoid damages to crop/trees through taking up the construction activities during lean period or post-harvest season. As per the prevailing norms farming activity is allowed after the construction work is completed. However, compensation for the loss of crops/trees/any structure paid to APs for the area of damage to mitigate the impacts probably 3 times i.e. during foundation work, tower erection & stringing as per the prevailing situation, which is stringing in this case. The details about the cost of compensation for crops and trees is given below in **Table 5.7**.

Table 5.7: Cost of Compensation for Crops and Trees

S. No.	Name of Line	Line Length (km)	Compensation/ Km (Rs. in lakh)	Total compensation cost for Crops & trees (Rs. in lakh)

	TOTAL	230.272		868.157

Source: CPTD Plan prepared by PGCIL

As already stated, no physical displacement is envisaged in the proposed project. Similarly, displacement of structures is normally not envisaged due to flexibility of routing of transmission/distribution line. However, whenever it is necessary, compensation for structures has been/ is being provided. In the instant case, 8 nos. of small structures/sheds likely to be encountered in the right of way of proposed distribution lines. These are small sheds/ small storage which are associated with the agricultural fields. People do not use these small structures/ sheds for residential purpose. The compensation has been/ is being paid to the APs as decided by committee based on state government norms.

In line with the compensation procedures laid down in ESPPF & CPTD, compensation towards damage to tree/crop and land diminution value have been/ are being paid to affected persons after assessment of actual damage based on market rate and verification by concerned revenue authorities. A sample case of compensation payment including notice to land owner, assessment and verification by revenue authority and payment to affected person etc. is enclosed as **Annexure III**.

5.2.13 Interference with other Utilities and Traffic

As per regulations, it is mandatory for IA/Utility to seek clearance prior to construction from department of Railways, Telecommunications and wherever necessary from aviation authorities that are likely to be affected by the construction of transmission lines. The transmission and distribution lines do not interfere with telecommunication towers. Further, railway lines and aviation routes are not present in the project locations. It is therefore not required to avail clearances from Department of Railways, Department of Telecommunications, and the Ministry of Aviation.

NH-39, NH-53 and NH-2 are the main roads, which connect the project sites through various state highways, district roads and village roads. Traffic on NH-39 is comparatively more than traffic on NH-53 and NH-2. As regard inference with traffic, it is to may be noted that execution of the projects covered in this report has not resulted in any steep rise in traffic volume. Further, the present project requires very less vehicular movement and that too restricted to construction period only. Hence, no steep rise in traffic volume is anticipated/observed.

5.2.14 Interference with Drainage Pattern

As the transmission lines are constructed aerially and the blockage of ground surface is limited to area of tower footings, which in the instant subproject is nil as only stringing of 2nd circuit and renovation work has been undertaken, therefore, there is almost no possibility of affecting drainage pattern. The distribution lines proposed under this scheme don't involve any pole to be placed in river bed which could interfere with existing drainage patterns. Another measure already suggested in EMP and in place is to avoid dumping of fill materials in sensitive drainage area. In case of substations, all drainage channels along or inside substations are being trained and connected to main or existing drainage to avoid any erosion due to uncontrolled flow of water.

5.2.15 Impact Due to Construction of New Substation, Bay Extension and Augmentation

The project component consists of establishment of five 33/11 kV sub-stations and bay extension of four 132/33 kV sub-stations i.e. at Kakching, Kongba, Jiribam and Ukhrul and bay extension/ augmentation of twelve 33/11 kV sub-stations. Fresh lands were secured through private purchased on negotiated rates based on "willing buyer-willing seller basis" for establishing four new 33/11 kV sub-station. Apart from this, for the construction of 1 new 33/11 kV sub-station at Porompat, Govt. land has been provided by MSPCL. For bay extensions/ augmentation land is already available with MSPCL within the existing sub-stations. Since involuntary acquisition is not involved, R&R will not be an issue in the instant project. The details are provided in **Table 5.8**.

Table 5.8: Details of Land Securing Method for New Sub-stations

S. No.	Name of Sub-station	Land Area (acre)	No. of Land Owner	Land Securing Method
Α	Distribution Scheme			
1	33 kV at Andro	0.50	1	willing buyer- willing seller basis
2	33 kV at Sanjenbam	0.62	3	willing buyer- willing seller basis
3	33 kV at Porompat	1.97	NA	Govt. land through transfer

S. No.	Name of Sub-station	Land Area (acre)	No. of Land Owner	Land Securing Method
4	33 kV at Thangal	0.612	1	willing buyer- willing seller basis
5	33 kV at Tuilaphai	0.494	1	willing buyer- willing seller basis

Source: Detailed Survey of POWERGRID/ Contractor

The other environmental impacts that impact environment due to construction/ bay extension of sub-station are uncontrolled silt runoff, nuisance to nearby area, inadequate resurfacing for erosion control, inadequate disposition of borrow area, workers health/ safety. All these impacts and their management are discussed in detail in Chapter 5.4.1.

Another impact is construction of access road. Access to all the new/ existing sub-stations will be along existing roads or village paths; minor improvements to paths may be made where necessary, but no major construction of roads, except, 33/11 kV sub-stations at Tuilaphai and Sanjenbam where approach road of 95 m and 22.5 m respectively have been constructed will be carried out.

The approach road at Sanjenbam has been constructed on already acquired land for the construction of sub-station. The approach road of 95 m at Tuilaphai is from National Highway 2 to sub-station. It was an existing foot path only on community land, being used by villagers for movement from their home to National Highway or other movements. Since the approach road is a permanent upgradation of footpath to road, therefore, villagers gave their consent for this expansion. In many areas such improvement in the access road is highly appreciated by the local population. Since none of these segments require any additional land and thus have insignificant environmental and social impacts, these would fall in low risk category as per E & S screening criteria.

However, Construction of road may lead to soil erosion, increase the airborne dust particles, nuisance to nearby area, require land for temporary accessibility etc. Impacts due to road construction and its management are discussed in detail in Chapter 5.4.1.

5.2.16 Impact on Indigenous People

Government of India, under Article 342 of the Constitution, considers the following characteristics to define indigenous peoples [Scheduled Tribes (ST)]:

- i. tribes' primitive traits;
- ii. distinctive culture;
- iii. shyness with the public at large;

- iv. geographical isolation; and
- v. social and economic backwardness before notifying them as a Scheduled Tribe.

Essentially, indigenous people have a social and cultural identity distinct from the 'mainstream' society that makes them vulnerable to being overlooked or marginalized in the development processes. STs, who have no modern means of subsistence, with distinctive culture and are characterized by socioeconomic backwardness, could be identified as Indigenous Peoples. Indigenous people are also characterized by cultural continuity. Constitution of India identifies schedule areas which are predominately inhabited by such people.

Further, under Article 371 C of Constitution of India provides special provision to the State of Manipur for the Constitution and functions of a committee of the Legislative Assembly of the State consisting of members of that Assembly elected from the Hill Areas of the State. Under this Manipur (Hill Areas) District Council Act was enacted in 1971 which has provisions similar to those contained in the Sixth Schedule and has established six Autonomous Hill District Councils, covering 5 hill districts of the State. These Autonomous Hill District Councils (AHDC) are empowered to maintain and manage the property: movable and immovable, and institutions under their jurisdiction (e.g. in the field of agriculture, animal husbandry, community development, social and tribal welfare, village planning, management of any forest except RF, regulation of the Jhum /shifting cultivation or any other matter.) Under this act, the administrations of the Tribal areas is vested in village/district council under supervision of concerned DC at local/district level and Hill area Committee at State level. All activities sited in AHDC area needs their consent.

Since, the project under NERPSIP is envisaged for economic uplifting of the NE region, hence, no indigenous population will be negatively impacted in the project area. However, in accordance with the provisions of Social Management Framework (SMF, A-C) placed in the Environment and Social Policy and Procedures (ESPPF) of MSPCL all social issues shall be dealt separately. The SMF has been given as **Annexure IV**.

5.2.17 Environmental & Social Impact Matrix Due to Route Alignment

Based on the above analysis of final route of transmission and distribution lines and location of EHV and DMS sub-stations, the summarized environmental & social impact matrix is presented below in **Table 5.9**.

Table 5.9: Summary of Impacts

S. No.	PARAMETERS	EXTENT OF IMPACT	
1. A.	Total Line length -	Only stringing of 2 nd circuit and renovation works have been	

S. No.	p. PARAMETERS EXTENT OF IMPACT		
J. 14U.	(TL -167.338 km,	undertaken in the TLs therefore, apart from impacts during civil	
	DL- 62.934 km)	works which are temporary in nature no environmental impacts	
	DE 02.334 KIII)	have been envisaged. Though final route length of DL has increased	
		by approx. 14.134 km, still no additional impacts of any kind apart	
		from earlier identified impacts in IEAR/ EMP are anticipated as	
		there is no change in land use and other base line data. Moreover,	
		changes in the final route length have been made so as to avoid/	
		minimize environment & social sensitive areas.	
		Tillillillize elivirollillelit & social selisitive aleas.	
		As compared to IEAR, no additional impacts are anticipated.	
B.	Terrain: Plain area	As already stated, only stringing of 2 nd circuit and renovation works	
	– 18.042 km (DL);	have been undertaken in the TLs therefore, terrain condition will	
	Hilly area – 44.892	not be impacted. 2 out of 5 distribution lines are passing through	
	(DL)	hilly area. Similarly, 2 out of 5 new sub-stations constructed are in	
		hilly areas. However, no adverse impact on the terrain has been	
		observed due to the construction of sub-stations as well as due to	
		the distribution lines.	
2.	Forest land	No notified forest. Only private plantation and govt. land of approx.	
	traversed (km)	105.715 km of total line length having vegetation encountered. It is	
		estimated that maximum 786 trees will be felled. Further, in hilly	
		area due to additional height gain of towers and availability of	
		adequate clearance tree felling will be further minimized.	
3.	Forest type	NA	
4.	Forest density	NA	
5.	Rare/endangered	No rare/endangered flora found in project area.	
	flora		
6.	Rare/	No rare/endangered flora found in project area.	
	endangered		
_	fauna	ALA	
7.	Migrating	NA	
	Wildlife/ breeding		
8.	ground National Park /	No protected areas involved	
0.	sanctuaries	No protected areas involved	
9.	Wet land	None	
9.	traversed	None	
10.	Soil erodibility	Low	
11.	Historical /	None	
	Cultural		
	monuments		
12.	Total Affected	As per assessment carried out under CPTD, total APs are 56, of	
	Persons (APs)	which 21 are due to TLs and 35 are due to DLs. All APs will be	
	·- (· ·· -)	compensated as per the Govt. norms.	
13.	Relocation of	None	
	villagers		
14.	Area of actual land	Total 0.038 acre of actual loss of land will be taking place under pole	
	loss under Tower	base. This loss is temporary in nature i.e. during construction time	
	Base	only. APs are being compensated for actual land loss.	
15.	Affected	7 small sheds being used for agricultural purpose were affected due	
	Structures	to DLs. APs are being compensated for affected structures.	
16.	Temporary	Total 896.93 acre of area has come under temporary damage to	
	Damage to Crop	crop. This loss is temporary in nature i.e. during construction time	

S. No.	PARAMETERS	EXTENT OF IMPACT		
		only. APs are being compensated for actual land loss.		
17.	Loss/ Hindrance to	Negligible, restricted to construction phase only.		
	Public Utilities			

5.3 ENVIRONMENTAL PROBLEMS DUE TO DESIGN

5.3.1 Escape of Polluting Materials

The equipment installed on lines and substations are static in nature and do not generate any fumes or waste materials. However, detailed specification with respect to equipment design and substation drainage and sewage design has been included in tender document to avoid any incidence of land and water contamination. Transformers have been designed with oil spill containment systems having sump of capacity of 200% of oil volume of largest transformer, and purpose-built oil, lubricant and fuel storage system, complete with spill cleanup equipment. Substations include drainage and sewage disposal systems to avoid offsite land and water pollution. Apart from this, solid waste like packing materials, cables, aluminum conductor, sand, aggregate material, cements and steel generated during construction is carefully handled and removed from the sites periodically to avoid any contamination.

Drainage and Sewage system within the 33/11 kV Thangal Substation

Drainage within the 33/11 kV Tuilaphai and Sanjenbam Substations

5.3.2 Explosion/Fire Hazards

During the survey and site selection for transmission lines, and substations, it has been ensured that these are kept away from oil/gas pipelines and other sites with potential for creating explosions or fires. Fires due to flashover from lines can be a more serious problem in forest. However, adequate safety measures are taken to avoid such incidence. In the present project, the route line routes and substations are not located close to the vicinity of oil/gas pipelines or other installations with potential fire/ explosion hazard. Apart from this, automatic tripping mechanism for transmission/distribution and substations are being installed so that line gets disconnected in fraction of seconds to prevent fire hazards. Also, fire wall between transformers are being constructed to prevent fire from spreading. Firefighting instruments including fire extinguishers are kept in appropriate place for immediate action in case of any fire hazard.

5.3.3 Erosion Hazards due to Inadequate Provision for Resurfacing of Exposed Area

Construction of 132kV line involves only small-scale excavation of area i.e. 3m L x 3m W x 3m H for tower footing that may result in generation of 108 m³ of excavated material from each tower. In case of 132/33 kV substation foundation, excavation of soil to the tune of 7500 m³ is required depending on site condition. Similarly, in case of 33 kV line, soil excavation is limited to 0.72 m³ for each pole, and for 33/11 kV sub-station, excavation of around 2000 m³ is required. Since, no new 132/33 KV sub-stations are proposed and no new transmission towers are be erected under the present scheme. It has been worked out that a total of approximately 11,220 m³ (1695x0.72 + 5x2000) of excavated materials gets generated for construction of 1695 nos. of poles and 5 nos. of 33/11 KV substations proposed under present scheme. However, all the soil excavated for pole footings and substations construction are optimally (about 80-90%) utilized for backfilling and the remaining soil being spread evenly and compacted. Top soil disturbed during the development of sites are used to restore the surface of the platform. Infertile and rocky material are used as fill for substation/ and tower/pole foundations. Hence, possibility of erosion of exposed area due to construction activity is negligible.

5.3.4 Environmental Aesthetics

Since spacing between the towers/poles in case of 132 kV transmission & 33 kV distribution lines is approximately 300 meters and 100 meters, respectively, these don't affect the visual aesthetics of the localities particularly when it is ensured to route the lines as far away from the localities as possible. MSPCL takes up plantation of trees to buffer the visual

effect around its substations and to provide better living conditions. Wherever MSPCL feels it appropriate, discussions are held with local Forest Department officials to determine feasibility of planting trees along roads running parallel to transmission lines to buffer visual effect in these areas. In addition, towers are painted grey or green to merge with the background.

5.3.5 Noise/Vibration Nuisances

The equipment installed at substation are mostly static and are so designed that the noise level always remains within permissible limits i.e. 85 dB as per Indian standards. Transformers with maximum noise emitting level of 75 dB and DG set with proper enclosures are part of equipment specification/ design criteria. Some noise is unavoidable during construction phase like noise produced by concrete mixing equipment and excavators which are temporary and only in day time. However, regular monitoring by IA/Contractors and due maintenance of equipment are ensured to keep the noise level well within the prescribed limit. Further, to contain the noise level within the permissible limits whenever noise level increases beyond permissible limits, measures like providing sound and vibration dampers and rectification of equipment are undertaken. In addition, plantations of sound absorbing species like Casuarinas, Tamarind, and Neem are raised at all the substations that reduce the sound level appreciably.

5.3.6 Blockage of Wildlife Passage/Impact on Avifauna

The proposed transmission & distribution lines are not passing through any forest area, wildlife area. Since there is no protected area or demarcated/documented migration path of wildlife like elephant corridor existing near to subproject locations, hence, possibility of any disturbance to wildlife is not imminent.

Avian hazards are mostly encountered in bird sanctuaries area, IBAs and fly path of migratory bird predominantly related to nesting site. Since in the instant case due to routing of line away from such areas, bird hit/electrocution is not anticipated. Although the incidence of avian hazards is rare due to the distance between the conductors, however, as an additional measure to prevent any avian hazards, bird guards/ anti perch devices are integral part of tower design (drawing attached as **Annexure V**).

5.4 ENVIRONMENTAL PROBLEMS DURING CONSTRUCTION PHASE

5.4.1 Uncontrolled Silt Runoff

As already stated, only stringing of 2nd circuit and renovation work has been undertaken in the existing transmission lines, therefore, there was no impact

due to the silt runoff. In case of distribution lines all the excavated soil is backfilled and compacted immediately after erection of tubular poles.

In case of sub-station, existing one are located on flat land and adjacent to existing road and new ones are also being constructed on flat land after site clearing and leveling. It is also being ensured that new sub-stations are close to existing road and construction of approach road is avoided as far as possible, however, in case of 33/11 kV sub-stations at Sanjenbam and Tuilaphai approach road of 22.5 m and 95 m respectively has been constructed.

Approach road at 33/11 kV Sanjenbam and Tuilaphai Substations

As already explained, during construction limited quantity of excavated material is generated from tower/pole foundations and sub-station foundation. However, adequate measures have been taken to store excavated materials properly for refilling after construction is over. Further, excavation is avoided in rainy days. Hence, uncontrolled silt run off is not anticipated. However, during construction, precautions have been taken by contractors to avoid any such runoff of excavated material from the construction sites. Moreover, sub-stations are being constructed above the high flood level (HFL) by raising the foundation pad, therefore, are not prone to flooding/ erosive losses of soil.

Levelled surface at 33/11 kV Andro and Sanjenbam Substations

Levelled surface at 33/11 kV Thangal and Tuilaphai Substations

So far there are no instances with potential of erosion during construction of above said lines. Similarly, there are no instances of erosion/losses of soils into adjoining area as all the overburden are being backfilled within the substation boundary walls and properly managed. The substations are not located in the vicinity of water bodies or ecologically sensitive areas.

5.4.2 Nuisance to Nearby Properties

During site selection due care is taken to keep the transmission & distribution lines and substations away from settlements. Further, all the construction activities are undertaken through the use of small mechanical devices e.g. tractors and manual labour, therefore, nuisance to the nearby properties if any, is not expected. The construction activities are normally undertaken in lean period and post harvesting to avoid/minimize such impact. All construction sites of new sub-station are prohibited for general public both due to its separation/demarcation by boundary wall and also due to statutory provisions. Hence, any adverse impact arising during the construction of substation is temporary i.e. will last during construction phase only, and limited to the boundaries of proposed substation only and neither impacts nearby habitat/property nor health & safety of neighboring community.

Boundary Wall and Gate at 33/11 kV Tuilaphai Substation

Boundary Wall and Gate at 33/11 kV Andro Substation

Boundary Wall at 33/11 kV Porompat Substation

Boundary Wall and Gate at 33/11 kV Sanjenbam Substation

Boundary Wall and Gate at 33/11 kV Thangal Substation

5.4.3 Interference with Utilities and Traffic and Blockage of Access Way

Since all the locations of subprojects are not well connected through rail link, transportation of construction materials was mostly through road network. Access to the site was along existing roads or village paths; minor construction of roads i.e. at Sanjenbam and Tuilaphai have been carried out.

The approach road at Sanjenbam has been constructed on already acquired land for the construction of sub-station. The approach road of 95 m at Tuilaphai is proposed from National Highway 2 to sub-station. Presently, it is an existing foot path only on community land, being used by villagers for movement from their home to National Highway or other movements. Since the approach road is a permanent upgradation of footpath to road, therefore, villagers have given their consent for this expansion. In many areas such improvement in the access road is highly appreciated by the local population. Since none of these segments require any additional land and thus have insignificant environmental and social impacts, these would fall in low risk category as per E & S screening criteria.

The transmission and distribution lines do interfere with not telecommunication towers. Further, railway lines and aviation routes are not present in the project locations. Therefore, interfere with utilities and block the access way in this regard is also not at all expected. As and when a transmission line crosses any road, the short span angle (DT) towers are located at a distance so as not to cause any hindrance to the movement of traffic. Stringing at the construction stage is carried out during lean traffic period in consultation with the concerned authorities and angle towers are planted to facilitate execution of work in different stages.

5.4.4 Inadequate Resurfacing for Erosion Control

As already stated, only stringing of 2nd circuit and renovation work has been undertaken in the existing transmission lines, therefore, there were no instances of soil erosion due to tower errection. In case of distribution lines all the excavated soil is backfilled and compacted immediately after erection of tubular poles, while for pole on flat terrain, problem of soil erosion is not envisaged. Further, construction is generally undertaken in dry/non-monsoon period.

Similarly, existing sub-stations are located on flat land but new sub-stations are being constructed on flat land after site clearing and leveling. Further, due to undulating terrain and for slope protection, retaining / RRM walls have

been planned/ being implemented as erosion protection measure in the substations mentioned in **Table 5.2**.

Table 5.10: Details of Slope Protection Measures

S. No.	Location	Measure Type	Purpose of Measure	Present Status	
1	Establishment of 33/11 kV Sub-	RRM Wall	To avoid soil	Completed	
1	station at Andro (New)	NNIVI VVAII	erosion	Completed	
2	Establishment of 33/11 kV Sub-	Retaining	To avoid soil	Completed	
	station at Sanjenbam (New)	Wall	erosion	Completed	
3	In all sub-stations	Stone Pitching	To retain the soil	Provided	

RRM Wall at 33/11 kV Andro S/S

Retaining Wall at 33/11 kV Sanjenbam S/S

Stone Pitching at 33/11 kV Sanjenbam S/S

Stone Pitching at 33/11 kV Andro S/S

Stone Pitching at 33/11 kV Tuilaphai S/S

Stone Pitching at 33/11 kV Thangal S/S

For pole and sub-station located on flat terrain, problem of soil erosion is not envisaged. Few such instances have been demonstrated with the help of following photographs.

Poles from Andro to Langdum Substations

Poles from Sanjenbam to Porompat Substations

Poles from Sanjenbam to Napetpalli Substations

5.4.5 Inadequate Disposition of Borrow Area

As mentioned earlier the tower/pole foundations involve excavations on small scale basis and the excavated soil is utilized for back filling. In case of substations, generally the sites are selected in such a manner that the volume of cutting is equal to volume of filling avoiding borrowing of the area. In the

instant project also, the excavated material is disposed off in the same substation premises only. However, for 33/11 kV substations at Andro & Sanjenbam where excess soil was required, the same was borrowed from private land with due consent from land owner.

Borrow Site for Andro Substation

5.4.6 Protection of Worker's Health/Safety

All health & safety issues and their management aspects are integral part of project/contract specific safety plan (Annexure VI), which is also part of contract conditions. Various aspects such as, work and safety regulations, workmen's compensation, insurance are adequately covered under the General Conditions of Contract (GCC), a part of bidding documents. Project is being executed as per the approved plan and is regularly monitored by dedicated Safety personnel. Moreover, for strict compliance of safety standard/plan a special provision as a deterrent has been added in the contract which provides for a heavy penalty of Rs.10 lakhs for each accidental death and Rs 1.0 lakh for each injury and is deducted from the contractor's payment and paid to the deceased/affected family (Annexure VII).

Additionally, work and safety regulations, workmen's compensation, insurance are adequately covered under the General Conditions of Contract (GCC), a part of bidding documents. The project authority ensures that all contractors are operating with valid labor license as per provision under section – 12(1) of the Contract Labour (Regulation & Abolition) Act, 1970 and also certified under Section- 7(3) of the Building and Other Construction Workers (Regulation of Employment and Condition of Service) Act, 1996 from Ministry of Labour & Employment. Besides, the contractors have obtained requisite insurance policy as per provisions of Employee Compensation Act, 1923 for its employed workforce. Sample copy of labor license and insurance policy for workers is attached as **Annexure VIII**.

Efforts are being made to hire labourers locally to the extent possible, else same have been outsourced. The workers have been provided with PPEs such as boots and helmets. Mock drills such as fire safety, first aid etc. are conducted periodically to enhance the preparedness level of the workforce. Safety induction & awareness programme including HIV/AID are also conducted at every active site. Safety film for transmission project in local language is shown to workers for better awareness. Proper drinking water has also been provided. First aid boxes and provisions for treatment in case of emergencies were arranged locally/ nearby towns.

Since the work is either completed or at halt at all the sites in the project district, therefore, compliance for protection of worker's health/ safety could not be carried out. However, the site incharges have ensured full compliance of worker's health/ safety during construction time. No instance of any sort of mis happening with worker's health/ safety also justifies compliance of worker's health/ safety.

Health and Safety Training during Construction

5.5 ENVIRONMENTAL PROBLEMS RESULTING FROM OPERATION

5.5.1 O&M Staff/Skills Less Than Acceptable Resulting in Variety of Adverse Effects

The O& M program is normally implemented by substation personnel for both the lines as well as substations. Monitoring measures employed include patrolling and thermo-vision scanning. The supervisors and managers entrusted with O&M responsibilities are intensively trained for necessary skills and expertise for handling these aspects. A monthly preventive maintenance program is carried out to disclose problems related to cooling oil, gaskets, circuit breakers, vibration measurements, contact resistance, condensers, air handling units, electrical panels and compressors. Any sign of soil erosion is

also reported and rectified. Monthly monitoring reports are generated and appraised to Management, including a report of corrective action taken and a schedule for future action.

MSPCL follows the best international practices while designing its system to maintain acceptable prescribed Electro Magnetic Field (EMF) level. The ICNIRP guideline for acceptable EMF level for the general public (up to 24 hours a day) is a maximum exposure level of 1,000 mG or $100\mu T$. Further, because of health and safety issues such as fire safety, safe voltages on metallic parts of buildings, and safety clearances to avoid flashover, the transmission lines do not pass directly over any residential properties and as such the potential for EMF effects to occur is further diminished.

Poly Chlorinated Biphenyls (PCBs) due to their high heat capacity, low flammability and low electrical conductivity were extensively used as insulating material in capacitors and transformers. But after the finding that these PCBs are non-biodegradable and have carcinogenic tendency, their use in electrical equipment as insulating medium has been banned all over the world long back. However, it has been reported in some studies that chances of contamination of oil with PCB is possible. Keeping that in mind, MSPCL has discontinued procurement of electrical equipment containing PCB more than 2 mg/kg and specification (as per IEC 61619 or ASTM D4059) is being stated in the tender document. Moreover, the subject scheme doesn't involve replacement of any PCB containing equipment, hence no disposal of such equipment is anticipated.

5.6 CRITICAL ENVIRONMENTAL REVIEW CRITERIA

5.6.1 Loss of Irreplaceable Resources

In the instant project none of the project elements encroach upon any forest area, protected areas, and ecologically sensitive areas hence, the problem of losing natural resources is not anticipated.

5.6.2 Accelerated Use of Resources for Short-term Gains

The subprojects are not making use of any natural resources occurring in the area during construction and are not utilizing the same during maintenance phases. The construction material such as tower members, cement etc. are being sourced from factories while the excavated soil is being reused for backfilling to restore the surface. During construction of transmission line, very small quantity of water is required which is met from nearby existing source or through tankers. However, for substation water requirement is met mostly by ground water derived by digging a borewell during construction as

well as for operational stage. Moreover, provision of rain water harvesting in all proposed substations under the present scheme has been made to conserve precious water resources and enhance the ground water level. The aggregates used for construction are already available within sub-station area due to cutting, thus no new borrow area will be created. Hence, it may be seen that the activities associated with implementation of subject project shall not cause any accelerated use of resources for short term gain.

5.6.3 Endangering of Species

As described earlier, no endangered species of flora and fauna exist in the subprojects area is getting affected and considering aerial nature of transmission and distribution project, there is no possibility of endangering/causing extinction of any species.

5.6.4 Promoting Undesirable Rural-to Urban Migration

The subprojects will not cause loss of land holdings that normally trigger migration. It also does not involve resettlement due to acquisition of any private land holdings. Hence, there is no possibility of any migration.

5.7 PUBLIC CONSULTATION

Public consultation/ information dissemination is a continuous process starting with the project conception and continues during project implementation and even during O&M stage. Public is informed about the project at every stage of execution. During survey, MSPCL & POWERGRID site officials met people and informed them about the routing of transmission and distribution lines. During the construction, every individual, on whose land tower is erected and people affected by RoW, were consulted. Apart from this, Public consultation using different technique like Public Meeting, Small Group Meeting, informal Meeting have been carried out during different activities of project cycle. During such consultation, the public is informed about the project in general and in particular about the following:

- Complete project plan (i.e. its route and terminating point and substations, if any, in between);
- Design standards in relation to approved international standards;
- Health impacts in relation to EMF;
- Measures taken to avoid public utilities such as school, hospitals, etc.;
- Other impacts associated with transmission & distribution lines and MSPCL approach to minimizing and solving them;
- Trees and crop compensation process.

In the instant project also, many group meetings were organized (informally and formally) by IA & MSPCL in all villages where the interventions are happening. These meetings were attended by Village Panchayat members, senior/respected person of village, interested villagers/general public and representatives from MSPCL & IA. To ensure maximum participation, prior intimation in local language was given and such notices were also displayed at prominent places/panchayat office etc. During consultations/interaction processes with people of the localized areas, MSPCL field staffs explained benefit of the project, impacts of transmission line, payment of compensation for damaged of crops, trees, huts etc. as per The Indian Electricity Act, 2003 and The Indian Telegraph Act, 1885 and measures to avoid public utilities such as schools, hospital etc. People more or less welcomed the construction of the proposed project. Various issues inter alia raised by the people during public consultation and informal group meetings are as follows;

- To involve village headman during survey work/finalization of line corridor;
- To engage local people in various works associated with construction of line and if required proper training may be provided to engage them.
- To provide flexibility in disbursement of compensation;
- Direct payment of compensation to affected land owners and expeditious disbursement of compensation.

Also, during site visits, consultations were conducted with various stake holders belonging to community and affected people. Target group included contractor, contractor's labor, IA & MSPCL Staff and villagers. These consultations were carried out to capture the views of stakeholders about the project plan, design and layout of the project, environmental and social impacts, compensation process, benefits or drawback of the project etc.

It needs to be emphasized that public consultation was kept restricted due to the apprehensions of IA and contractors for security and other law & order related issues which were communicated and advised to field team at onset of field surveys itself and hence limited stakeholder consultations have been carried out. However, it was ensured that consultations representatively covered most stakeholders involved.

Major findings of the consultations are summarized below:

- People are well aware about the project, its various components and confirmed that IA & MSPCL informs about the project at every stage of execution.
- Considering that the state of electricity supply in the state is very weak, people welcomed the project as it will not only improve overall power

- supply situation but will also improve reliability, quality, security and enhancement of power supply of the state.
- People confirmed that IA & MSPCL are taking every step possible to avoid/ minimize the environmental and social impacts along the route of transmission lines and at site of sub stations.
- People confirmed that community reserves, sacred groves and community conserved areas are completely avoided while finalizing the route of lines.
- People also confirmed that their common property resources such as cemetery, school, community hall, habitation areas etc. have been completely avoided while finalizing the route of lines.
- People informed that staff of IA/ contractor are easily approachable and are very open to address their grievances. As a result, no written grievance has been received till date.
- People are very much happy with the rate of compensation being given to them and they are being involved in the process of deciding the rate of compensation.
- People confirmed that there is no disturbance of any sort to their life/ livelihood due to the construction or various other activities being carried out under the project.
- No cases of conflict between migrant and local population has been reported till date.
- Execution of project work provides opportunities to local contractors to get involved in construction, fabrication, transportation etc. activities.
- Most of the sub-contracts are awarded/ being awarded to local peoples.
- Contractor prefer and engage local peoples for skilled and unskilled works
- Local villagers rented out their buildings to contractor and IA for temporary offices and staff quarters in local that helps in income generation
- Wherever possible contractor and IA purchase daily need requirements for local vendors and shopkeepers that helps in economic upliftment of the area
- The contractor labor informed that they have been provided with PPEs such as boots and helmets.
- Mock drills such as fire safety, first aid etc. are conducted periodically to enhance the preparedness level. Safety induction & awareness programme including HIV/AID are also conducted. Safety film for transmission project in local language is shown for better awareness.
- First aid boxes and provisions for treatment in case of emergencies are arranged locally/ nearby towns.

 It was revealed that contractor and IA work with close coordination with village heads and community to avoid any misunderstanding during work

Details of public consultation meetings carried out during site visit and public consultation using different technique like Public Meeting, Small Group Meeting, informal Meeting undertaken by IA & MSPCL including minutes of meeting, list of participants and photographs are enclosed as **Annexure IX**.

5.8 COMPLIANCE OF EMP

The IA has a continuous monitoring mechanism of the project w.r.t. compliance of the mandatory requirements as stipulated in the IEAR. As many provisions of EMP related to construction contractor, EMP has been made integral part of contract document for its proper implementation by contractor/sub-contractor. Thus, the adherence to the clauses by the contractor is regularly monitored especially in respect of various implementation E & S measures including health and safety aspects. As part of the present study, mitigation measures as stipulated in the IEAR have been critically assessed/evaluated for compliance through physical inspection, verification of record/ documents/ drawing, interaction with project officials/contractor/ villagers/construction workers and PRA etc. Based on above, a detailed compliance status w.r.t. each identified impacts enlisted in EMP have been prepared and is presented in **Table 5.11**.

Table 5.11: Environment Monitoring Plan

<u>ن</u> §	Project activity/ stage	Potential impact	Proposed mitigation measures	Compliance Status
Pre	Pre-Construction			
1	Location of overhead line towers/ poles/ underground distribution lines and alignment & design	Exposure to safety related risks	Setback of dwellings to overhead line route designed in accordance with permitted level of power frequency and the regulation of supervision at sites.	Complied with. Route alignment criterion is part of survey contract wherein all statutory Electrical clearances as stipulated under CEA's regulations, 2010 (Measures related to safety & electric supply) are considered/ensured.
	Equipment charifications	Release of chemicals and	PCBs not used in substation transformers or other project facilities or equipment.	Complied with. Part of technical specification of transformer. PCB is not used or nondetectable level (i.e. less than 2mg/kg) as per IEC 61619 or ASTM D4059
2	design parameters	gases in receptors (air, water, land)	Processes, equipment and systems not to use chlorofluorocarbons (CFCs), including halon, and their use, if any, in existing processes and systems should be phased out and to be disposed of in a manner consistent with the requirements of the Government	Complied with. CFC free equipments are being procured.
3	Transmission/ Distribution line design	Exposure to electromagnetic interference	Line design to comply with the limits of electromagnetic interference from overhead power lines	Complied with. MSPCL follows the best international practices while designing its system to maintain acceptable prescribed Electro Magnetic Field (EMF) level. Designed as per guidelines of ICNIRP and ACGIH and checked by CPRI & M/s PTI, USA
4	Substation location and design	Exposure to noise	Design of plant enclosures to comply with noise regulations.	Complied with. Transformers with maximum noise emitting level of 75 dB specified in tender specifications. Sound proof enclosures used for D.G sets

<u>5</u>	Project activity/ stage	Potential impact	Proposed mitigation measures	Compliance Status
		Social inequities	Careful selection of site to avoid encroachment of socially, culturally and archaeological sensitive areas (i. g. sacred groves, graveyard, religious worship place, monuments etc.)	Complied with. No encroachment of any socially sensitive areas due to proposed substations.
		Impact on water bodies	Avoidance of such water bodies to the extent possible. Avoidance of placement of tower inside water bodies to the extent of possible	Complied with. Part of detailed alignment survey and design. No tower/pole located in water bodies.
			Careful route selection to avoid existing settlements and sensitive locations	Complied with. Part of detailed tower/pole alignment survey design. All socially sensitive areas including habitated areas avoided for TLs. However, DLs due to their functional mandate are bound to pass through habited areas.
2	Location of overhead line towers/poles/ laying of underground distribution line & alignment and design	Social inequities	Minimise impact on agricultural land	Complied with. Though major section of proposed lines are routed through agricultural land in order to avoid impact on environmentally/ socially sensitive areas, efforts such as scheduling of construction lean/ post-harvest period, consultation with local authorities/ autonomous councils etc. are being made to minimize impacts on agricultural land/produce to the extent possible
			Careful selection of site and route alignment to avoid encroachment of socially, culturally and archaeological sensitive areas (i. e. sacred groves, graveyard, religious worship place, monuments etc.)	Complied with. All settlements & ecologically sensitive areas avoided.
9	Involuntary acquisition or	Social inequities	Compensation and R&R measures as per	Since no involuntary acquisition of land is

§	Project activity/ stage	Potential impact	Proposed mitigation measures	Compliance Status
	permanent land acquisition for substation.		provision of RFCTLARRA, 2013	involved, there is no R&R issue.
7	Line through protected area/ precious ecological area	Loss of precious ecological values/ damage to precious species	Avoid siting into such areas by careful site and alignment selection (National Parks, Wildlife Sanctuary, Biosphere Reserves/ Biodiversity Hotspots) Minimize the need by using RoW wherever possible	Complied with. Part of detailed siting and alignment survey/design. All such areas are avoided
∞	Line through identified Elephant corridor / Migratory bird	Damage to the Wildlife/ Birds and also to line	Study of earmarked elephant corridors to avoid such corridors, Adequate ground clearance, Fault clearing by Circuit Breaker, Barbed wire wrapping on towers, reduced spans etc., if applicable Avoidance of established/identified migration path (Birds & Bats). Provision of flight diverter/reflectors, Bird guard, elevated perches, insulating jumper loops, obstructive perch deterrents, raptor hoods etc., if applicable	Not Applicable as there are no wildlife corridors Complied with. All such identified/ established birds migratory path have been avoided.
Q	Line through forestland	Deforestation and loss of biodiversity, edge effect	Avoid siting of line by careful site and alignment selection Minimise the need by using existing towers, tall towers and RoW, wherever possible Measures to avoid invasion of alien species Obtain statutory clearances from the Government Consultation with autonomous councils wherever required	Complied with. Proposed line routes of TL/DL have been finalised by taking consideration of minimum impact on forest area after consultation with forest authorities and/or village councils in case of private /community forest. Complied with. Existing towers have been used for stringing of 2nd circuit and renovation of existing TLs. Invasion of alien species not anticipated Not applicable as there is no involvement of forest land Complied with.

Con	Construction			
16	Equipment layout and installation	Noise and vibrations	Construction techniques and machinery selection seeking to minimize ground disturbance.	Complied with (Refer Section 5.3.5). Noise produced by concrete mixing equipment and excavators are temporary and confined to day time only. No ground disturbance observed.
17	Physical construction	Disturbed farming activity	Construction activities on cropping land timed to avoid disturbance of field crops (within one month of harvest wherever possible).	Complied with (Refer Section 5.2.5). Excavations not done during monsoon which is the cropping period. However, full compensation as per assessment of revenue authorities are being paid to land owner/farmer by IA/MSPCL in case of inevitable damages. Till date no grievance has been received in this regard
18	Mechanized construction	Noise, vibration and operator safety, efficient operation	Construction equipment to be well maintained.	Complied with (Refer Section 5.3.5). Some noise is unavoidable during day time but no noise at night as no work is being undertaken at night. Noise levels' measurements are done regularly by IA & Construction contractor. Noise level measured during site visits to all active sites found to be within permissible limits (<75 dB).

Cl. No.	Project activity/ stage	Potential impact	Proposed mitigation measures	Compliance Status
				Till date no grievance has been received in this regard
		Noise, vibration, equipment wear and tear	Turning off plant not in use.	Complied with.
19	Construction of roads for	Increase in airborne dust particles	Existing roads and tracks used for construction and maintenance access to the line wherever possible.	Complied with. Existing roads and tracks have been used for construction and maintenance. However, only 95 m and 22.5 m of new road have been constructed at Tuilaphai and Sanjenbam respectively.
	accessionity	Increased land requirement for temporary accessibility	New access ways restricted to a single carriageway width within the RoW.	Complied with. Most of the tower locations are easily accessible through existing roads/ paths. All substations sites are located close to existing road.
		Safety of Iocal villagers	Coordination with local communities for construction schedules, Barricading the construction area and spreading awareness among locals	Complied with (Refer Section 5.4.2). Excavated areas are barricaded and restriction to enter work site during construction have been strictly followed. Till date no grievance has been received in this regard
20	Construction activities	Local traffic obstruction	Coordination with local authority/ requisite permission for smooth flow of traffic	Complied with. Most of the tower/pole locations are in farm/barren land. Hence, no traffic obstruction is witnessed. For substation location, smooth traffic flow is ensured by project authorities/contractor in close coordination with local authorities wherever necessary.
21	Temporary blockage of utilities	Overflows, reduced discharge	Measure in place to avoid dumping of fill materials in sensitive drainage area	Complied with (Refer Section 5.3.5). No dumping is observed. All overburden is managed optimally by reutilizing it as fill materials.

C. No.	Project activity/ stage	Potential impact	Proposed mitigation measures	Compliance Status
22	Site clearance	Vegetation	Marking of vegetation to be removed prior to clearance, and strict control on clearing activities to ensure minimal clearance.	Complied With. Prior to undertaking clearance, marking has been undertaken to ensure minimal removal of vegetation during detailed survey. Minimum trees have been felled for construction of T&D network and substations. (Refer Section 4.6.4)
		Fire hazards	Trees allowed growing up to a height within the RoW by maintaining adequate clearance between the top of tree and the conductor as per the regulations.	Complied With. Regulated felling in RoW is being carried out with the permission of owner and revenue authorities keeping required electrical clearance as per applicable norms (CEA's regulations, 2010 (Measures related to safety & electric supply)
23	Trimming /cutting of trees within RoW	Loss of vegetation and deforestation	Trees that can survive pruning to comply should be pruned instead of cleared.	Complied With. Actual damage/tree felling is minuscule and limited to 3m strip below each conductor and not in entire RoW. However, after stringing natural vegetation is allowed to regrow in all these cleared strips except for one strip which is kept clear of vegetation for maintenance purpose. In remaining RoW area, only pruning/ pollarding is done to maintain electrical clearance.
			Felled trees and other cleared or pruned vegetation to be disposed of as authorized by the statutory bodies.	Complied With. Felled trees are handed over to land owner. IA/MSPCL have no role in storage or disposal of felled trees/wood
24	Wood/ vegetation harvesting	Loss of vegetation and deforestation	Construction workers prohibited from harvesting wood in the project area during their employment, (apart from locally employed staff continuing current legal activities)	Complied with. Cooking Gas/ fuel wood is being provided by the Contractor.

	Project activity/ stage	Potential impact	Proposed mitigation measures	Compliance Status
25	Surplus earthwork/soil	Runoff to cause water pollution, solid waste disposal	Soil excavated from tower footings/ substation foundation disposed of by placement along roadsides, or at nearby house blocks if requested by landowners	Complied with (Refer Section 5.4.1). Soil backfilled and excess spread out evenly and compacted. Excavated soil was properly stored and no dumping observed in visited sites/ location.
26	Substation construction	Loss of soil	Loss of soil is not a major issue as excavated soil will be mostly reused for filling. However, in case of requirement of excess soil the same will be met from existing quarry or through deep excavation of existing pond or other nearby barren land with agreement of local communities	Complied with (Refer Section 5.4.1, 5.4.4 & 5.4.5). Excavated soil used optimally for backfilling and distribution within the substations' boundary is adequate. However, for 33/11 kV substations at Andro & Sanjenbam where excess soil was required, the same borrowed from private land with due consent from land owner.
		Water pollution	Construction activities involving significant ground disturbance (i.e. substation land forming) not undertaken during the monsoon season	Complied with No construction during monsoons. No seepage or water pollution observed.
27	Site clearance	Vegetation	Tree clearances for easement establishment to only involve cutting trees off at ground level or pruning as appropriate, with tree stumps and roots left in place and ground cover left undisturbed	Complied with Already explained at clause no. 23.
28	Substation foundation/ Tower erection disposal of surplus earthwork/fill	Waste disposal	Excessfill from substation/tower foundation excavation disposed of next to roads or around houses, in agreement with the local community or landowner	Complied with (Refer Section 5.4.1 & 5.4.4) Excavated soil optimally used. Backfilling and spreading of excess soil within substation area undertaken by project authorities.
29	Storage of chemicals and materials	Contamination of receptors (land, water, air)	Fuel and other hazardous materials securely stored above high flood level.	Proper compliance to be ensured. To be stored in designated area inside the premise at most sites.
30	Construction schedules	Noise nuisance to neighbouring properties	Construction activities only undertaken during the day and local communities	Complied with Construction in day time only

.	Project activity/ stage	Potential impact	Proposed mitigation measures	Compliance Status
			informed of the construction schedule.	
31	Provision of facilities for construction workers	Contamination of receptors (land, water, air)	Construction workforce facilities to include proper sanitation, water supply and waste disposal facilities.	Complied with (Refer Section 5.4.6). However, there is scope for further improvement in improving the living conditions of workers
32	Influx of migratory workers	Conflict with local population to share local resources	Using local workers for appropriate asks	Complied with (Refer Section 5.4.6). Local workforces have been given preference based on skill levels.
33	Lines through farmland	Loss of agricultural productivity	Use existing access roads wherever possible Ensure existing irrigation facilities are maintained in working condition Protect /preserve tops soil and reinstate after construction completed Repair /reinstate damaged bunds etc. after construction completed	Complied with. Observation already provided at Clause no 19 above. Repair/restoration done immediately wherever required. Till date no grievance has been received in this regard.
		Social inequities	Land owners/ Farmers compensated for any temporary loss of productive land as per existing regulation.	
34	Uncontrolled erosion/silt runoff	Soil loss, downstream siltation	Need for access tracks minimised, use of existing roads. Limit site clearing to work areas Regeneration of vegetation to stabilise works areas on completion (where applicable) Avoidance of excavation in wet season Water courses protected from siltation through use of bunds and sediment ponds	Complied with (Refer Section 5.4.1). Observation already provided at Clause no 19 above. Construction during monsoon avoided as far as possible.
35	Nuisance to nearby properties	Losses to neighbouring land uses/ values	Contract clauses specifying careful construction practices. As much as possible existing access ways will be used	Complied with (Refer Section 5.4.2). Good construction practices with proper scheduling of construction activities observed in all active sites. No major

		and public	technologies to minimise hazards Security fences around substations Barriers to prevent climbing on/ dismantling of transmission Appropriate warning signs on facilities Electricity safety awareness raising in project areas	Used of technology like tripping line/substation in milliseconds in case of any hazards. Boundary and Security fences are maintained at each substation. Sufficient barriers with warning sinages are maintained at appropriate places of line/substation. Further, regular awareness/mock drill on electrical safety and other occupational hazards are being undertaken.
48	Operations and maintenance staff skills less than acceptable	Unnecessary environmental losses of various types	Adequate training in O&M to all relevant staff of substations & transmission/distribution line maintenance crews. Preparation and training in the use of O&M manuals and standard operating practices	Being complied. Regular trainings are being imparted to staffs engaged in O & M activity based on their skill at regular interval
49	Inadequate environmental monitoring.	Diminished ecological and social values.	Staff to receive training in environmental monitoring of project operations and maintenance activities.	Being complied.
50	Equipment specifications and design parameters	Release of chemicals and gases in receptors (air, water, land)	Processes, equipment and systems using cholofluorocarbons (CFCs), including halon, should be phased out and to be disposed of in a manner consistent with the requirements of the Govt.	Complied/ Being complied. Already part of equipment specification (CFC Free)
51	Transmission/ distribution line maintenance	Exposure to electromagnetic interference	Transmission/ distribution line design to comply with the limits of electromagnetic interference from overhead power lines	Complied/ Being complied. Designed as per guidelines of ICNIRP and ACGIH and checked by CPRI &M/s PTI, USA.
52	Uncontrolled growth of vegetation	Fire hazard due to growth of tree/shrub /bamboo along RoW	Periodic pruning of vegetation to maintain requisite electrical clearance. No use of herbicides/ pesticides	Being complied.
53	Noise related	Nuisance neighbouring properties	Substations sited and designed to ensure noise will not be a nuisance.	Complied/ being complied. The average noise level reported at the boundary of substation is well within permissible limit.

5.9 CONCLUSIONS

It is vivid from the above discussion that all transmission & distribution line routes and substations location have been selected judiciously by considering the technical, environmental, socio-economic aspects. Though some changes in line length & route alignment have been observed in transmission /distribution lines as compared to IEAR scope but as a result careful route selection IA could able to avoid ecologically & socially sensitive areas including forest, protected areas, PCR etc. completely in all the lines and substations being implemented under this project.

The provisions of IEAR & EMP are being implemented at ground level and strict compliance by construction contractors is ensured through regular monitoring by IA. So far, no major impacts apart from earlier identified impacts are anticipated due to such changes in scope. Besides, all other applicable laws/rules/regulations of the country & funding agencies are being complied with and till date no violation/ penalty with respect to contravention of any regulations has been reported. During assessment, it has also been observed that so far, the project has achieved zero fatality with no major noncompliance of EMP/Contract provisions as stipulated in IEAR, which is an indicative of the strict vigil of the IA.

It has also emerged from the survey & PRA exercise that the PAPs were appreciative of the project and hoped that the power scenario would improve after commissioning of the project. Local people also benefited through project related employment that was being generated. However, following suggestions may be considered to further improve the safeguard measures and also enhance the environmental sustainability of project.

- It has been observed that till date no Environment Officer/ staff responsible for EHS has been posted on permanent basis in Manipur. In the past 2 Environment Officer/ staff responsible for EHS had been posted, however, their tenure in the state was for couple of months.
- During the construction phase, the implementing agency needs to ensure strict compliance of the contract provisions/EMP by Contractor especially in respect of workers health and safety.
- Along with labours, supervisors, engineers and Staff of Implementing Agency (IA) should also need to follow the health and safety precautions.
- Need of regular induction and training program for labours and engineers at all sites.
- Training for PMU staff regarding monitoring and implantation of EMP as proposed in IEAR. It is suggested to deploy more environmental

professionals for effective environmental monitoring and reporting system.

- Lack of coordination between IA officers and contractors regarding implementation of Health and Safety Plan.
- Records of labour registration, health checkup of labours and other working staff need to be maintained at all sites and strictly monitoring to avoid engagement of child labour.
- Training and awareness regarding cleanliness and solid waste disposal to maintain the hygiene in the labour camps and construction sites.
- Demarcation and protection for sites where work has been on hold due to various reasons to avoid accidents and runoff of excavated soil from construction sites
- Project staff of the implementing agency should be well versed with the contents of the IEAR so as to ensure proper compliance by the contractors.

Overall, the commissioning of the project will augment the power distribution and availability in the region which will further catalyze economic activity and development of the area/region.

Chapter

6

MONITORING AND ORGANIZATION SUPPORT STRUCTURE

For smooth implementation of this project, following administrative and functional set up have been institutionalized for project implementation, review and monitoring etc.

6.1 ADMINISTRATIVE ARRANGEMENT FOR PROJECT IMPLEMENTATION

Central Project Implementation Unit (CPIU) - A body responsible for coordinating the preparation and implementation of the project housed within the IA's offices at Guwahati. The "Project-In-Charge" of IA & Head of each of the SPCU shall be a member of CPIU.

State Project Coordination Unit (SPCU) – A body formed by the State Utility and responsible for coordinating with IA in preparing and implementing the project at the State level. It consists of experts across different areas from the Utility headed by an officer of the rank not below Chief Engineer, from the Utility.

Project Implementation Unit (PIU) — A body formed by the IA, including members of Utility on deputation, and responsible for implementing the Project across the State, with its personnel being distributed over the work site/s & operating in close association with the SPCU/ CPIU. PIU reports to the State level "Project Manager" nominated by the Project-in-Charge of IA. The IA has a Core team stationed at the CPIU on a permanent basis, and other IA officers (with required skills) make visits as and when required by this core team. This team represents IA is responsible for all coordination with SPCU, PIU, within IA and MoP, GoI. CPIU also assists MoP, GoI in monitoring project progress and coordination with The Bank.

6.2 REVIEW OF PROJECT IMPLEMENTATION PROGRESS

To enable timely implementation of the project/subprojects, following committee has been set up to review the progress;

A. Joint Co-ordination Committee (JCC): IA and SPCU nominate their representatives in a body called JCC to review the project. IA specifies quarterly milestones or targets, which are reviewed by JCC through a formal monthly review meeting. This meeting forum is called as Joint Co-ordination Committee Meeting (JCCM). The IA convenes & keeps record of every meeting. MoP, GoI and The Bank join in as and when needed.

- **B.** High Power Committee (HPC): The Utility in consultation with its State Government has constituted a High Power Committee (HPC) consisting of high level officials from the Utility, State/ District Administration, Law enforcement agencies, Forest Department, etc. so that various permission/ approvals/ consents/ clearances etc. are processed expeditiously so as to reach the benefits of the Project to the end consumers. HPC meets on bimonthly basis or earlier, as per requirement. This forum is called as High Power Committee Meeting (HPCM) and the SPCU keeps records of every meeting. Minutes of the meeting will be shared with all concerned and if required, with Gol and The Bank.
- **C. Contractor's Review Meeting (CRM):** Periodic Review Meeting is held by officials of PIU with Contractors at field offices, State Head Quarters (PIU location) and if required with core team of IA at Guwahati. These meetings are called "Contractor's Review Meeting" (CRM). PIU shall keep a record of all CRMs, which shall be shared with all concerned and if required, with Gol and The Bank.
- **D.** Review meetings are held among MoP, GoI, The Bank, State Government, Utility and IA, at four (4) months interval or earlier if needed, primarily to maintain oversight at the top level, and also to debottleneck issues that require intervention at GoI/ State Government level. Minutes of the meeting shall be prepared by IA and shared with all concerned.

6.3 E&S MONITORING

The arrangement for monitoring and reviewing of project from the perspective of environment and social management forms part of overall arrangements for project management and implementation environment. Environmental monitoring is a continuous process throughout the Project life cycle starting from site selection to construction and maintenance stage. As IA, POWERGRID endeavours to implement the project in close coordination with the respective state power utilities and departments. POWERGRID has been implementing the project based on the Implementation/Participation agreements that were signed separately between POWERGRID and the Power utilities.

The IA has appointed dedicated Environment Officer in each state including Manipur to oversee the E&S management. Besides, MSPCL also has a separate cell at the Circle office level namely Environment and Social Management Unit (ESMU) headed by Chief Engineer (Power) for proper implementation and

monitoring of environmental & social management measures. Apart from day to day E&S monitoring other major responsibilities are;

- Coordinating environmental and social commitments and initiatives with various multilateral agencies, MoEF&CC and Govt. of Manipur.
- Coordination of all environmental activities related to a project from conceptualization to operation and maintenance stage.
- Advising site offices to follow-up with the state forest offices and other state departments for expediting forest clearances and other E&S issues of various projects.
- Providing a focal point for interaction with the MoEF&CC for expediting forest clearances
- Training of Circle and Site officials on E&S issues arising out of Transmission/Distribution projects and their management plan.
- Training of other departments to familiarize them with the ESPP document.

Additionally, Field In-Charge reviews the progress on daily basis and periodic review by higher management including review by Heads of SPCU and CPIU undertaken wherein apart from construction issues the environmental aspects of the projects are discussed and remedial measures taken wherever required. Besides, Periodic Contractor's Review Meeting (CRM) are being held by officials of PIU with Contractors at field offices, State Head Quarters (PIU location) and with CPIU at Guwahati for better co-ordination and resolution any pending issues. The World Bank mission team also visits various sites every six months to review the progress status including ground level implementation of safeguard measures. Any observation/agreed action plan suggested by the Bank is religiously complied in time bound manner. Additionally, review meeting among MoP, GoI, The Bank, State Governments., Utility and IA being held periodically to maintain oversight at the top level and also to debottleneck issues that require intervention at GoI/ State Government level.

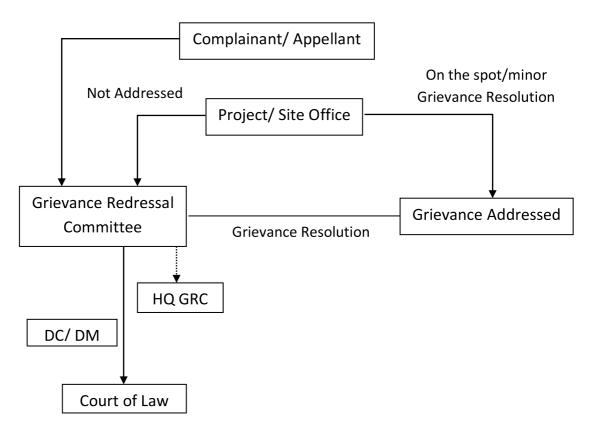

The Capacity building and Institutional Strengthening program of the IA is held intermittently to enhance the skills of the project officials. Besides, separate E&S training are also organized for Official of State Utility under Capacity Building & Institutional Strengthening (CBIS) programme. Further, State utility meetings between IA and MSPCL are held on a monthly/ bimonthly basis to assess the work progress and difficulties encountered in respect of land acquisition, RoW and compensation if any.

The IA has a continuous monitoring mechanism of the project w.r.t. compliance of the mitigation measures as stipulated in the IEAR. Thus, the

adherences to the clauses by the contractors are regularly monitored especially in respect of various implementations of E&S measures including health and safety aspects. Due to such strong institutional support structure coupled with monitoring mechanism in place, no major non-compliance was observed/reported during the implementation of projects till date. The project has so far had zero fatality which is indicative of the strict vigil of the IA. During the present study, it was observed that mitigation measures as suggested in IEAR are mostly complied with even though some gaps were found with respect to proper documentation and condition of labour camp at one of the DMS sub-station.

6.4 GRIEVANCE REDRESSAL MECHANISM (GRM)

Grievance Redress Mechanism (GRM) is an integral and important mechanism for addressing/resolving the concern and grievances in a transparent and swift manner. In accordance with the provision in ESPPF, Grievance Redress Committees (GRC) have to be constituted in Manipur both at the project/site level and at Corporate/HQ. This GRC is aimed to provide a trusted way to voice and resolve environment & social concerns of the project, and to address the concerns of the affected person/community in a time bound manner without impacting project implementation. The flow chart showing Grievance Redressal Mechanism is presented below.

The above referred GRCs are meant to act as supplement/ complement and in no way substitute the legal systems, especially embedded within RFCTLARR Act 2013, The Electricity Act, 2003, and Right to Information Act.

Apart from above, grievance redressal is in built in crop/tree/tower footing compensation process where affected persons are given a chance to place their grievances after issuance of notice by revenue officials on the basis of assessment of actual damages. Grievances received towards compensation are generally addressed in open forum and in the presence of many witnesses. Process of spot verification and random checking by the district collector/ its authorized representative also provides forum for raising the grievance towards any irregularity/complain. Moreover, MSPCL & POWERGRID officials also address to the complaints of affected farmers and the same are forwarded to revenue official for doing the needful, if required.

It may also be noted that concerns of public are addressed regularly through public consultation process which started from project planning to construction and will be continued in operation and maintenance also. Besides, many concerns/grievances from affected persons/public have been received by Site Offices which are also regularly tracked for early resolution. However, it has been observed that most of them were minor in nature and were resolved instantly and amicably by Site Officials after discussion & deliberation with affected person/ in consultation of revenue/district officials.

6.4.1 Grievances Received & Resolved

Till date only verbal grievances have been received at site during project execution. These grievances were resolved at the site itself. Details of complaints received up to May, 2021 are given in **Table 6.1**.

Table 6.1: Details of Complaints

ANNEXURE I

List of Angiosperm

List of Angiosperms

Family	Name of Species
Malvaceae	Abutilon indicum
Fabacaea	Acacia farnesiana
Fabaceae	Acacia pennata
Amaranthaceae	Achyranthes aspera
Fabaceae	Acrocarpus fraxinifolius
Rubiaceae	Adina cordifolia
Asteraceae	Ageratum conyzoides
Simaroubaceae	Ailanthus integrifolia
Simaroubaceae	Alangium chinense
Fabaceae	Albizia chinensis
Fabaceae	Albizia procera
Betulaceae	Alnus nepalensis
Araceae	Alocasia fornicata
Zingiberaceae	Alpinia nigra
Altingiaceae	Altingia excelsa
Amaranthaceae	Amaranthus viridis
Zingiberaceae	Amomum dealbatum
Arecaceae	Areca catechu
Convolvulaceae	Argyreia argentea
Araceae	Arisaema concinnum
Asteraceae	Artemisia capillaris
Asteraceae	Artemisia nilagirica
Moraceae	Artocarpus chama
Moraceae	Artocarpus heterophyllus
Araceae	Arum dioscoridis
Poaceae	Arundinaria hirsuta
Poaceae	Arundo donax
Asparagaceae	Asparagus racemosus
Poaceae	Bambusa balcooa
Poaceae	Bambusa khasiana
Poaceae	Bambusa pallida
Poaceae	Bambusa tulda
Acanthaceae	Barleria cristata
Fabaceae	Bauhinia purpurea
Fabaceae	Bauhinia variegata
Begoniaceae	Begonia nepalensis
Begoniaceae	Begonia palmata
Asteraceae	Bidens pilosa
Phyllanthaceae	Bischofia javanica
Malvaceae	Bombax ceiba
Caryophyllaceae	Brachystemma calycinum
Araliaceae	Brassaiopsis glomerulata
Araliaceae	Brassaiopsis hainla
Crassulaceae	Bryophyllum pinnatum
Scrophulariaceae	Buddleja asiatica
Orchidaceae	Bulbophyllum roxburghii

Family	Name of Species
Orchidaceae	Bulbophyllum wallichii
Arecaceae	Calamus erectus
Arecaceae	Calamus tenuis
Lamiaceae	Callicarpa arborea
Cyperaceae	Carex longipes
Fagaceae	Castanopsis indica
Cannabaceae	Celtis australis
Apiaceae	Centella asiatica
Orchidaceae	Ceratostylis teres
Amaranthaceae	Chenopodium album
Poaceae	Chimonobambusa callosa
Asteraceae	Chromolaena odorata
Poaceae	Chrysopogon aciculatus
Meliaceae	Chukrasia tabularis
Lauraceae	Cinnamomum glaucescens
Menispermaceae	Cocculus orbiculatus
Araceae	Colocasia forniculata
Combretaceae	Combretum decandrum
Commelinaceae	Commelina benghalensis
Costaceae	Costus speciosus
Fabaceae	Crotalaria pallida
Commelinaceae	Cyanotis vaga
Poaceae	Cynodon dactylon
Cyperaceae	Cyperus exaltatus
Cyperaceae	Cyperus rotundus
Fabaceae	Dalbergia pinnata
Solanaceae	Datura metel
Urticaceae	Debregeasia longifolia
Orchidaceae	Dendrobium hookerianum
Poaceae	Dendrocalamus giganteus
Poaceae	Dendrocalamus hamiltonii
Poaceae	Dendrocalamus strictus
Fabaceae	Derris scandens
Poaceae	Digitaria ciliaris
Dilleniaceae	Dillenia indica
Dioscoreaceae	Dioscorea bulbifera
Orchidaceae	Diplomeris pulchella
Dipterocarpaceae	Dipterocarpus retusus
Caryophyllaceae	Drymaria diandra
Lythraceae	Duabanga grandiflora
Urticaceae	Elatostema sessile
Lamiaceae	Elsholtzia blanda
Juglandaceae	Engelhardtia spicata
Poaceae	Eragrostis amabilis
Acanthaceae	Erantheumum pulchellum
Orchidaceae	Eria acervata

Erythrina variegata
Euphorbia pulcherrima
Fagopyrum esculentum
Ficus glomerata
Ficus roxburghii
Ficus semicordata
Garuga pinnata
Girardinia diversifolia
Globba marantina
Gmelina arborea
Grewia nervosa
Gynocardia odorata
Hardwickia binata
Hedychium spicatum
Hodgsonia heteroclita
Hydrangea macrophylla
Impatiens bicornuta
Imperata cylindrica
Jasminum amplexicaule
Juglans regia
Justicia adhatoda
Kydia calycina
Lagerstroemia parviflora
Lantana camara
Lecanthus peduncularis
Litsea monopetala
Loranthus gracilifolius
Macaranga denticulata
Magnolia champaca
Magnolia liliifera
Mallotus paniculatus
Mangifera indica
Mangifera sylvatica
Melastoma malabathricum
Mesua ferrea
Mikania micrantha
Mimosa pudica
Moringa oleifera
Morus macroura
Murraya paniculata
Musa acuminata
Musa balbisiana
Musa laterita
Ocimum tenuiflorum
Oroxylum indicum
Ostodes paniculata
Oxalis corniculata
Oxalis aepilis
Oxalis debilis Oxyspora paniculata
Oxyspora paniculata Pandanus odorifer

Family	Name of Species
Polygonaceae	Persicaria chinensis
Lauraceae	Phoebe hainesiana
Lauraceae	Phoebe paniculata
Poaceae	Phragmites karka
Phyllanthaceae	Phyllanthus emblica
Solanaceae	Physalis minima
Plantaginaceae	Plantago major
Poaceae	Poa annua
Poaceae	Pogonatherum biaristatum
Commelinaceae	Pollia subumbellata
Polygonaceae	Polygonum affine
Polygonaceae	Polygonum pubescens
Malvaceae	Pterospermum acerifolium
Rosaceae	Pyrus pashia
Fagaceae	Quercus serrata
Anacardiaceae	Rhus chinensis
Euphorbiaceae	Ricinus communis
Rosaceae	Rubus ellipticus
Rosaceae	Rubus paniculatus
Poaceae	Saccharum bengalense
Poaceae	Saccharum spontaneum
Sapindaceae	Sapindus rarak
Phyllanthaceae	Sauropus androgynus
Theaceae	Schima wallichii
Fabaceae	Senna tora
Dipterocarpaceae	Shorea assamica
Malvaceae	Sida cordifolia
Malvaceae	Sida rhombifolia
Solanaceae	Solanum americanum
Solanaceae	Solanum viarum
Sterculiaceae	Sterculia villosa
Acanthaceae	Strobilanthes auriculatus
Acanthaceae	Strobilanthes hamiltoniana
Myrtaceae	Syzygium tetragonum
Lamiaceae	Tectona grandis
Combretaceae	Terminalia myriocarpa
Poaceae	Themeda villosa
Acanthaceae	Thunbergia coccinea
Poaceae	Thysanolaena latifolia
Meliaceae	Toona ciliata
Arecaceae	Trachycarpus martianus
Cannabaceae	Trema orientalis
Araliaceae	Trevesia palmata
Malvaceae	Urena lobata
Urticaceae	Urtica dioica
Orchidaceae	Vanda coerulea
Violaceae	Viola diffusa
Poaceae	Yushania hirsuta
Zingiberaceae	Zingiber officinale

The Project Manager
M/s Shyama Power India Limited
Imphal, Manipur

Subject: Approval of Line material schedule for Renovation of Yurembam-Karong-Mao section of 132kV S/C Yurembam-Karong-Kohima Line.

Dear Sir,

This is with reference to your letter vide reference no SPIL/IMP/TW-06/2019429-001 dated on 29.04.2019 regarding the Line material schedule for Renovation of Yurembarn-Karong-Mao section of 132kV S/C Yurembarn-Karong-Kohima Line under package MAN-TW-06 of NERPSIP, Manipur, it is to intimate you that the same has been checked and found to be in order.

This is for your kind information and further necessary action please.

Thanking you.

Enclo:

Approved copy of Line material schedule for the above mentioned line (1 set)

Yours faithfully

(H. Rajen Singh) Sr. DGM (NERPSIP), Imphal

Copy to:

Sr. General Manager, NERPSIP, Imphal for kind information.

ANNEXURE IV

Social Management Framework

SOCIAL MANAGEMENT FRAMEWORK

Part A: Acquisition of Lands and Structures.

1. The availability of land for substations is a potential social issue as fresh lands will be required for construction of substations. MSPCL shall secure/acquire the required land either through direct purchase on willing buyer & willing seller basis on negotiated rate or by invoking provisions of RFCTLARRA, 2013. The present land availability status of substations involved in tranche-1 is provided in **Table –1**.

Table – 1: Land Availability Status for Substation

Sl. No.	Name of the substation	Scope of work	Land Status
A.	Transmission Substations		
1	132/33 kV Gamphajol	New	
2	132/33 kV Imphal	Extension	
3	132/33 kV Ningthoukhong	Extension	
4	132 kV Kackching	Extension	Land for all substations are available
5	132 kV Yainganpokpi	Extension	with MSPCL except for Gamphajol.
6	132/33 kV Kongba	Extension	
7	132 kV Churachandpur	Extension	
8	132/33 kV Rengpang	Augmentation	
9	132/33 kV Jiribam	Augmentation	
В.	Distribution Substations		
1	33/11 kV Distribution	New/	Land for 13 substations available
	Substation (24 Nos.)	Augmentation	with MSPCL. For remaining
			substation land being acquired
			through private purchase on
			negotiated rate.

- 2. As per the provisions of ESPPF land for substations covered under tranche-1 can be secured through following three methods;
 - i) Purchase of land on willing buyer & Willing Seller basis on negotiated rate;
 - ii) Voluntary Donation; and
 - iii) Involuntary Acquisition. .
- 3. In case of procurement of land through private purchase, MSPCL shall ensure that compensation/rate for land is not less than the rate provided in the new land acquisition act, 2013. The finalization of land price/negotiation shall be through a committee. In order to comply with this provision MSPCL may organize an awareness camp where provisions of new act in respect of basis/modalities of compensation calculation shall be explained to land owners with specific State provision if any.

- 4. In the case of voluntary donation of land, it is to ascertained that the land owner/user(s) are not subjected to undue pressure for parting of land. Apart from this following shall also be ensured:
 - All out efforts shall be made to avoid any physical relocation/displacement due to loss of land;
 - The MSPCL shall facilitate in extending 'gratitude' to the land donor(s) in lieu of the 'contribution' if so agreed. The same shall be documented in the shape of MoU between donor and utility.
 - Subsequently title of land shall be transferred in the name of MSPCL.

All land donations (as well as purchases) will be subject to a review/ approval from a committee comprising representatives of different sections including those from the IA and GoMan.

- 5. In case of land acquired through involuntary acquisition, provisions of RFCTLARRA, 2013 shall be adopted. RFCTLARRA, 2013 has replaced the old Land Acquisition Act, 1894 and has come into force from 1st January 2014. The new act i.e. RFCTLARRA, 2013 authorizes State Govt. (i.e. GoMan) or its authorized Government agency to complete the whole process of acquisition of private land by following the laid down procedures in the act/rules which include detailed Social Impact Assessment (SIA) and preparation/disclosure of Social Impact Assessment Plan (SIMP). Responsibility for SIA and R&R rests with the government of Manipur and MSPCL's responsibility is limited to identification and selection of suitable land based on technical requirement and ensuring budget allocation.
- 6. The provisions of new RFCTLARR Act, 2013 has brought about synergies with the World Bank policy and practices. These imply provisions like Social Impact Assessment; R&R Provisions and Entitlements; Focus on those losing livelihoods; Census surveys and R&R Plan; Providing options and choices; Replacement cost of Land and Assets (Net of Taxes); Additional provisions for disadvantaged groups; Full payment of compensation and R&R prior to taking over of land and assets and Consultations & Disclosures, Post implementation social audit and impact evaluation etc that are also key to the World Bank Involuntary Resettlement Policy.

Safeguards against land acquisition:

7. The act has many provisions which will safeguard against indiscriminate acquisition of farm land and associated impacts like project specific SIA to conclude whether the proposed acquisition serves the public purpose; estimation of affected families and families likely to be displaced; extent of lands, public and private, houses, settlements and other CPRs likely to be affected; whether the extent of land proposed is absolutely bare minimum requirement; whether other alternative sites were considered and found not feasible and whether the social benefits outweigh social costs. Act has special provisions for land inhabited by SCs, STs; provisions restricting acquisition of land in excess of requirement. It discourages acquisition of multi-crop and irrigated land, and makes consent of land owners mandatory for private & PPP projects.

Entitlements:

8. The entitlements with regard to compensation and assistances towards land acquisition or loss of any assets or livelihood for all categories of people being affected due to land acquisition is briefly outlined in **Table – 2**.

Table -2: Compensation and R & R Entitlement framework for Land Acquisition

A. Compre	nensive Compensation Package					
Eligibility for Entitlement	Provisions					
The affected families	Determination of Compensation:					
• Land Owners: includes any perso	1. Market value of the land					
 i) whose name is recorded as (he owner of the land or building or part thereof, in the records of the authority concerned;	 as specified in the Indian Stamp Act, 1899 or the average of the sale price for similar type of land situated in the village or vicinity, or consented amount of compensation as agreed in case of acquisition of lands for private companies or for public private partnership project. 					
Rights) Act, 2006 or under any	whichever is higher					
other law for the time being in force;	Market value x Multiplier* between 1 to 2 in rural areas only (No multiplier in urban areas).					
iii)who is entitled to be granted Patta	2. Value of the assets attached to land:					
rights on the land under any law of the State including assigned	Building/Trees/Wells/Crop etc. as valued by relevant govt. authority;					
lands: or	Land compensation = 1+2					
iv)any person who has been	3. Solatium: 100% of total compensation					
declared as such by an order of the court or Authority;	Total Compensation : 1+2+3					

(*) Precise scale shall be determined by the State Govt.

The indicative values of multiplier factor based on distance from urban areas as provided in the act.

Radial Distance from Urban area (Km)	Multiplier Factor
0-10	1.00
10-20	1.20
20-30	1.40
30-40	1.80
40-50	2.00

B. R&R Package

Elements of Rehabilitation and Resettlement Entitlements for all the affected families (both land owners and the families whose livelihood is primarily dependent on land acquired) in addition to compensation provided above

Sl. No.	Elements of R& R Entitlements	Provision
1.	Subsistence grant/allowance for displaced families	Rs. 3000 per month per family for 12 months
2.	The affected families shall be entitled to:	 a. Where jobs are created through the project, mandatory employment for one member per affected family; or b. Rupees 5 lakhs per family; or c. Rupees 2000 per month per family as annuity for 20 years, with appropriate index for inflation; The option of availing (a) or (b) or (c) shall be that of the affected family
3.	Housing units for displacement: i) If a house is lost in rural areas: ii)If a house is lost in urban areas	 i. A constructed house shall be provided as per the Indira Awas Yojana specifications. ii. A constructed house shall be provided, which will be not less than 50 sq. mts. in plinth area. In either case the equivalent cost of the house may also be provided in lieu of the house as per the preference of the project affected family. The stamp duty and other fees payable for registration of the house allotted to the affected families shall be borne by the Requiring Body.
4.	Transportation cost for displaced families	Rs 50,000/- per affected family
5.	Resettlement Allowance (for displaced families)	Onetime Rs 50,000/- per affected family
6.	Cattle shed/ petty shop cost	Onetime financial assistance as appropriate for construction as decided by St. Govt. subject to minimum of Rs.25,000/-
7.	Artisan/small traders/others (in case of displacement)	Onetime financial assistance as appropriate as decided by St. Govt. subject to minimum of Rs.25,000/-

Special Provisions for SCs/STs

In addition to the R&R package, SC/ST families will be entitled to the following additional benefits:

- 1. One time financial assistance of Rs. 50,000 per family;
- 2. Families settled outside the district shall be entitled to an additional 25% R&R benefits;
- 3. Payment of one third of the compensation amount at very outset;
- 4. Preference in relocation and resettlement in area in same compact block;
- 5. Free land for community and social gatherings;
- 6. In case of displacement, a Development Plan is to be prepared
- 7. Continuation of reservation and other Schedule V and Schedule VI area benefits from

Social Impact Management Plan (SIMP):

Establishment of Institutions

9. The following bodies are to be established permanently in the state (to cater to all projects proposed in future):

➣ The State Social Impact Assessment Unit;

- ✓ selecting the SIA team for each project from the individuals and institutions registered/empanelled in the State Database
- ✓ To develop Project specific ToR
- ✓ Ensuring no conflicts of interest involving the team members

> Land Acquisition Rehabilitation and Resettlement Authority

✓ Appointment of Presiding Officer

> The office of the Commissioner Rehabilitation & Resettlement

- ✓ Appointment of Commissioner Rehabilitation and Resettlement
- ✓ Appointment of Project Specific Administrator for Rehabilitation and Resettlement
- > The State Level Monitoring Committee
- > User-friendly website as a public platform to disclose entire work flow of each acquisition case.
- > Formulation of Expert group to study SIA report and recommendation
 - ✓ Commissioner, R&R to appoint the members of the Expert Group
 - ✓ Names of group members to be publically disclosed
- 10. On confirmation of the scheme and finalization of land after exploring alternative site, the MSPCL would submit a proposal for acquisition of private selected land detailing the extent of land and its exact location. After due process of approval the government shall notify the affected area where selected land is situated for conducting detailed social assessment.

Social Impact Assessments

Independent Agency/Institution on a project specific TOR. The SIA agency shall first consult the concerned Panchayat, Municipality, District/Village Council at village level or ward level in the affected area to carry out SIA study. SIA shall assess the purpose of acquisition and estimate the affected families, gender, social group carry out analysis regarding impact on community properties, assets and infrastructure particularly roads, public transport, drainage, sanitation, sources of drinking water, sources of water for cattle, community ponds grazing land, plantations, public utilities electricity supply and health care facilities. The SIA agency shall also prepare a Social Impact Management Plan (SIMP) listing ameliorative measures required for addressing the likely impact vis-à-vis intended benefit of the project. The SIA report and SIMP shall be subject to public hearing in the affected area after giving adequate publicity for the venue, time etc to ascertain the views of affected families/communities which shall be included in the SIA.

The final SIA report shall be published including its translation in local language and shall also be made available to Panchyats, District/Village Councils & Deputy Collector/District Magistrate office for wider circulation. Explicit consent will be required in the case of lands in respect of tribal areas from the Village Councils. The process flowchart of SIA is presented in **Fig-1**.

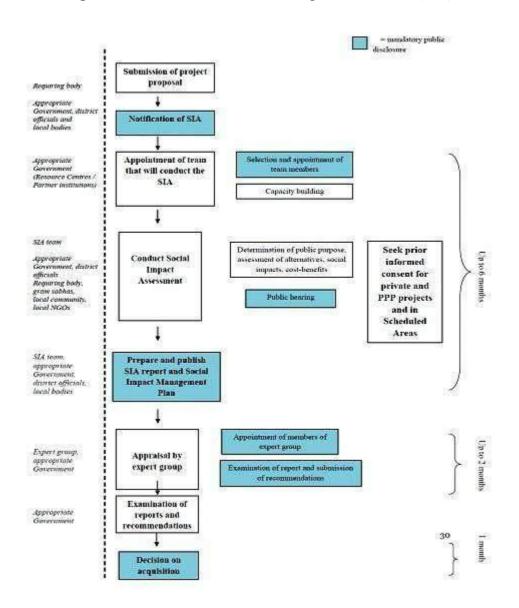

Fig-1 Process Flow chart of Social Impact assessment (SIA)

Compensation and Rehabilitation and Resettlement (R&R):

- Based on the SIMP, the Collector shall discuss the Package in a meeting with the Rehabilitation and Resettlement committee at project level, and submit the Package to Commissioner Rehabilitation and Resettlement along with his/her remarks.
- The Commissioner Rehabilitation and Resettlement shall, after due vetting, accords approval to the scheme and make it available in public domain.
- After approval of R & R plan by Commissioner R & R, the Collector shall issue two awards one for land compensation based on procedures described in act & State's rules

and second for R & R as per approved SIMP.

- The Collector shall take possession of land after ensuring that full payment of compensation as well as rehabilitation and resettlement entitlements are paid or tendered to the entitled persons within a period of three months for the compensation and a period of six months for the monetary part of rehabilitation and resettlement entitlements as approved and commencing from the date of the award.
- The Collector shall be responsible for ensuring that the rehabilitation and resettlement process is completed in all its aspects before displacing the affected families.
- The Collector shall, as far as possible. not displace any family which has already been displaced by the appropriate Government for the purpose of acquisition under the provisions of this Act, and if so displaced, shall pay an additional compensation equivalent to that of the compensation determined under this Act for the second or successive displacements.

The complete activity flow chart is described in **Fig -2**. It may take about three years to complete the processes. It is also mandatory that no construction can start without the full payment of the compensations.

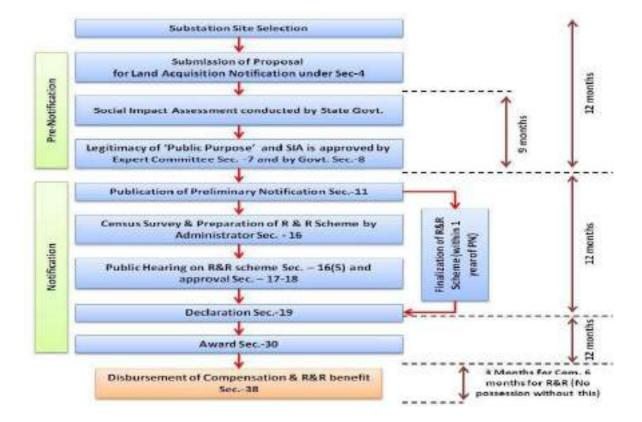

Fig. -2: Activity Chart of RFCTLARRA,2013

PART B:

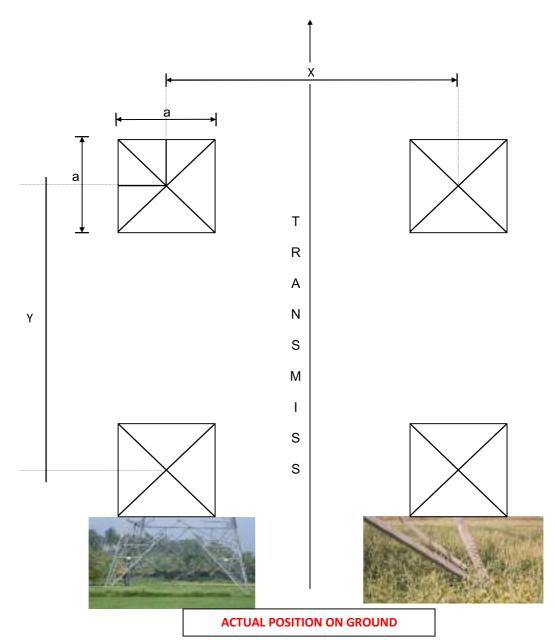

Compensation Plan for Temporary Damages (CPTD) towards Erection of Tower/ Poles for Transmission/ Distribution lines

- 1. Land requirements for erecting tower/ poles for transmission/ distribution lines are just minimal. All it requires is to place the foot, four of which warrants an area of 4-6 sq- ft. Lands in respect of the right of way are not acquired as agricultural activities can continue beneath the tower. Further, line alignments are done in such a way so as to avoid settlements and / or structures. Due to inherent flexibility in locating the poles, MSPCL avoids habituated area completely hence no relocation of population on account of TL/DL lines are envisaged. Thus, the actual impact is restricted to 4 legs of the tower. Agriculture can continue, as clearly depicted in the **Figure-3**. As per existing law, land for tower/pole and right of way is not acquired and agricultural activities are allowed to continue after construction activity. However, MSPCL pays compensation to the affected persons/ community for all damages including cost of land below tower to its owner without acquiring it. Thus, compensations are made for following:
 - (i) Land cost of tower footings;
 - (ii) Standing crops;
 - (iii) Trees, if any;
 - (iv) Other assets like well and
 - (v) Any other damages/ effects.

Capturing all these, the Implementing agency (IA) will prepare a Compensatory Plan for Temporary Damage (CPTD). The content/coverage of a typical CPTD is placed at the end.

- 2. **Process.** MSPCL through its "Bee" line survey (i.e. a desk review) on Survey of India (SOI) map (topo-sheets) preferably on 1:50,000 Scale, the Forest Atlas and or Google Earth map examine various route options at least 3 (Three) alternatives referring 'Bee' line as a guiding one between two or multiple origins of proposed transmission/distribution line avoiding/minimizing environmentally and socially sensitive areas based on base line data/information.
- 3. Taking reference to this desk review, a reconnaissance survey in-house or through other agency/ or walk-over survey is undertaken with hand-held GPS for on-site verifications to confirm findings of desk review survey or otherwise. During Recce or W/O survey it may also be possible to identify other better option of route following the criteria of avoidance & minimization, if so the same, after having collected/updated information/data may be considered as another alternative.
- 4. A Social (and Environmental) Assessment is conducted in respect of each of the chosen lines of alignment. The process involved extensive consultations with land owners/farmers and different stakeholders.

FIG. 3: TYPICAL PLAN OF TRANSMISSION LINE TOWER FOOTING

INDICATIVE MEASURES

X & Y = 10-15 METERS

a = 300- 450 mm

- 5. During the process public views and necessary inputs about surroundings/ villages/crops etc. are also necessary and noted for screening/scoping. After comparison and analysis of all E & S parameters so gathered for all alternatives and considering other significant economic benefit associated with the project/subproject, the most optimum route having minimum environment & social impact is selected for further investigation.
- 6. Site office will consults with state forest departments if the line is passing through forest areas. Revenue authorities will be consulted for their views on revenue/other lands. Experts' assistance will be taken, as appropriate, on valuing crops, trees and other assets.
- 7. Social Assessment concludes with: (i) selection of an optimum line; and (ii) a Social Management Plan viz., CPTD. All these are disclosed widely among the stakeholders as well as on the internet and evince a feedback. Due approval will be sought from District/ Village Councils. In case the scheme/project is implemented in predominantly tribal area a separate and comprehensive analysis in respect of likely impact both positive and negative shall be carried out and will be incorporated in the CPTD.
- 8. Responsibility for the conduction of SA, preparation of CPTD rests with the IA. The ultimate authority for vetting the affected persons and the nature and extent of compensations rests with the Collector. The entitlement matrix for planning compensation for possible impact is as follows:

Entitlement Matrix for CPTD

S. No	ISSUE/IMPACT	BENEFICIARY	ENTITLEMENT OPTIONS
1.	Land area below tower base.	Owner	100% land cost at market value as ascertained by revenue authorities or based on negotiated settlement without actual acquisition/title transfer.
2.	Loss/damage to crops and trees in line corridor	Owner/Tenant/ sharecropper/ leaseholder	Compensation to actual cultivator at market rate for crops and 8 years income for fruit bearing trees*. APs will be given advance notice to harvest their crops. All timber* will be allowed to retain by the owner.
3.	Other damages (if applicable)	All APs	Actual cost as assessed by the concerned authority.
4.	Loss of structure		
(i)	House	Titleholders	Cash compensation at replacement cost (without deduction for salvaged material) plus Rs. 25,000/- assistance (based on prevailing GOI norms for weaker section housing) for construction of house plus transition benefits as per category-5 below.
(ii)	Shop/ Institutions/ Cattle shed	Individual/ Titleholders	Cash compensation plus Rs. 10000/- for construction of working shed/shop plus

S. No	ISSUE/IMPACT	BENEFICIARY	ENTITLEMENT OPTIONS
			transition benefits as per category-5 below
5.	Losses during transition under (i) & (ii) above for Shifting / Transport	Family/unit	Provision of transport or equivalent cash for shifting of material/ cattle from existing place to alternate place
6	Tribal/ Vulnerable APs	Vulnerable APs1	One time additional lump sum assistance not exceeding 25% of total compensation on recommendation of State Authority/ADC/VC.

^{*} Assistance/help of Forest department for timber yielding trees and Horticulture department for fruit bearing trees shall be taken for assessing the true value.

- 9. A notice under Indian Telegraph Act/Electricity Act, 2003 is served to the landowners informing that the proposed transmission line is being routed through the property of the individual concerned. The notice shall contain the particulars of the land, ownership details and the details of the trees/crops inevitability likely to be damaged during the course of the construction of the proposed transmission line and acknowledgement received from land owner. A copy of said notice is further issued to the Revenue Officer, who has been authorized by the Manipur Govt. for the purpose of assessment/valuation and disbursement of compensation to the affected parties.
- 10. The revenue officer shall further issue a notice of intimation to the concerned landowner and inspect the site to verify the documents related to the proof of ownership and a detailed Mouja list is prepared for the identified trees and crops inevitability damaged during the course of the construction. For assessing the true value of timber yielding trees help of forest officials is taken and for fruit bearing trees help of Horticulture department is taken.
- 11. The Mouja list shall contain the land owner details type of tree/crop, its present age, variety, yielding pattern etc. and the same is prepared at site in the presence of the land owner. These Mouja lists are further compiled and a random verification is conducted by the concerned District Collector or his authorized representative in order to ascertain the assessment carried out by the revenue office is genuine and correct. After this process the District collector issues a tree cutting permit to MSPCL to enable removal / damage to the standing tree/crop identified in the line corridor.
- 12. Once the tree/crop is removed / damaged, MSPCL shall issue a tree cutting/crop damaged notice to the land owner with a copy to the Revenue Officer to process the compensation payment. Based on the above the compensation payment is generated by means of a computerized programme developed by the National Informatics Center exclusively for this purpose. The detailed Valuation statement thus generated using this programme is verified at various levels and approval of payment of compensation is accorded by the concerned District Collectors.

MSPCL − ESPPF Annexure − 3

11

¹ Vulnerable APs include scheduled tribes residing in scheduled areas/ physically handicapped/ disabled families etc.

13. On approval of compensation, the revenue officer shall further intimate the amount payable to the different landowners and MSPCL arranges the payment by way of Demand Draft to the affected parties. The payment is further disbursed at the local village office after due verification of the documents in presence of other witnesses.

Content of Compensation Plan For Temporary Damages (CPTD)

Section - I: Project Description: Brief description of the background, benefits of the project, objective of compensation plan.

Section – **II: Project Impacts:** Minimization of impacts, description of alternative studies made for proposed route of transmission line including systematic analysis of different alternative studied with reference to particular environmental & social parameters like involvement of forest, protected areas, significant economic benefit associated with the project and without the project etc. and reason for selection of proposed route, analysis of impacts including numbers of affected persons/household, land use traversed etc.

.

Section – III: Socio-economic and Environmental Analysis for CPTD: Description of the physical, physiographical, socio-economic condition of the project area including other demographic features of the project area, Preliminary Social assessment, Impact due to project location and design and Critical social review criteria

Section -IV: Compensation Framework: Description of compensation plan, Procedure for tree/crops/land compensation.

Section – V: Stakeholders Participation & Compensation: Public Consultation during Preliminary Survey and peoples reaction/suggestion if any, Plan for further consultation during implementation

Section – VI: Institutional Arrangements for Implementation and Monitoring: Describing the implementation schedule, Grievances Redressal Mechanism, Disclosure, Evaluation and monitoring plan. Budget provision for compensation

Part C: Tribal People Development Framework

The preliminary assessments made during the project preparation have established that there are tribal people in the project area. It is also ascertained that they do have a collective attachment to the project area particularly in the scheduled area and that they may get affected by the project interventions. Accordingly, to ensure focused and exclusive attention towards such tribals it is envisaged to develop a "Tribal People Development Plan" (TPDP). Since proposed investment programs involve many sub-projects/schemes linear in nature running in different geographical area of state due to which precise information about the tribal people likely to be impacted is not yet firmed up. In order to overcome this limitation, a Tribal People Development Framework (TPDF) is developed which sets out approach and methodology for the preparation of a TPDP.

TPDF Objectives and Policies

- 1. The objectives of the TPDF are to ensure that if indigenous peoples² (referred to as tribal in India) tribal are affected by a project/scheme they:
 - i) are adequately and fully consulted;
 - ii) receive benefits and compensation equal to that of the mainstream population:
 - iii) are provided with special assistance as per laws and policies because of their vulnerabilities vis-à-vis the mainstream population; and
 - iv) receive adequate protection against project adverse impacts on their culture identities.

There are several policies which provide a legal framework for ensuring dedicate attention to the tribals. Article 366(25) of the Indian constitution refers to Scheduled Tribes (STs) as those communities who are scheduled in accordance with Article 342 of the Constitution. According to Article 342 of the Constitution, STs are the tribes or tribal communities or part of or groups within these tribes and tribal communities which have been declared as such by the President through a public notification. Identification of tribes is a State subject. Thus, classification of a tribe would

² * Indigenous People (IP) referred as tribal in India are the distinct groups identified based on their social, cultural, economic, and political traditions and institutions, which are distinct from the mainstream or dominant society and culture. Tribal with similar cultural characteristics are known as 'Adivasi' in Hindi and are recognized as Schedule Tribes (STs) as per the Indian Constitution.

As per OP-4.10 definition these are Members of a distinct indigenous cultural group, Collective attachment to geographically distinct habitats or ancestral territories in the project area and to the natural resources in these habitats and territories, Customary cultural, economic, social, or political institutions that are separate from those of the dominant society or culture, An indigenous language, often different from the official language of the country or region

- depend on the status of that tribe in the respective State. Further the Fifth and Sixth Schedule of the constitution provides special provision for tribals in selected regions of the country.
- 2. The World Bank's Operational Policy on Indigenous Peoples (OP 4.10) aims at ensuring that the development process fosters full respect for the dignity, human rights and cultures of indigenous peoples, thereby contributing to the Bank's mission of poverty reduction and sustainable development. It also recognizes that the identities, cultures, lands and resources of indigenous peoples are uniquely intertwined and especially vulnerable to changes caused by development programs hence require special measures to ensure that they are included in and benefit from these programs as appropriate.

Identification of Indigenous Peoples

- 3. The term "Indigenous Peoples" is used in a generic sense to refer to a distinct, vulnerable, social and cultural group possessing the following characteristics in varying degrees:
 - (a) Self-identification as members of a distinct indigenous cultural group and recognition of this identity by others;
 - (b) Collective attachment to geographically distinct habitats or ancestral territories in the project area and to the natural resources in these habitats and territories;
 - (c) Customary cultural, economic, social, or political institutions that are separate from those of the dominant society and culture;
 - (d) An indigenous language, often different from the official language of the country or region.
- 4. The hill areas of the State are governed by a special State legislation i.e the Manipur Hill Areas District Councils Act, 1971. This Act has provisions similar to those contained in the Sixth Schedule and has established six Autonomous Hill District Councils in Manipur, covering 5 districts.

Tribal People Development Framework (TPDF)

- 5. The TPDF seeks to ensure that tribal communities are informed, consulted, and mobilized to participate in the subproject preparation. The Framework is intended to guide selection and preparation of additional subprojects under the Project where impacts on tribal people are identified to ensure better distribution of the Project benefits and promote development of the indigenous peoples in the Project areas. The framework is prepared in accordance with both the Indian Constitution provisions, RFCTLARRA, 2013 and World Bank's OP-4.10 and serves the following purposes:
 - (a) Identification of the tribal people likely to be impacted by the project interventions;

- (b) Assess the nature and extent of impacts likely to occur as a result of the project interventions;
- (c) Prepare a plan (TPDP) outlining measures towards avoiding/ minimizing the negative impacts as well as enhance positive impacts;
- (d) Outlines an approach for the conduction of social assessment for ensuring free, prior, and informed consultation with the affected tribal communities at each stage of project preparation and implementation;
- (e) Putting in place an implementation arrangements of the TPDP, its disclosure and mechanisms to address any grievances.

TPDF – Land Acquisition and Resettlement

- 6. Whenever after initial screening it is found that some land belonging to tribal community /communities is being needed to be involuntary acquired for setting up of a substation demonstrating/substantiating such acquisition is done only as a last resort by completing the technical investigation including assessment of alternatives and detailed surveys. The detailed report along with land requirement is submitted to the Government of Manipur (GoMan) for further processing as per provisions of RFCTLARRA, 2013. GoMe then initiates a SIA through an Independent Agency with a project specific terms of reference. The SIA agency shall first consult the concerned Panchayat, Municipality, District/Village Council at village level or ward level in the affected area to carry out SIA study. SIA shall assess the purpose of acquisition and estimate the affected families, gender, social group carry out analysis regarding impact on community properties, assets and infrastructure particularly roads, public transport, drainage, sanitation, sources of drinking water, sources of water for cattle, community ponds grazing land, plantations, public utilities electricity supply and health care facilities. The SIA agency shall also prepare a Social Impact Management Plan (SIMP) listing ameliorative measures required for addressing the likely impact vis-à-vis intended benefit of the project. The SIA report and SIMP shall be subject to public hearing in the affected area after giving adequate publicity for the venue, time etc to ascertain the views of affected families/communities which shall be included in the SIA. The final SIA report shall be published including its translation in local language and shall also be made available to Panchayats, District/Village Councils & Deputy Collector/District Magistrate office for wider circulation. Detailing of the same is provided below:
 - (i) the prior consent of the concerned Gram Sabha or the Panchayats or the autonomous District Councils at the appropriate level in Scheduled Areas under the Fifth Schedule to the Constitution, as the case may be, shall be obtained in all cases of land acquisition in such areas, before issue of a notification under this Act, or any other Central Act or a State Act for the time being in force.
 - (ii) Provided that the consent of the Panchayats or the Autonomous Districts Councils shall be obtained in cases where the Gram Sabha does not exist or has not been constituted.
 - (iii) In the case of a project involving land acquisition on behalf of a Requiring Body which

involves involuntary displacement of the Scheduled Castes or the Scheduled Tribes families, a Development Plan shall be prepared in such a form as may be prescribed. laying down the details of procedure for settling land rights due, but not settled and restoring titles of the Scheduled Tribes as well as the Scheduled Castes on the alienated land by undertaking a special drive together with land acquisition. This plan is targeted at both SCs and STs, but, for the current purpose, it is referred to as Tribal People Development Plan (TPDP) and contents of such a Development Plan are provided at the end.

- (iv) the TPDP also contain a program for development of alternate fuel, fodder and non-timber forest produce resources on non-forest lands within a period of five years sufficient to meet the requirements of tribal communities as well as the Scheduled Castes.
- (v) In the case of land being acquired from the members of the Scheduled Castes or the Scheduled Tribes, at least one-third of the compensation amount due shall be paid to the affected families initially as first instalment and the rest shall be paid after taking over of the possession of the land.
- (vi) The affected families of the Scheduled Tribes shall be resettled preferably in the same Scheduled Area in a compact block so that they can retain their ethnic, linguistic and cultural identity.
- (vii) The resettlement areas predominantly inhabited by the Scheduled Castes and the Scheduled Tribes shall get land, to such extent as may be decided by the appropriate Government free of cost for community and social gatherings.
- (viii) Any alienation of tribal lands or lands belonging to members of the Scheduled Castes in disregard of the laws and regulations for the time being in force shall be treated as Null and void. and in the case of acquisition of such lands, the rehabilitation and resettlement benefits shall be made available to the original tribal land owners or land owners belonging to the Scheduled Castes.
- (ix) The affected Scheduled Tribes. other traditional forest dwellers and the Scheduled Castes having fishing rights in a river or pond or dam in the affected area shall be given fishing rights in the reservoir area of the irrigation or hydel projects.
- (x) Where the affected families belonging to the Scheduled Castes and the Scheduled Tribes are relocated outside of the district. then they shall be paid an additional 25% rehabilitation and resettlement benefits to which they are entitled in monetary terms along with a one-time entitlement of Rs. 50,000/-.
- (xi) All benefits, including the reservation benefits available to the Scheduled Tribes and the Scheduled Castes in the affected areas shall continue in the resettlement area.
- (xii) Whenever the affected families belonging to the Scheduled Tribes who are residing in the Scheduled Areas referred to in the Fifth Schedule or the tribal areas referred to in the Sixth Schedule to the Constitution are relocated outside those areas, than, all the statutory safeguards. entitlements and benefits being enjoyed by them under this Act shall be extended to the area to which they are resettled regardless of whether the resettlement area is a scheduled Area referred to in the said Fifth Schedule or a tribal area referred to in the said Sixth Schedule. or not.
- (xiii) Where the community rights have been settled under the provisions of the Scheduled 'tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006. The same shall be quantified in monetary amount and be paid to the individual conceded who has been displaced.

Following entitlement matrix shall be the basis for providing compensation and compatible R&R measures for tribal peoples:

COMPENSATION & R&R ENTITLEMENTS FOR LAND ACQUISITION

A. Comprehensive Compensation Package		
Eligibility for Entitlement	Provisions	
The affected families	Determination of Compensation:	
• Land Owners: includes any person-	4. Market value of the land	
v) whose name is recorded as (he owner of the land or building or part thereof, in the records of the authority concerned; or vi) any person who is granted forest rights under the Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006 or under any other	 as specified in the Indian Stamp Act, 1899 or the average of the sale price for similar type of land situated in the village or vicinity, or consented amount of compensation as agreed in case of acquisition of lands for private companies or for public private partnership project. whichever is higher Market value x Multiplier* between 1 to 2 in rural areas only (No multiplier in urban areas). 	
or vii) who is entitled to be granted	5. Value of the assets attached to land:	
Patta rights on the land under any law of the State including assigned lands:	Building/Trees/Wells/Crop etc. as valued by relevant govt. authority;	
or	Land compensation = 1+2	
viii) any person who has been	6. Solatium: 100% of total compensation	
declared as such by an order of the court or Authority;	Total Compensation : 1+2+3	

(*) Precise scale shall be determined by the State Govt.

The indicative values of multiplier factor based on distance from urban areas as provided in the act.

Radial Distance from Urban area (Km)	Multiplier Factor
0-10	1.00
10-20	1.20
20-30	1.40
30-40	1.80
40-50	2.00

B. R&R Package

Elements of Rehabilitation and Resettlement Entitlements for all the affected families (both land owners and the families whose livelihood is primarily dependent on land acquired) in addition to compensation provided above

Sl. No.	Elements of R& R Entitlements	Provision
1.	Subsistence grant/allowance for displaced families	Rs. 3000 per month per family for 12 months
2.	The affected families shall be entitled to:	 d. Where jobs are created through the project, mandatory employment for one member per affected family; or e. Rupees 5 lakhs per family;

		f. Rupees 2000 per month per family as annuity for 20 years, with appropriate index for inflation; The option of availing (a) or (b) or (c) shall be that of the affected family
3.	Housing units for displacement: iii) If a house is lost in rural areas: iv) If a house is lost in urban areas	 iii. A constructed house shall be provided as per the Indira Awas Yojana specifications. iv. A constructed house shall be provided, which will be not less than 50 sq. mts. in plinth area. In either case the equivalent cost of the house may also be provided in lieu of the house as per the preference of the project affected family. The stamp duty and other fees payable for registration of the house allotted to the affected families shall be borne by the Requiring Body.
4.	Transportation cost for displaced families	Rs 50,000/- per affected family
5.	Resettlement Allowance (for displaced families)	Onetime Rs 50,000/- per affected family
6.	Cattle shed/ petty shop cost	Onetime financial assistance as appropriate for construction as decided by St. Govt. subject to minimum of Rs.25,000/-
7.	Artisan/small traders/others (in case of displacement)	Onetime financial assistance as appropriate as decided by St. Govt. subject to minimum of Rs.25,000/-

Special Provisions for SCs/STs

In addition to the R&R package, SC/ST families will be entitled to the following additional benefits:

- 8. One time financial assistance of Rs. 50,000 per family;
- 9. Families settled outside the district shall be entitled to an additional 25% R&R benefits;
- 10. Payment of one third of the compensation amount at very outset;
- 11. Preference in relocation and resettlement in area in same compact block;
- 12. Free land for community and social gatherings;
- 13. In case of displacement, a Development Plan is to be prepared
- 14. Continuation of reservation and other Schedule V and Schedule VI area benefits from displaced area to resettlement area.

Consultations and Participation Framework

7. The World Bank OP 4.10 on Indigenous Peoples too emphasizes "a process of free, prior, and informed consultation with the affected tribal People's communities at each stage of the project, and particularly during project preparation, to fully identify their views and ascertain their broad community support for the project. To ensure peoples participation in the planning phase and aiming at promotion of public understanding and fruitful solutions of developmental problems various sections of project affected persons and other stakeholders were and will be engaged in consultations throughout the project planning and implementation stages. In this project, however,

it will go beyond consultations, as it is mandatory for the project to seek consent for all plans (SIMP and CPTD) from the Tribal Councils.

- 8. Public participation, consultation and information dissemination begins with initial phases of project preparation. Public consultation activities and information dissemination to PAPs and local authorities continues as the project preparation activities proceed in a project. Through respective local governments and civil society, PAPs are regularly provided with information on the project and the resettlement process prior to and during the project preparation and implementation stages. Information dissemination and consultations shall be a continuous process during preparation, implementation, Monitoring and Evaluation. The information dissemination and consultation with PAPs shall include but not be limited to the following:
 - (i) project description and its likely impacts,
 - (ii) objective of the surveys
 - (iii) entitlement provisions for different impacts.
 - (iv) Mechanisms and procedures for public participation and consultation
 - (v) Resettlement options
 - (vi) Grievance redress mechanisms and procedures
 - (vii) Tentative implementation schedule
 - (viii) Role and responsibilities of different actors
 - (ix) Preferences for mode of compensating for affected fixed assets
 - (x) Household consultations for skill improvement training, use of compensation amount and livelihood restoration
- 9. A detailed consultation and communication procedure placed at **Annexure-23** shall be used for each subproject as part of the TPDP. Some of the methods that can be used for the purpose of communication will include provisions of information boards, pamphlets distribution, wall paintings, drum beating, organizing meetings with key informants and village committees and opinion gathering through post cards, phones and Short Messaging services (SMSes). The GRM as detailed out in main document shall also be applicable without any discrimination for TPDF. The following information shall be included in the TPDP:
 - > Description followed by analysis of the social structure of the population.
 - > Inventory of the resources and analysis of the sources of income of the population
 - > Information about the systems of production practiced by tribals
 - Relationship of tribal groups to the proposed project
 - > Examination of land tenure issues including lands under customary rule and assurance of continued use of these resources by the groups involved.
 - > Strategy for local participation including mechanisms defined with the assistance and in consultation with tribal peoples for their participation in decision making process throughout project planning, implementation and evaluation cycle.
 - Summary of Public Consultation process.

- > Identification of development interventions or mitigation activities including measures to enhance tribal participation in the activities proposed under the project
- > An implementation schedule with benchmarks to assess progress
- > Monitoring and evaluation, including specific indicators
- > Detailed cost estimates/budget and financing plan and sources of funds for the TPDP covering planned activities.
- > Organisation support/ institutional capacity like the government institutions responsible for tribal development
- > Maps

Tribal Land Acquisition Process:

10. Land acquisition processes that need to be completed in a sequence has already been discussed in main ESPPF report and **Annexure-4**. However, special provisions as applicable to the lands acquisition in Tribal /scheduled areas are enumerated below:

S. No.	Aspects	Actions	Special provisions for tribal /Scheduled Areas
1	Preliminary Investigation for determination of Social Impact and public purpose.	Notification for the commencement of Social Impact assessment study to be made available in local language to concerned Panchayat/Municipality and to offices of district collector/subdivisional magistrate/tehsil (hereinafter referred to as local bodies)	As far as possible, no acquisition of land shall be made in the Scheduled Areas Where such acquisition does take place it shall be done only as a demonstrable last resort
		Consultation with the concerned Panchayat, Municipality or Municipal Corporation, as the case may be and carry out a social impact assessment (SIA) study	Land for traditional tribal institutions and burial and cremation grounds taken into consideration while conducting the SIA
		SIA study to be made public in manner specified in the Act Preparation of Social Impact Management Plan (SIMP)	In case of a project involving land acquisition /involuntary displacement of the Scheduled Castes or the Scheduled Tribes families, a Development Plan shall be prepared laying down the details of procedure for settling land rights due but not settled and restoring titles of the scheduled Tribes as well as the Scheduled Castes on the alienated land by undertaking a special drive together with land acquisition The Development Plan shall also contain a programme for development of alternate fuel, fodder and non-timber

		Public hearing for Social Impact Assessment (when	forest produce resources on non-forest lands within a period of five years sufficient to meet the requirements of tribal communities as well as the Scheduled Castes.
		prepared under section-4 of the act)	
2	Appraisal of SIA by expert group	SIA report is evaluated by an independent multi-disciplinary Expert Group, as may be constituted by appropriate Govt. Recommendations of the	
		expert group made available to the local bodies and in the affected areas in local language	
		The appropriate govt. would recommend the such area for acquisition after examining the expert group report (and report from the collector if any)	
3	Publication of preliminary notification	Notification (hereinafter referred to as preliminary notification) to that effect along with details of the land to be acquired in rural and urban areas shall be published (Notification to be issued within 12 months from DoA of SIA)	In case of acquisition or alienation of any land in the Scheduled Areas, the prior consent of the concerned Gram Sabha or the Panchayats or the autonomous District Councils, at the appropriate level in Scheduled Areas under the Fifth Schedule to the Constitution, as the case may be, shall be obtained. in all cases of land acquisition in such areas, including acquisition in case of urgency, before issue of a notification under this Act, or any other Central Act or a State Act for the time being in force.
		Immediately after issuance of the notification, the concerned Gram Sabhas at the village level, municipalities in case of municipal areas and the Autonomous Councils in case of the areas referred to in the Sixth Schedule to the Constitution, shall be informed of the contents of the notification issued under the said sub-section in all cases of land acquisition at a meeting called especially for this purpose.	

		After issuance of notice, the Collector shall, before the issue of a declaration under section 19, undertake and complete the exercise of updating of land records as prescribed within a period of two months. Preliminary survey of land Payment for damage (if any) during survey	
4	Preparation of Rehabilitation and Resettlement Scheme by the Administrator	Upon the publication of the preliminary notification by the Collector, the Administrator for Rehabilitation and Resettlement shall conduct a survey and undertake a census of the affected families	The affected families of the Scheduled
		The Administrator shall, based on the survey and census prepare a draft Rehabilitation and Resettlement Scheme (including time limit)	Tribes shall be resettled preferably in the same Scheduled Area in a compact block so that they can retain their ethnic, linguistic and cultural identity.
			The resettlement areas predominantly inhabited by the Scheduled Castes and the Scheduled Tribes shall get land, to such extent as may be decided by the appropriate Government free of cost for community and social gatherings.
			The affected Scheduled Tribes, other traditional forest dwellers and the Scheduled Castes having fishing rights in a river or pond or dam in the affected area shall be given fishing rights in the reservoir area of the irrigation or hydel projects.
		The draft Rehabilitation and Resettlement scheme referred to in sub-section (2) shall be made known locally by wide publicity in the affected area and discussed in the concerned Gram Sabhas or Municipalities	Frolesia.
		A public hearing shall be conducted in such manner as may be prescribed, after giving adequate publicity about the	Provided further that the consultation with the Gram Sabha in Scheduled Areas shall be in accordance with the provisions of the Provisions of the

		data time and vanua for the	Danahayata (Extansian to the Scheduled
		date, time and venue for the	` `
		public hearing at the affected	Areas) Act, 1996.
		area:	
		The Administrator shall, on	
		completion of public hearing	
		submit the draft Scheme for	
		Rehabilitation and	
		Resettlement along with a	
		specific report on the claims	
		and objections raised in the	
		public hearing to the Collector.	
		The Collector shall review the	
		draft Scheme submitted by the	
		Administrator with the	
		Rehabilitation and	
		Resettlement Committee at	
		the Rehabilitation project	
		level constituted under section	
		45:	
		The Collector shall submit the	
		draft Rehabilitation and	
		Resettlement Scheme with his	
		suggestions to the	
		Commissioner Rehabilitation	
		and Resettlement for approval	
		of the Scheme.	
		Approved Rehabilitation and	
		Resettlement Scheme to be	
		made public	
		Publication of declaration	
		and summary of	
		Rehabilitation and	
		Resettlement.	
5	Land to be	The Collector shall thereupon

NOW THE PORE the Commeter undersites to execute the Contract as per the Safety Plan as finitewes:

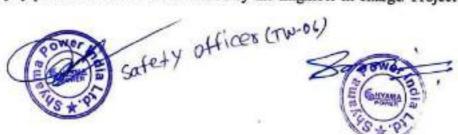

If IAAT the Contractor shall execute the works as per provisions of Bidding Documents including those in regard to 5 45th Procentional Provisions as per statutory requirements.

- 2. THAT the Contractor shall execute the works in a well- planned manner from the commencement of Contract as per agreed mile stones of work completion schedule so that planning and execution of construction works goes smoothly and consistently throughout the contract duration without handling pressure in last quarter of their financial year/ last months of the Contractor and the shall be finalized in association with POWERGRID Engineer In-charge/ Project Manager from time to time as required.
- 3. THAT the Contractor has prepared the safe work procedure for each activity i.e. foundation works including civil works, erection, stringing (as applicable), testing & commissioning, disposal of materials at site/ store etc. to be executed at site, which is enclosed at Annexure 1 A (SP) for acceptance and approval of Engineer In-charge/ Project Manager. The Contractor shall ensure that on approval of the same from Engineer In-charge/ Project Manager, the approved copies will be circulated to Employer's personnel at site (Supervisor(s) Executives(s)] and Contractor's personnel at site (Gang Leader, supervisor(s) etc.] in their local language/ language understood by gang.

THAT the Contractor has prepared minimum manpower deployment plan, activity wise as stated above, which is enclosed at Annexure- 1 B (SP) for approval of Engineer In-charge/ Project Manager.

- 4. THAT the Contractor shall ensure while executing works that they will deploy minimum 25% of their own experienced work force who are on the permanent roll of the Company and balance 75% can be a suitable mixed with the hired gangs/ local workers/ casual workers if required. The above balance 75% work force should be provided with at least 10 days training by the construction agencies at sites and shall be issued with a certificate. No worker shall be engaged without a valid certificate. Hired gang workers shall also follow safe working procedures and safety norms as is being followed by Company's workmen. It should also be ensured by the contractor that certified fitters who are climbing towers/ doing stringing operations can be easily identifiable with a system like issue of Badge/ Identification cards (ID cards) etc. Colour identification batches should be worn by the workers. Contractor has to ensure that inexperience workers/ unskilled workers should not be deployed for skilled job.
- 5.THAT the Contractor's Gang leader/ Supervisor/ Senior most member available at every construction site shall brief to each worker daily before start of work about safety requirement and warn about imminent dangers and precautions to be taken against the imminent dangers (Daily Safety Drill). This is to be ensured without fail by Contractor and maintain record of each gang about daily safety instructions issued to workers and put up to POWERGRID site-In-charge for his review and record.
- 6. THAT the Contractor shall ensure that working Gangs at site should not be left at the discretion of their Gang Leaders who are generally hired and having little knowledge about safety. Gang leader should be experienced and well versed with the safe working procedures applicable for transmission line/ Sub Station works. In case gang is having Gang Leader not on permanent roll of the Company then additional Supervisor from Company's own roll having thorough knowledge about the works would be deployed so as to percolate safety instructions up to the grass root level in healthy spirits. Contractor has to ensure close supervision while executing critical locations of transmission lines/ sub stations and ensures that all safety instructions are in place and are being followed.
- 7. THAT the Contractor shall maintain in healthy and working condition all kind of Equipments/ Machineries/ Lifting tools/ Lifting tackles/ Lifting gears/ All kind of Ropes including wire ropes/ Polypropylene ropes etc. used for Lifting purpose during execution of the Project and get them periodically examined and load tested for safe working load in accordance with relevant provisions and requirement of Building & other construction workers Regulation of Employment and Conditions of Services Act and Central Rule 1998, Factories Act 1948. Indian Electricity Act 2003 before start of the project. A register of such examinations and tests shall be properly maintained by the contractor and will be promptly produced as and when desired by the Engineer In-charge/ Project Manager or by the person

authorized by him. The Contractor has to ensure to give special attention on the formation / condition of eye splices of wire rope slings as per requirement of IS 2762 Specification for wire rope slings and sling legs.

THAT the Contractor has prepared a list of all Lifting machines, lifting Tools/ Lifting Tackles/ Lifting Gears etc. All types of ropes and Slings which are subject to safe working load is enclosed at **Annexure-2 (SP)** for review and approval of Engineer In-charge/ Project Manager.

8. THAT the Contractor has to procure sufficient quantity of Personal Protective Equipment (PPE) conforming to Indian/ International standards and provide these equipment to every workman at-site as per need and to the satisfaction of Engineer- In-charge/ Project Manager of POWERGRID. The Contractor's Site Supervisor/ Project Manager has to ensure that all workmen must use Personal Protective Equipment at site. The Contractor shall also ensure that Industrial Safety helmets are being used by all workmen at site irrespective of their working (at height or on ground). The Contractor shall further ensure use of safety shoes by all ground level workers and canvas shoes for all workers working at height. Rubber Gum Boots for workers working in rainy season and concreting job, Use of Twin Lanyard Full Body Safety harness with attachment of light weight such as aluminum alloy etc. and having features of automatic locking arrangement of snap hook, by all workers working at height for more than three meters and also for horizontal movement on tower shall be ensured by contractor. The Contractor shall not use ordinary half body safety harness at site. The Contractor has to ensure use of Retractable type fall arrestors by workers for ascending/ descending on suspension insulator string and other similar workers etc. Use of Mobile fall arrestor for ascending/ descending from tower by all workers. The contractor has to provide cotton/ leather hand gloves as per requirement, Electrical Resistance Hand gloves for operating electrical installations/ switches, face shield for protecting eyes while doing welding works and Dust masks to workers as per requirement. The Contractor shall also provide Reflective Jackets to all workmen working on the site including differently colored such Jackets to the persons working at height. The Contractor will have to take action against the workers not using Personal Protective Equipment at site and those workers shall be asked to rest for that day also their Salary be deducted for that day. POWERGRID may issue warning letter to Project Manager of contractor in violation of above norms.

THAT the Contractor shall prepare a detailed list of PPEs, activity wise, to commensurate with manpower deployed, which is enclosed at Annexure- 3 (SP) for review and approval of Engineer Incharge/ Project Manager. It shall also be ensured that the sample of these equipment shall be got approved from POWERGRID supervisory staff before being distributed to workers. The contractor shall submit relevant test certificates as per IS/International Standard as applicable to PPEs used during execution of work. All the PPE's to be distributed to the workers shall be checked by POWERGRID supervisory staff before its usage.

The Contractor also agrees for addition/ modification to the list of PPE, if any, as advised by Engineer Incharge/ Project Manager.

9. THAT the Contractor shall procure, if required sufficient quantity of Earthing Equipment/ Earthing Devices complying with requirements of relevant IEC standards (Generally IECs standard for Earthing Equipment's/ Earthing Devices are -855, 1230, 1235 etc.) and to the satisfaction of Engineer In-charges/ Project Manager and contractor to ensures to maintained them in healthy condition.

THAT the Contractor has prepared/ worked out minimum number of healthy Earthing Equipment with Earthing lead conforming to relevant IS/ European standards per gang wise during stringing activity/ as per requirement, which is enclosed herewith at Annexure- 4 (SP) for review and acceptance of Engineer – In- Charge/ Project Manager prior to execution of work.

- 10. THAT the Contractor shall provide communication facilities i.e. Walky- Talkie/ Mobile Phone. Display of Flags/ whistles for easy communication among workers during Tower erection/ stringing activity, as per requirement.
- 11. THAT the Contractor undertakes to deploy qualified safety personnel responsible for safety as per requirements of Employer/ Statutory Authorities.

THAT the Contractor employing more than 250 workmen whether temporary, casual, probationer, regular or permanent or on contract, shall employ at least one full time officer exclusively as qualified safety officer having diploma in safety to supervise safety aspects of the equipment and workmen who will coordinate with Engineer In-charge/ Project Manager/ Safety Coordinator of the Employer. In case of work being carried out through sub-contractors the sub-contractor's workmen/ employees will also be considered as the contractor's employees/ workmen for the above purpose. If the number of workers are less than 250 then one qualified safety officer is to be deployed for each contract. He will report directly to his head of organization and not the Project Manager of contractor. He shall also not be assigned any other work except assigning the work of safety. The curriculum vitae of such person shall be got cleared from POWERGRID Project Manager/ Construction staff.

The Contractor shall deploy one dedicated Safety Staff(s) for every 200 kms of a Transmission Line Project.

The name and address of such safety officer of contractor will be promptly informed in writing to Engineer In-charge with a copy to safety officer- In-charge before start of work or immediately after any change of the incumbent is made during the currency of the contract. The list is enclosed at Annexure – 5 A (SP).

THAT the Contractor has also prepared a list including details of Explosive Operator (if required). Safety Officer/ Safety Staff/ Safety supervisor/ nominated person for safety for each erection/ stringing gang, list of personnel trained in First Aid Techniques as well as copy of organization structure of the Contractor in regard to safety. The list is enclosed at Annexure – 5 B (SP).

- 12. The Project Manager shall have the right at his sole discretion to stop the work, if in his opinion the work is being carried out in such a way that it may cause accidents and endanger the safety of the persons and/ or property, and/ or equipment. In such cases, the Contractor shall be informed in writing about the nature of hazards and possible injury / accident and he shall comply to remove shortcomings promptly. The Contractor after stopping the specific work can, if felt necessary, appeal against the order of stoppage of work to the Project Manager within 3 days of such stoppage of work and decision of the Project Manager in this respect shall be conclusive and binding on the Contractor.
- 13. THAT, if, any Employer's Engineer/ supervisor at site observes that the Contractor is failing to provide safe working environment at site as per agreed Safety Plan / POWERGRID Safety Rule/ Safety Instructions/ Statutory safety requirement and creates hazardous conditions at site and there is possibility of an accident to workmen or workmen of the other contractor or public or the work is being carried out in an unsafe manner or he continues to work even after being instructed to stop the work by Engineer/ Supervisor at site/ RHQ/ Corp. Centre, the Contractor shall be bound to pay a penalty of Rs. 10,000/- per incident per day till the instructions are complied and as certified by Engineer/ Supervisor of Employer at site. The work will remain suspended and no activity will take place without compliance and obtaining clearance/ certification of the Site Engineer/ Supervisor of the Employer to start the work.
- 14. THAT, if the investigation committee of Employer observes any accident or the Engineer In-charge/ Project Manager of the Employer based on the report of the Engineer/ Supervisor of the Employer at site

Safety officers (TW-06)

observes any failure on the Contractor's part to comply with safety requirement/ safety rules/ safety standards/ safety instruction as prescribed by the Employer or as prescribed under the applicable law for the safety of the equipment, plant and personnel and the Contractor does not take adequate steps to prevent hazardous conditions which may cause injury to its own Contractor's employees or employee of any other Contractors or Employer or any other person at site or adjacent thereto, or public involvement because of the Contractor's negligence of safety norms, the Contractor shall be liable to pay a compensation of Rs. 10,00,000/- (Rupees Ten lac only) per person affected causing death and Rs. 1,00,000/- (Rupees One lac only) per person for serious injuries 25% or more permanent disability to the Employer for further disbursement to the deceased family/ injured persons. The permanent disability has the same meaning as indicated in Workmen's Compensation Act 1923. The above stipulations are in addition to all other compensation payable to sufferer as per workmen compensation Act/ Rules.

Notwithstanding above, the Contractor shall also be responsible for payment of sum as indicated below additionally which shall be deposited in Safety Corpus Fund pursuant to GCC Sub-Clause 18.3.3.26:

а	Upon 1stFatal Accident due to negligency by the Contractor	Rs. 50,00,000/-
b	Upon 2 nd Fatal Accident due to negligency by the Contractor	Rs. 75,00,000/-
e	Upon 3 rd Fatal Accident due to negligency by the Contractor	Rs. 1,00,00,000/-
d	Re-occurrence of Fatal Accident even after 3 rd Fatal Accident due to negligency by the Contractor	Rs. 1,00,00,000/- per fatal accident
e	Tower Collapse leading to more than one (01) death attributable to the Contractor as per the Accident Enquiry Committee Report	Rs. 1,00,00,000/- per fatal accident in addition to a,b,c or d above, as applicable

THAT as per the Employer's instructions, the Contractor agrees that this amount shall be deducted from their running bill(s) immediately after the accident. That the Contractor understands that this amount shall be over and above the compensation amount liable to be paid as per the Workmen's Compensation Act/ other statutory requirement/ provisions of the Bidding Documents.

15. THAT the Contractor shall submit Near- Miss- Accident report along with action plan for avoidance such incidence/ accidents to Engineer- In- charge/ Project Manager. Contractor shall also submit Monthly Safety Activities report to Engineer- In-charge/ Project Manager and copy of the Monthly Safety Activities report also to be sent to Safety- In-charge at RHQ of the Employer of his review record and instructions.

16. THAT the Contractor is submitting a copy of Safety Policy/ Safety Documents of its Company which is enclosed at Annexure- 6 (SP) and ensure that the Safety Policy and safety documents are implemented in healthy spirit.

17. THAT the Contractor shall make available of First Aid Box (Contents of which shall be as per Building & other construction workers (Regulation of Employment and Conditions of Services Act and Central Rule 1998/ POWERGRID Guidelines) to the satisfaction of Engineer In-Charge/ Project

Manager with each gang at site and not at camp and ensures that trained persons in First Aid Techniques with each gang before execution of work.

18. THAT the Contractor shall submit an 'Emergency Preparedness Plan' for different incidences i.e. Fall from height, Electrocution, Sun Stroke, Collapse of pit, Collapse of Tower, Snake bite, Fire in camp/ Store, Flood, Storm, Earthquake, Militancy etc while carrying out different activities under execution i.e. Foundation works including civil works, erection, stringing (as applicable), testing & commissioning, disposal of materials at site/ store etc. which is enclosed at Annexure- 7 (SP) for approval of the Engineer In-Charge/ Project Manager before start of work.

19. THAT the Contractor shall organize Safety Training Programs on Safety, Health and Environment and for safe execution of different activities of works i.e. Foundation works including civil works, erection, stringing (as applicable), testing & commissioning, disposal of materials at site/ store etc. for their own employees including sub-contractor workers on regular basis.

The Contractor, therefore, submits copy of the module of training program, enclosed at Annexure- 9 (SP), to Engineer In-charge/ Project Manager for its acceptance and approval and records maintained.

20. THAT the Contractor shall conduct safety audit, as per the Safety Audit Check Lists enclosed at Annexure- 8 (SP), by his Safety Officer(s) every month during construction of Transmission Lines/ Substations / any other work and copy of the safety audit report will be forwarded to the Employer's Engineer In-charge/ Site In-charge/ Project Manager for his comments and feedback. During safety audit, healthiness of all Personal Protective Equipment's (PPEs) shall be checked individually by safety officer of contractor and issue a certificate of its healthiness or rejection of faulty PPEs and contractor has to ensure that all faulty PPEs and all faulty lifting tools and tackles should be destroyed in the presence of POWERGRID construction staff. Contractor has to ensure that each gang be safety audited at least once in two months. During safety audit by the contractor, Safety officer's feedback from POWERGRID concerned shall be taken and recorded. The Employer's site officials shall also conduct safety audit at their own from time to time when construction activities are under progress. Apart from above, the Employer may also conduct surveillance safety audits. The Employer may take action against the person / persons as deemed fit under various statutory acts/ provisions under the Contract for any violation of safety norms/ safety standards.

- 21. THAT the Contractor shall develop and display Safety Posters of construction activity at site and also at camp where workers are generally residing.
- THAT the Contractor shall ensure to provide potable and safe drinking water for workers at site/ at camp.
- 23. THAT the Contractor shall do health checkup of all workers from competent agencies and reports will be submitted to Engineer In-Charge within fifteen (15) days of health checkup of workers as per statutory requirement.
- 24. THAT the Contractor shall submit information along with documentary evidences in regard to compliance to various statutory requirements as applicable which are enclosed at Annexure- 10 A (SP).

The Contractor shall also submit details of Insurance Policies taken by the Contractor for insurance coverage against accident for all employees are enclosed at Annexure- 10 B (SP).

25. THAT a check-list in respect of aforesaid enclosures along with Contractor's remarks, wherever required, is attached as Annexure -Check list herewith.

safety officer (TW-06)

Some indian

THE CONTRACTOR shall incorporate modifications/ changes in this 'Safety Plan' necessitated on the basis of review/ comments of the Engineer In-Charge/ Project Manager within fourteen (14) days of receipt of review/ comments and on final approval of the Engineer In-Charge/ Project Manager of the 'Safety Plan', the Contractor shall execute the works under the contract as per approved 'Safety Plan'. Further, the Contractor has also noted that the first progressive payment towards Services Contract shall be made on submission of 'Safety Plan' along with all requisite documents and approval of the same by the Engineer In-Charge/ Project Manager.

IN WITNESS WHEREOF, the Contractor has hereunto set its hand through its authorized representative under the common seal of the Company, the day, month and year first above mentioned.

i)	Under Workmen Compensation Act 1923 and Rules.	Yes	
ii)	Public Insurance Liabilities Act 1991	Yes	
lii)	Any Other Insurance Policies	No	

Safety plan

- 1. To ensure high degree of safety at all level of employees & workman no one is allowed to enter inside the construction site without safety shoes and safety helmet.
- 2. All contractor employees & worker medical certificate, address proof, 2 color photographs submitted to Shyama Power India Ltd. site office. -
- 3. No workmen are allowed to perform their duty with use of proper safety gadgets as per job requirement.
- Only approved type quality ISI Personal Protective Equipment (PPE) is being used at site.
- 5. Brief safety talk is being delivered by site engineer /Concerned Supervisor/Forman-before starting
- 6. Detail safety talk through Safety Meeting is being delivered by Safety officer at site twice in a week (on Monday Friday) before starting the job.
- 7. To ensure high degree of safety, excavations and openings are securely and adequate fenced/barricaded where ever required.
- 8. Proper means of access and egress are made with temporary railings and other practices being ensured as per requirement.
- 9. All electrical installation is fully protected. As per engineering standard double earthling are made for all welding machines, rectifiers etc.ISI marked rubber mat is used in base of each electrical shed. Danger board is hung in front of each shed. At least one fire extinguisher (especially DCP type) is made available in each shed.
- In any circumstance damage cable shall not be used for power supply.
- 11. Welding cable will be connected through lugs only.
- 12. Power supply for portable electrical switch board is being taken only through ELCB.
- 13. Three pin industrial type plug top is being used to tape off supply for electrical equipment.
- 14. Gas cylinder is being transported through trolley only.
- 15. Flash back arrester is being used for gas cutting set.
- 16. We are being ensured sufficient illumination at work place for safe working condition when natural light is not adequate for clear visibility. We are making special arrangement mainly during later hours.
- 17. To ensure good housekeeping dust bins are kept at suitable locations at site. A system to removal of unwanted materials from site is also being maintained.
- 18. Suitable number of fully maintained First Aid box is made available at site.
- 19. In any circumstance no material shall be dropped from height randomly. It should be lowered in a proper way.
- 20. We take serious action against safety violations immediately with a view that no one is above the
- 21. Wearing and anchoring of safety belt is compulsory for working above one point eight meter height. Safety net is being used as an additional protection to arrest the fall of man and material from height where ever required.
- 22. The work is being executed in presence of qualified/experience supervisors who has safety first in
- 23. A special arrangement to display safety posters/banners at suitable location of site is in progress.

PGCIL Transmission Line Tower Package: TW06, Manipur Portion safety officer (TW-06)

- 24. Fire extinguishers are placed in suitable location at site. A well maintained fire point with sand and water bucket is made available at site to face an unforeseen challenge.
- 25. All our tools and plants are in good condition.
- 26. All lifting tools and tackles are certified by competent person as a part of safety regulations.
- Only authorized personal holding relevant license will drive and operate site plant and equipment. Cranes, dumpers, Transport, vehicles etc.
- 28. All employees & contractor vehicles insurance paper & driver license etc. submitted to Shyama Power India Ltd. site office.
- 29. Only authorized personal are allowed to repair commission electrical equipment's.
- 30. Emergency telephone numbers, warning signs etc. are displayed at strategic places at site.
- 31. All scaffolding is of rigid construction. Suitable access and egress are made by using ladder, temporary stair cases etc. No make shift access such as oil drums or pullers are being allowed.
- 32. Nobody is allowed within the plant premises without gate pass.
- 33. Preparation of sign board giving the following information to display at site is in progress.
 - Name of contractor. (a)
 - Name of contractor's Site-in-Charge and telephone number. (b)

Shyama Power India Ltd.

Safety work procedure for each activity

1. Excavation

Do's

A competent person must inspect the excavation:

- At the start of each shift before the works begin
- After any event likely to have affected the stability of the excavation
- After any accidental fall of rock, earth or other material.
- The area to be excavated will be totally barricaded to prevent access ofpersonal.
- The location will also have "entry restriction" board displayed.
- The general earth work will be clearing of the site and removal to a debris yard.
- All safety measures relevant to excavation work will be ensured for the safety of work and personal.
- Ensure that work permit is obtained before start of work.
- Trenches, pits, holes which result from excavation will be filled with desert fill and later compacted. The edge will have a slope as desired.
- Ensure that deep excavation (more 1.5 m deep) and cave-in is protected by shoring.
- Earthwork machinery would avoid the use of existing road by construction oftemporarytracks for performing the work.
- The house keeping will be done on regular basis.
- The equipment and machinery used in excavation and filling will be checked for their safety performance.
- Heavy Earth moving Equipment's (HEME) will be checked for any fuel and oil leakages and unwanted emissions operators shall also use ear protection if required.

Don'ts

- Explosives will not be used for excavation unless approval is taken from safety department.
 - No excavated material will be allowed to get accumulated. The house keeping will be done regularly by housekeeping staff to keep the site clean.

2. Electrical work

Do's

- Ensure that availability of signage "High voltage". When working on High VoltageEquipment's.
- Ensure that testing instruments are set in adequate testing range.
- Lock out & tag out, permit to system to be implemented.
- Keep live line working to a minimum and avoid redundant testing.
- Use insulated hand tools & adequately insulated rubber hand gloves for maintenance and repairing work.
- Use adequately insulated rubber hand gloves.
- Ensure phase separation barriers are in position.
- Ensure Electrical & Mechanical inter locks.
- Canopy/shed shall be provided on the electrical panels.

Don'ts

- Do not use flexible wire as test lamp lead. Use adequately insulated rigid wires.
- Earthing and ELCB shall not be provided with panel board and DB.

3. Shuttering

- Skilled workman will be deployed for materiel Handling /Shifting.
- In lifting operation tag / guide rope to be used in case of lifting / shifting with crane / Hydra.
- · Only certified inspected /calibrated Equipment and authorized operator / person will be deployed.
- Dust Mask, Gloves, Ear plug to be ensured for concerned.
- Only trained person should be engaged for erection of shutter.
- The work should be carried out in close supervision.
- Unwanted and loose material to be removed immediately from the working platformand other will be stacked /stored properly.
- Close inspection will be carried out by execution and HS site personnel.
- Proper PPEs should be used during shuttering work.
- Training shall be given to all workers.
- Oil spillage shall be removed immediately.

safety officer (TW-06)

4. Batching Plant

- Ensure that hooks are not used during handling of cement bags.
- All personal handling equipment wears gloves/boots and nose mask.
- · Permit to work must be taken from safety department for cleaning/maintenance of mixingdrum/plant.
- Before starting the concreting, ensure that lock out/tag out system is in place.
- Ensure sprinkling of water in aggregate before starting the concreting.
- Transmit mixer must be filled with indicator horn, back horn back light.
- Driver must have proper license.

5. Concrete Work

- Ensure that formwork and shores used for concrete work are structurally safe and are properly braced or tied so as maintain the position and shape of the structure.
- The formwork structure used for concrete work has sufficient gangway and other secure access for inspection if the structure is in two or more tiers.
- Ensure that all machinery used are in perfect running condition and periodic maintenance is also being carried out noise exposure is to be kept to the minimum and ear protection is also tobe used as required.
- Ensure that there is no undesired spillage of concrete during the work in case spillage take place collect the same and dispose properly.
- Ensure that the personal wear the necessary PPE's such as Gum Boots, apart from mandatory PPE's.

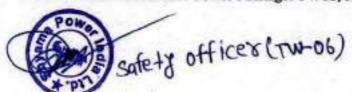

6. Working at height

Do's

- Specific supervisor shall supervise all WAH activity.
- Attendant must be a trained supervisor for critical job above 3m or trained worker for WAH job below 3 meter.
- Permit to be checked namely and properly displayed.
- Provided and ensure safe access and working platform for the working at height.
- Rope grip fall arrester shall be used if required.
- Cordon off the area below the working area for man movement.
- · Ensure no loose material on walking platform and all hand tools are suitably seemed to avoid its fall.

Don'ts

- Keeping loose material on the platform.
- Dropping of material from height should be strictly prohibited.
- Tying safety belt at lower elevation than the working level of person.

7. Arc Welding and Cutting

Do's

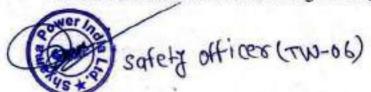

- The operator shall be properly trained and qualified to use the arc welder.
- Always use suitable handed gloves and welding screen during welding/cutting.
- Use only a suitable steel brush for removing slag from welded surface.
- The machine shall also be grounded and the grounding mechanism shall be periodically inspected.
- Operation and maintenance of the arc welding equipment shall be as per manufacture recommendations.
- · When electrode holders are not in use, they shall be placed so as not to make electrical contact with personal or conducting object.
- ELCB shall be provided with panel board and DB.
- Every metal body should be earthed.

Don'ts

- No welding during rainy season.
- Person should not stand on wet area during welding.
- Earthing cable not to be more than one meter away from the job.

Metal Scaffolds and Towers

- Ensure that metal scaffolds and towers are erected in accordance with the manufacturer's specifications and that the recommended load limits are not exceeded.
- Position metal scaffolds so that they will not come in contact with energized electrical conductor.
- Plumb and level all scaffolds and towers. Use rolling scaffolds only on firm, level and clean surface.
- Securely fasten all braces used in metal scaffolds.
- Cleat or secure scaffolds planking at both ends to prevent movement.
- Use a positive wheel-locking device to prevent all rolling scaffolds from accidentally moving while the scaffold is in use.
- Move all rolling scaffolds by applying force to the base only.
- Riding on rolling scaffolds while they are being moved is prohibited. Remove or secure all tools, materials, and equipment on the deck before moving the scaffolds.
- Do not allow the height of the work platform of the free standing scaffolds towers to exceed four times the smallest base dimension.
- Work only from scaffolds that have been approved and display a current signed scaffold permit.

9. Housekeeping

- Walkways, aisles, stairways, fire escapes and all other passageways shall be kept clear of all obstructions.
- Tools and material should not be placed where they may cause tripping of stumbling
- Hazards or where they may fall and strike anyone below.
- Puddles of oil and water create a slipping hazard and should be cleaned up promptly.
- Nails in board, such as those removed from scaffolds, forms and packing boxes,
- Constitute a hazard and should be removed. The boards should be carefully stacked or stored.
- Dirty and oily waste rags should be deposited in approved containers and disposed off
- As soon as practicable to avoid fire hazard.
- Broken light bulbs, glass metal and scarp and other sharp objects should be dumped in places or containers provided specially for them.
- Discarded fluorescent and other gas filled tubes shall be disposed of safely.

10. Lifting Operation

Do's

- Lifting area should be barricaded before starting the job.
- Operators' to make sure that crane/Hydra are positioned properly and angle of boom is proper for weight being lifted.
- Mobile crane/Hydra shall be operated by authorized operator and outriggers are provided with crane shall, shall be fully extended.
- Lifting material weight must be checked before lifting and good conditioned/rated lifting tools and tackles must be used with color coding.
- Competent and trained slinger/ Blanks man shall be deployed for the job and the crane must have limit switch.
- All lifting tools shall be provided with a safety latch and no equipment shall be used under high wind/ heavy rain or if the weather condition is so, which may deemed unsafe.
- All lifting appliances shall be provided with a fire Extinguisher.
- Lifting machineries equipment and lifting tackles shall not use without current test certificate.
- Limit switch & Boom positioning angle and level indicator.

Don'ts

- Damage slings.
- Unhook the sling under tension.
- Person should not stand below the lift load.

safety officer (TW-06)

11. Crane Operation

Do's

- All equipment shall be in good state, properly maintained and have the proper required certificates.
- All equipment drivers shall have the adequate training and certificates.
- Make sure that all the controllers are in 'Off' position closing the main switch.
- Never pick a load behind the capacity of the crane.
- Do not raise lower the crane hook whilst it is out of your site, unless it is being a directed by a
- . Do not allow the crane hook to rest in such that the rope become slack, stop the crane and
- While making any movement especially when rising are lowering the load, be sure that safety clear all the obstructions.
- Never allow any man to ride on an rope, sling or crane hook.

Don'ts

- Never use more than two controls at a time.
- Avoid the swinging the load.
- Avoid carrying the load over person on the floor.
- While carrying loads keep the load well clear of the men on the floor.
- Do not limit switch as a controller for the hoist.
- Never try to stop the crane travel by reversing the controllers.
- Never move the beyond the long travel limit by manipulating the controller.
- Before moving the crane using warning device.
- Never suddenly stop aload while lowering.

12. Lifting, Carrying and Hoisting

- Most lifting accidents are due to improper lifting methods rather than to lifting too heavy loads. When manually lifting heavy objects. Person should keep his back close to vertical and the lifting done with leg and arm thigh muscles rather than with back muscles.
- Bulky loads should be carried in such a way as to permit unobstructed view ahead.
- Pipes, conduits, reinforcing rods and other conducting material should not be carried on / above shoulders near exposed live electrical equipment or conductors in switchyards.
- · Rope tackle and sling, wherever required, should be checked to ascertain that they have sufficient strength to perform the work in hand.
- Chains hoists will not be used until their condition is known to be satisfactory care should be taken to avoid overstraining hoisting equipment. Chains should be inspected before use and at intervals during extended operations to avoid failure of worn or weakened links, hook or other
- No one shall stand or pass under any suspended load being handled by a crane, derrick or other hoisting equipment.
- Safe loads that can be lifted with various sizes of Nylon Manila and sisal ropes under different hitches are given in the attached chart. The values given are valid for undamaged ropes and when the loads are lifted with jerk.

GCIL Transmission Line Tower Package: TW06, Manipur Portion safety afficer (TW-06)

13. Testing & Commissioning

General Safety Rules for commissioning

1. Safety documentation system as per Shyama Power Electrical Risk Prevention with work permit system LOTO must be established before commissioning work is started. And ensure all men and materials, are removed and bus bar chambers are closed before Meggering.

Ensure proper earthing before Meggering / high potential test is carried out.

3. Check the bus bar configuration etc. in case a part of the panel is being energized. In some cases, manufacturers extend the bus bars of one section to the other section, to save adopter panels.

4. Ensure thorough checking before carrying out high potential test, area should be cordoned off

and suitable warning boards are to be provided.

Substation Grounding Practice

Use adequately insulated discharge rods with insulated wire for earth connections discharging the de-energized linerecognizing that three types of voltages, i.e. static, capacitive coupled and electromagnetic induced voltage can exist in disconnected line.

7. It requires additional physical work, as well additional time to adequately ground the work area

or equipment.

8. Ensure that connections are tight and adequate contact area is provided,

General Safety Rules for Testing

When testing and maintenance on substation equipment involving personal contact with conductors, which are normally energized and have been de-energized, the following procedures shall be adhered to:

Ground all applicable phase loads before test leads are connected.

Remove only those that would interfere with testing.

Upon completion of tests, grounds shall be reinstalled and test leads removed, in that order.

4. Remove all temporary ground connections, before closing source side isolator; close CB after isolator is closed.

MANPOWER DEPLOYMENT PLAN

Manpower will be deployed at the site according to the work execution plan depending upon the site conditions and climate. A specific number of workmen will be deputed for a particular job viz. civil and electrical in accordance to the safe and speedy execution of allotted work on daily basis. A summarized plan as given under-

ANNEXURE VII

Safety/ Penalty Provisions in Contract Condition

PC 21.3.4 Replace the word 'may' in line no. 10 with 'is'.

Addition of New Clauses (PC21.3.5, PC21.3.6) after GC 21.3.4

PC 21.3.5 Packing

The Contractor shall provide such packing of the Goods as it is required prevent their damage or deterioration during transit to their in destination as indicated in the Contract. The packing shall be sufficient withstand, without limitation, rough handling during transit exposure to extreme temperatures, salt and precipitation during transit and open storage. Packing case size and weights shall take consideration, where appropriate, the remoteness of the Goods found destination and the absence of heavy handling facilities at all points transit.

- PC 21.3.6 The packing, marking and documentation within and outside packages shall comply strictly with such special requirements as shall a expressly provided for in the Contract and, subject to any subsequent instruction ordered by the Employer consistent with the requirements of the Contract.
- PC 21.4 Replace the word 'materials' in line no. 2 with 'Plant and Equipment'.

Add the word 'including liabilities for port charges if any' after the word 'clearance' in line no. 3.

Addition of Sub-Clauses (PC22.2.3.1, PC22.2.3.2, PC22.2.3.3, PC 22.2.3.4) of GC 22.2.3

PC 22.2.3.1 Compliance with Labour Regulations

During continuance of the contract, the Contractor and his sub-contractors shall abide at all times by all applicable existing labour enactments and gules made thereunder, regulations notifications and byelaws of the State or Central Government or local authority and any other labour law (including rules), regulations bye laws that may be passed or notification that may be issued under any labour law in future either by the State or the Central Government or the local authority. The employees of the Contractor and the Sub-contractor in no case shall be treated as the

Packages NAG-DMS-01, NAG-DMS-02, NAG-DMS-03 & NAG-DMS-04 for Nagaland associated with NER Power System

employees of the Employer at any point of time.

- PC 22.2.3.2 The Contractor shall keep the Employer indemnified in case any action is taken against the Employer by the competent authority on account of contravention of any of the provisions of any Act or rules made thereunder, regulations or notifications including amendments.
- PC 22.2.3.3 If the Employer is caused to pay under any law as principal employer such amounts as may be necessary to cause or observe, or for non observance of the provisions stipulated in the notifications/byelaws/Acts/Rules/regulations including amendments, if any, on the part of the Contractor, the Employer shall have the right to deduct any money due to the Contractor under this contract or any other contract with the employer including his amount of performance security for adjusting the aforesaid payment. The Employer shall also have right to recover from the Contractor any sum required or estimated to be required for making good the loss or damage suffered by the Employer.
- PC 22.2.3.4 Salient features of some major laws applicable to establishments engaged in building and other construction works are indicated at Appendix-I to PC.

Addition of New Sub-Clauses (PC22.4.1 to 22.4.3 including its subclauses) of GC 22.4

PC 22.4.1 Protection of Environment

The Contractor shall take all reasonable steps to protect the environment on and off the Site and to avoid damage or nuisance to persons or to property of the public or others resulting from pollution, noise or other causes arising as consequence of his methods of operation.

During continuance of the Contract, the Contractor and his Subcontractors shall abide at all times by all existing enactments on environmental protection and rules made there under, regulations, notifications and bye-laws of the State or Central Government, or local authorities and any other law, bye-law, regulations that may be passed or notification that may be issued in this respect in future by the State or Central Government or the local authority.

Salient features of some of the major laws that are applicable are given below;

Packages NAG-DMS-01, NAG-DMS-02, NAG-DMS-03 & NAG-DMS-04 for Nagarand associated with NER Power System.
Improvement Project

The Water (Prevention and Control of Pollution) Act, 1974, This provides for the prevention and control of water pollution and the maintaining and restoring of wholesomeness of water. 'Pollution' means such contamination of water or such alteration of the physical, chemical of biological properties of water or such discharge of any sewage or trade effluent or of any other liquid, gaseous or solid substance into water (whether directly or indirectly) as may, or is likely to, create a nuisance or render such water harmful or injurious to public health or safety, or to domestic, commercial, industrial, agricultural or other legitimate uses, or to the life and health of animals or plants or of aquatic organisms.

The Air (Prevention and Control of Pollution) Act, 1981, This provides for prevention, control and abatement of air pollution. 'Air Pollution' means the presence in the atmosphere of any 'air pollutant', which means any solid, liquid or gaseous substance (including noise) present in the atmosphere in such concentration as may be or tend to be injurious to human beings or other living creatures or plants or property or environment.

The Environment (Protection) Act, 1986, This provides for the protection and improvement of environment and for matters connected therewith, and the prevention of hazards to human beings, other living creatures, plants and property. 'Environment' includes water, air and land and the inter-relationship which exists among and between water, air and land, and human beings, other living creatures, plants, micro-organism and property.

The Public Liability Insurance Act, 1991, This provides for public liability insurance for the purpose of providing immediate relief to the persons affected by accident occurring while handling hazardous substances and for matters connected herewith or incidental thereto. Hazardous substance means any substance or preparation which is defined as hazardous substance under Environment (Protection) Act, 1986, and exceeding such quantity as may be specified by notification by the Central Government.

PC 22.4.2

(i) The Contractor shall (a) establish an operational system of managing environmental impacts, (b) carry out all the monitoring and mitigation measures set forth in the environment management plan attached to the Particular Conditions as Appendix-II, and (c) allocate the budget required to ensure that such measures are carried out. The

Packages NAG-DMS-01, NAG-DMS-02, NAG-DMS-03 & NAG-DMS-04 for Nagaland associated with NER Power System Improvement Project Contractor shall submit to the Employer (quarterly) semiannual) reports on the carrying out of such measures.

- (ii) The Contractor shall adequately record the conditions of roads, agricultural land and other infrastructure prior to transport of material and construction commencement, and shall fully reinstate road / pathways, other local infrastructure and agricultural land to atleast their pre-project condition upon construction completion.
- (iii) The Contractor shall undertake detailed survey of the affected persons during transmission line alignment finalization under the Project, where applicable, and
- (iv) The Contractor shall conduct health and safety programme for workers employed under the Contract and shall include information on the risk of sexually transmitted diseases, including HIV/AIDS in such programs.

PC 22.4.3 Safety Precautions

PC 22.4.3.1 The Contractor shall observe all applicable regulations regarding safety on the Site.

Unless otherwise agreed, the Contractor shall, from the commencement of work on Site until taking over, provide:

- fencing, lighting, guarding and watching of the Works wherever required, and
- temporary roadways, footways, guards and fences which may be necessary for the accommodation and protection of Employer / his representatives and occupiers of adjacent property, the public and others.
- PC 22.4.3.2 The Contractor shall ensure proper safety of all the workmen, materials, plant and equipment belonging to him or to THE EMPLOYER or to others, working at the Site. The Contractor shall also be responsible for provision of all safety notices and safety equipment required both by the relevant legislations and the Engineer, as he may deem necessary.

Packages NAG-DMS-01, NAG-DMS-02, NAG-DMS-03 & NAG-DMS-04 for Nagaland associated with NER Power System Improvement Project

PC 22.4.3.3 The Contractor will notify well-in advance to the Engineer of his intention to bring to the Site any container filled with liquid or gaseous fuel or explosive or petroleum substance or such chemicals which may involve hazards. Engineer shall have the right to prescribe the conditions, under which such container is to be stored, handled and used during the performance of the works and the Contractor shall strictly adhere to and comply with such instructions. The Engineer shall have the right at his sole discretion to inspect any such container or such construction plant/equipment for which material in the container is required to be used and if in his opinion, its use is not safe, he may forbid its use. No claim due to such prohibition shall be entertained by the Owner and the Owner shall not entertain any claim of the Contractor towards additional safety provisions/conditions to be provided for/constructed as per the Engineer's instructions.

Further, any such decision of the Engineer shall not, in any way, absolve the Contractor of his responsibilities and in case, use of such a container or entry thereof into the Site area is forbidden by the Engineer, the Contractor shall use alternative methods with the approval of the Engineer without any cost implication to THE EMPLOYER or extension of work schedule.

PC 22.4.3.4 Where it is necessary to provide and/or store petroleum products or petroleum mixtures and explosives, the Contractor shall be responsible for carrying-out such provision and/or storage in accordance with the rules and regulations laid down in Petroleum Act 1934, Explosives Act, 1948 and Petroleum and Carbide of Calcium Manual published by the Chief Inspector of Explosives of India. All such storage shall have prior approval of the Engineer. In case, any approvals are necessary from the Chief Inspector (Explosives) or any statutory authorities, the Contractor shall be responsible for obtaining the same.

PC 22.4.3.5 All equipment used in construction and erection by Contractor shall meet Indian/International Standards and where such standards do not exist, the Contractor shall

ensure these to be absolutely safe. All equipment shall be strictly operated and maintained by the Contractor in accordance with manufacturer's Operation Manual and safety instructions and as per Guidelines/rules of THE EMPLOYER in this regard.

- PC 22.4.3.6 Periodical examinations and all tests for all lifting/hoisting equipment & tackles shall be carried-out in accordance with the relevant provisions of Factories Act 1948, Indian Electricity Act 1910 and associated Laws/Rules in force from time to time. A register of such examinations and tests shall be properly maintained by the Contractor and will be promptly produced as and when desired by the Engineer or by the person authorised by him.
- PC 22.4.3.7 The Contractor shall be fully responsible for the safe storage of his and his Sub-Contractor's radioactive sources in accordance with BARC/DAE Rules and other applicable provisions. All precautionary measures stipulated by BARC/DAE in connection with use, storage and handling of such material will be taken by the Contractor.
- PC 22.4.3.8 The Contractor shall provide suitable safety equipment of prescribed standard to all employees and workmen according to the need, as may be directed by the Engineer who will also have right to examine these safety equipment to determine their suitability, reliability, acceptability and adaptability.
- PC 22.4.3.9 Where explosives are to be used, the same shall be used under the direct control and supervision of an expert, experienced, qualified and competent person strictly in accordance with the Code of Practice/Rules framed under Indian Explosives Act pertaining to handling, storage and use of explosives.
- PC 22.4.3.10 The Contractor shall provide safe working conditions to all workmen and employees at the Site including safe means of access, railings, stairs, ladders, scaffoldings etc. The scaffoldings shall be erected under the control and supervision of an experienced and competent person. For erection, good and standard quality of material only shall

Packages NAG-DMS-01, NAG-DMS-02, NAG-DMS-03 & NAG-DMS-04 for Nagatard associated with NER Power System

_be used by the Contractor.

- PC 22.4.3.11 The Contractor shall not interfere or disturb electric fuses, wiring and other electrical equipment belonging to the Owner or other Contractors under any circumstances, whatsoever, unless expressly permitted in writing by THE EMPLOYER to handle such fuses, wiring or electrical equipment
- PC 22.4.3.12 Before the Contractor connects any electrical appliances to any plug or socket belonging to the other Contractor or Owner, he shall:
 - Satisfy the Engineer that the appliance is in good working condition;
 - Inform the Engineer of the maximum current rating, voltage and phases of the appliances;
 - c. Obtain permission of the Engineer detailing the sockets to which the appliances may be connected.
- PC 22.4.3.13 The Engineer will not grant permission to connect until he is satisfied that;
 - The appliance is in good condition and is fitted with suitable plug;
 - b. The appliance is fitted with a suitable cable having two earth conductors, one of which shall be an earthed metal sheath surrounding the cores.
- PC 22.4.3.14 No electric cable in use by the @ontractor/Owner will be disturbed without prior permission. No weight of any description will be imposed on any cable and no ladder or similar equipment will rest against or attached to it.
- PC 22.4.3.15 No repair work shall be carried out on any live equipment.

 The equipment must be declared safe by the Engineer and
 a permit to work shall be issued by the Engineer before
 any repair work is carried out by the Contractor. While
 working on electric lines/equipment, whether live or
 dead, suitable type and sufficient quantity of tools will
 have to he provided by the Contractor to

electricians/workmen/officers.

PC 22.4.3.16 The Contractors shall employ necessary number of qualified, full time electricians/electrical supervisors to maintain his temporary electrical installation.

PC 22.4.3.17 The Contractor employing more than 250 workmen whether temporary, casual, probationer, regular or permanent or on contract, shall employ at least one full time officer exclusively as safety officer to supervise safety aspects of the equipment and workmen, who will coordinate with the Project Safety Officer. In case of work being carried out through Sub-Contractors, the Sub-Contractor's workmen/employees will also be considered as the Contractor's employees/workmen for the above purpose.

The name and address of such Safety Officers of the Contractor will be promptly informed in writing to Engineer with a copy to Safety Officer-In charge before he starts work or immediately after any change of the incumbent is made during currency of the Contract.

PC 22.4.3.18 In case any accident occurs during the construction/
erection or other associated activities undertaken by the
Contractor thereby causing any minor or major or fatal
injury to his employees due to any reason, whatsoever, it
shall be the responsibility of the Contractor to promptly
inform the same to the Engineer in prescribed form and
also to all the authorities envisaged under the applicable
laws.

PC 22.4.3.19 The Engineer shall have the right at his sole discretion to stop the work, if in his opinion the work is being carried out in such a way that it may cause accidents and endanger the safety of the persons and/or property, and/or equipment. In such cases, the Contractor shall be informed in writing about the nature of hazards and possible injury/accident and he shall comply to remove shortcomings promptly. The Contractor after stopping the specific work can, if felt necessary, appeal against the order of stoppage of work to the Engineer within 3 days

of such stoppage of work and decision of the Engineer in this respect shall be conclusive and binding on the Contractor.

PC 22.4.3.20 The Contractor shall not be entitled for any damages/compensation for stoppage of work due to safety reasons as provided in para GCC 22.4.3.19 above and the period of such stoppage of work will not be taken as an extension of time for completion of work and will not be the ground for waiver of levy of liquidated damages.

PC 22.4.3.21 It is mandatory for the Contractor to observe during the execution of the works, requirements of Safety Rules which would generally include but not limited to following:

Safety Rules

- a) Each employee shall be provided with initial indoctrination regarding safety by the Contractor, so as to enable him to conduct his work in a safe manner.
- b) No employee shall be given a new assignment of work unfamiliar to him without proper introduction as to the hazards incident thereto, both to himself and his fellow employees.
- Under no circumstances shall an employee hurry or take unnecessary chance when working under hazardous conditions.
- d) Employees must not leave naked fires unattended. Smoking shall not be permitted around fire prone areas and adequate fire fighting equipment shall be provided at crucial location.
- Employees under the influence of any intoxicating beverage, even to the slightest degree shall not be permitted to remain at work.

- f) There shall be a suitable arrangement at every work site for rendering prompt and sufficient first aid to the injured.
- g) The staircases and passageways shall be adequately lighted.
- h) The employees when working around moving machinery, must not be permitted to wear loose garments. Safety shoes are recommended when working in shops or places where materials or tools are likely to fall. Only experienced workers shall be permitted to go behind guard rails or to clean around energized or moving equipment.
- The employees must use the standard protection equipment intended for each job. Each piece of equipment shall be inspected before and after it is used.
- Requirements of ventilation in underwater working to Licenced and experienced divers, use of gum boots for working in slushy or in inundated conditions are essential requirements to be fulfilled.
- k) In case of rock excavation, blasting shall invariably be done through Licenced blasters and other precautions during blasting and storage/transport of charge material shall be observed strictly.

PC 22.4.3.22 The Contractor shall follow and comply with all THE EMPLOYER Safety Rules, relevant provisions of applicable laws pertaining to the safety of workmen, employees, plant and equipment as may be prescribed from time to time without any demur, protest or contest or reservations. In case of any discrepancy between statutory requirement and THE EMPLOYER Safety Rules referred above, the latter shall be binding on the Contractor unless the statutory provisions are more stringent.

PC22.4.3.23 If the Contractor fails in providing safe working

environment as per THE EMPLOYER Safety Rules or continues the work even after being instructed to stop work by the Engineer as provided in para GCC 22.4.3.19 above, the Contractor shall promptly pay to THE EMPLOYER, on demand by the Owner, compensation at the rate of Rs.5, 000/- per day of part thereof till the instructions are complied with and so certified by the Engineer. However, in case of accident taking place causing injury to any individual, the provisions contained in para GCC 22.4.3.24 shall also apply in addition to compensation mentioned in this para.

PC 22.4.3.24

If the Contractor does not take adequate safety precautions and/or fails to comply with the Safety Rules as prescribed by THE EMPLOYER or under the applicable law for the safety of the equipment and plant or for the safety of personnel or the Contractor does not prevent hazardous conditions which cause injury to his own employees or employees of other Contractors or THE EMPLOYER employees or any other person who are at Site or adjacent thereto, then the Contractor shall be responsible for payment of a sum as indicated below to be deposited, with THE EMPLOYER, which will be passed on by THE EMPLOYER to such person or next to kith and kin of the deceased:

a.	Fatal injury or accident causing death	Rs. 1,000,000/- per person
b.	Major injuries or accident causing 25% or more permanent disablement	Rs. 100,000/- per person

Permanent disablement shall have same meaning as indicated in Workmen's Compensation Act. The amount to be deposited with THE EMPLOYER and passed on to the person mentioned above shall be in addition to the compensation payable under the relevant provisions of the Workmen's Compensation Act and rules framed there under or any other applicable laws as applicable from time to time. In case the Contractor does not deposit the above mentioned amount with THE EMPLOYER, such

amount shall be recovered by THE EMPLOYER from any monies due or becoming due to the Contractor under the contract or any other on-going contract.

PC22.4.3.25

If the Contractor observes all the Safety Rules and Codes, Statutory Laws and Rules during the currency of Contract awarded by the Owner and no accident occurs then THE EMPLOYER may consider the performance of the Contractor and award suitable 'ACCIDENT FREE SAFETY MERITORIOUS AWARD' as per scheme as may be announced separately from time to time.

PC22.4.3.26

The Contractor shall also submit 'Safety Plan' as per proforma specified in Section IX: Contract Forms, Part-3 of Bidding Documents alongwith all the requisite documents mentioned therein and as per check-list contained therein to the Engineer In-Charge for its approval within 60 days of award of Contract.

Further, one of the conditions for release of first progressive payment / subsequent payment towards Services Contract shall be submission of 'Safety Plan' alongwith all requisite documents and approval of the same by the Engineer In-Charge.

PC 22.6 Emergency Work (GC Clause 22.6)

Replace the words "Otherwise" with "In case such work is not in the scope of the Contractor", in the second last line of second paragraph of GC clause 22.6.

PC 23.3 Supplementing sub-clause GC 23.3

For notification of testing, four weeks shall be deemed as reasonable advance notice.

PC 23.7 Test and Inspection (GC Clause 23.7)
